CHARLES WALTER KINLOCH, ESQUIRE, C. S.

JULY 1851.

00108397

PUBLISHED BY ORDER

OF

THE HONORABLE THE LIEUTENANT GOVERNOR,

North-Western Provinces.

LIBRARY OF THE BOMBAY BRANCH OF THE ROYAL ASIATIC SOCIETY

Cx-g-21

Calcutta:

F. CARBERY, BENGAL MILITARY ORPHAN PRESS.

1852.

FROM C. W. KINLOCH, ESQUIRE,
Collector and Magistrate of Futtehpore,

To J. THORNTON, ESQUIRE,
Secretary to Govt. N. W. P., Agra.

SIR,

In conformity with the instructions communicated in the Memorandum of Government, circulated with your letter No. 4,302, dated 28th of September 1844, I have the honor to submit a Statistical Report upon the District under my charge.

2. I had expected to have submitted this Report at the close of 1848, but an unusual press of official business during that year, and my subsequent absence from India in 1849, have tended to delay the completion of the work until the present time.

3. In treating of the various subjects embraced in the Report, I have endeavoured to follow, as far as possible, the arrangement adopted by Mr. Montgomery in his Report of the District of Cawnpore, and whenever practicable, I have employed Tabular Forms exactly identical with those employed by Mr. Montgomery, in order that the accuracy of the entries made therein, in addition to other means for their verification, might be further tested by a comparison with Returns of a similar description from a neighbouring District.

I have the honor to be,
SIR,
Your most obedient Servant,

C. W. KINLOCH,
Collector and Magistrate.

FUTTEHPORE,
7th July, 1851.

TABLE OF CONTENTS.

REPORT.

	Paras.
Introductory Remarks,.....	1 to 4
Sketch of the Past History of the District, ...	5 to 8
Latitude and Longitude, Present Extent of the District, Aspect, Soils, ...	9 to 13
Principal Products, Prices of Agricultural Produce, Agriculture, its various processes, including the Cultivation of Sugar-cane, ...	14 to 51
Rivers, Streams, Climate, ...	52 to 56
Unhealthy Position of the Town of Futtehpore, objectionable Site of the Civil Station,	57 to 59
Meteorological Register for 1850-51, Distribution of the Population in 1848, ...	60 to 66
Coins, Silver and Copper, current in the District, ...	67
Weights and Measures, Banking Operations, Borrowing and Lending of Money, Mortgages, and Pawns, ...	68 to 89
Manufactures, ...	90 to 94
Magisterial, ...	95 to 133
Jail, ...	134 to 139
Revenue, the Errors of our earlier Administration and the Remedies applied to correct those Errors, ...	140 to 158
Settlement Proceedings, Severity of Mr. Timins' Assessment, Subsequent Revision by Mr. J. Thornton, Satisfactory Working of the Settlement since the Revision by the latter Officer, ...	159 to 175
Receipts and Disbursements of the Government Treasury, Treasury Duties, ...	176 & 177
Stamps, ...	178
Roads, Road Committee, their Operations during the last 10 years, Traffic upon the Grand Trunk Road, Imports and Exports, ...	179 to 185
Education, Revenue Officers. Record Office, Statement of Business transacted in the Collector's Office, ...	186 to 192
Tenures, former and present states of Zemindaree Possession, ...	193 to 208
Abkaree, ...	209 to 215
Judicial, ...	216 to 231
Introductory Remarks regarding the Pergunnahs, ...	232
History of Pergunnah Kora, ...	233 to 250
Ditto ditto Bindkee, ...	251 to 267
Ditto ditto Tuppehjar, ...	268 to 284
Ditto ditto Kooteah-Gooneer, ...	285 to 298
Ditto ditto Futtehpore, ...	299 to 320
Ditto ditto Huswa, ...	321 to 336
Ditto ditto Ghazeepore, ...	337 to 361
Ditto ditto Ayah Sar, ...	362 to 374
Ditto ditto Matour,...	375 to 391
Ditto ditto Ekdillah, ...	392 to 414
Ditto ditto Dhata, ...	415 to 429
Ditto ditto Hutgaon, ...	430 to 461
Ditto ditto Kotlah, ...	462 to 477

APPENDIX.

No.

1. Mr. T. W. Seyers' Report on the Opium Transactions of the Futtehpore District.
2. District Produce Statement.
3. Average Statement of Price Current of Grain, &c., from 1830 to 1850.
4. Statement showing the different kinds of Boats in use on the Ganges and Jumna.
5. List of Joint Magistrates stationed at Bhitorah.
6. Sketch Map of the Thannah Divisions.
7. Statement of Crimes from 1835 to 1849.
8. Statement of Commitments from 1835 to 1849.
9. Statement showing the Time occupied in the Disposal of the Criminal Work from 1846 to 1850.
10. List of Magisterial Officers appointed to the Futtehpore District.
11. Sketch of the Futtehpore Jail.
12. Civil Surgeon's Report.
13. Jumma Wasil-Bakee; or, Account of Demands, Collections and Balances of Land Revenue from 1234 to Khurreef of 1257 Fuslee.
14. Statement of Domands, Collections, and Balances of Tuccavee, from 1234 to end of 1850-51.
15. Statement of Receipts on account of Stamps.
16. Statement of Road Fund Receipts and Disbursements, from 1840 to December 1850.
17. Statement of Traffic, &c., on the Grand Trunk Road, from 15th November 1850 to 16th November 1851.
18. Statement of Imports, Exports, and Consumption of the Futtehpore District.
19. Report on the Native Schools of Futtehpore, by W. Muir, Esq., C. S.
20. List of Revenue Officers appointed to the Futtehpore District.

20 (A.) Statement of the Business of the Collectorship for 1849-50.

21. Statement of Receipts on account of Land Revenue and other Collections and the Expenses of the Civil Offices in the Futtehpore District, with Percentage of Charges on Receipts from 1826-27 to 1850-51.
22. Statement showing the Tenures of Estates.
23. Statement showing the Mutations of Landed Property since the Cession.
24. Statement showing the number of Estates held by Mahajuns.
25. Statement showing the average Amount of Land held by each Proprietor and Cultivator and the average Amount of Assessment paid by each Proprietor.
26. Abstract Statement of Public and Private Sales from 1844-45 to 1850-51.
27. Statement of the Number and Names of the different Agricultural Classes, according to the Census taken in 1848.
28. Sketch Map of the Tehseeldaree Divisions.
29. Statement of Demands, Collections, and Balances on account of Abkaree, &c., from 1826-27 to 1850-51.
30. Sketch Map of the Moonsiffee Divisions.
31. Detailed Statement of different kinds of Original Suits instituted before the European and Native Judges of Futtehpore, from 1837 to 1849.
32. List of Judges appointed to the Zillah Court of Futtehpore.

GOVT. LIBRARY OF THE BOMBAY BRANCH OF THE ASIATIC

STATISTICAL REPORT

OF THE

DISTRICT OF FUTTEHPORE.

1. The District of Futtehpore is a portion of the large tract of Country which was ceded to the East India Company under the Treaty that was concluded with Saadut Ali Khan, the Nuwab Wuzeer, on the 10th of November 1801, but it was not till twenty-five years after the accession of the present Government that it existed as an independent Zillah. From the cession until 1826, its Pergunnahs were included in the Districts of Allahabad and Cawnpore; the Revenue history of the District, therefore, during the first twenty-five years of our rule, may be considered as forming part of the Revenue history of those Zillahs.

2. But though the Revenue administration of the Futtehpore Pergunnahs, during the first twenty-five years of our rule, was entrusted to an Officer whose ordinary place of residence was distant upwards of 100 miles from many of the Villages of which he had charge, and notwithstanding the inconvenience of such an arrangement would seem to have been felt not only by the people themselves but by the governing power also, as may be gathered from the records of the period * referred to, yet it does not appear that the question of reducing the enormous jurisdictions of the Allahabad and Cawnpore Collectorates was ever seriously contemplated until the year 1825.

3. The necessity, however, for a better supervision in regard to matters of Police, would seem to have become sooner apparent, for by an order of Council dated the 8th of August 1814, it was resolved, with a view to the more effectual suppression of crimes and offences in the lower part of the Dooab, that the office of Register of the Civil Court of the District of Allahabad, be in future established at Futtehpore, and that, in addition to his Civil duties, the Register be invested with the powers of Joint Magistrate throughout the thannahs lying between the Towns of Kurrah and Kora Jehanabad.

4. The records of this office do not afford me the means of furnishing any account of the District, either in regard to its Fiscal or its Police history during the period that its affairs were administered by the Officers of the Allahabad and Cawnpore

* In a letter to the Joint Magistrate of Futtehpore, dated the 9th of June 1816, the Collector of Cawnpore writes as follows:

"It gives me great satisfaction to be able to state, that in consequence of the judicious measures adopted by you in detaching the troops, the whole of the Revenue of Pergunnah Amowlee has been realized with the exception of some balance which is due from the Village of Dehsorah."

Districts, and as a valuable Statistical account of the latter District has already appeared, and as it is not unlikely that a similar account of the Allahabad District may even now be in course of preparation, it appears to me that it would be but a waste of time to enter upon a detailed history of the Futtehpore Pergunnahs during the time they belonged to those Zillahs, more particularly as the whole of my information would require to be drawn from the record offices of those Districts, and in the end would probably prove to be but a recapitulation of matter which had already been treated of in the Statistical accounts of those Zillahs. For the above considerations, therefore, I propose to treat of the Futtehpore District from the period only of its separation from Cawnpore and Allahabad, commencing the account with a brief sketch of its previous condition when it formed part of the dominions of the Nuwab Wuzeer.

5. In 1759, Oude openly threw off its allegiance to the Government of Delhi; in 1765, its independence was formally recognized by the British power. At this period the Oude State comprised the two fertile Provinces of Allahabad and Oude, (the Province of Bareilly was subsequently acquired by the Nuwab Wuzeer in 1779.) In 1775, Benares was ceded to the British Government, and twenty-five years later the whole of the rich Province of Allahabad was also added to the Company's Dominions. This Province, at the period of the cession, comprised within its limits ten Sirkars or Sub-divisions. Out of two of those Sub-divisions, denominated Sirkar Kora and Sirkar Kurrah, was formed, twenty-five years afterwards, the modern District of Futtehpore—Kora contributed four Pergunnahs, and Kurrah nine. The names of the different Pergunnahs are given below:—

From Sirkar Kora.

1. Pergunnah Goonoor.
2. „ Kooteah.
3. „ Kora.
4. „ Kurrumpore Koonar-oorf-Bindkee.

From Sirkar Kurrah.

1. Pergunnah Ainjhee, now called Ghazeepore.
2. „ Ayah Sar.
3. „ Raree, now called Ekdillah.
4. „ Dhata.
5. „ Kotlah.
6. „ Koondah, now called Matour.
7. „ Futtehpore Huswa.
8. „ Hutgaon.
9. „ Huswa.

At the accession of the English Government, these two Sirkars were held in farm by Meer Almas Ali Khan: what amount of Revenue he paid for them it would not be easy to ascertain, as he held large farms besides in other parts of the Oude Territory, and one account was kept for the whole. Five of the above Pergunnahs, *viz.*, Pergunnahs "Futtehpore," "Huswa," "Ghazeepore," "Ayah Sar," and "Matour," were sub-let by him to his adopted son, "Hoosain Bux," and the remainder were rented by "Zain-oolabadeen Khan."

6. The power of the Nazim within the limits of his jurisdiction was absolute, both as regarded the collection of the Revenue and the administration of the Police. Under

such a system, in which the will of the ruler was the only law, and in which power was used only as an instrument of oppression, it could have excited no surprise to find the country a waste, and its inhabitants sunk in the lowest depths of misery and want. The Amil was required to pay his Revenue into the Government Treasury with undeviating punctuality, and as the Government never permitted the dictates of policy or any other consideration to interfere with the punctual discharge of its own claims, so, in like manner, did the Government lessee never suffer himself to be influenced by any motives of expediency, much less of humanity, in his demands upon the under-farmers; these again oppressed the cultivators; and whether the season was favorable, or whether it was unfavorable, the system of exaction only ceased when there was nothing left to wring from the groans of the ruined peasantry.

7. Under such a form of Government, there could be no security for person or property, and there was none. The Police existed in name only; persons, it was true, were nominated by the Nazim for the suppression of crime and for the administration of justice, but there was no regular system established for their guidance, no general principles inculcated, no rules prescribed, whereby they were to regulate their proceedings: each Officer, whether Foujdar or Kotwal, was tacitly suffered to follow the bent of his own inclination in the exercise of the authority that was delegated to him; it followed therefore, as a matter of course, that there was scarcely a crime, however atrocious,—scarcely an offence, however daring, which was not susceptible of adjustment through the medium of a bribe.

8. The above is no imaginary picture of the state of the country before the cession. Men are yet alive in almost every Village of this District who can bear testimony to its truth, and the earlier records of our Criminal Courts confirm the fact that previous to our rule there existed no check whatever to the commission of crime, and that the majesty of justice was degraded in being made an instrument only for the basest corruption and the most barefaced perjuries. The closer intercourse which the Treaty of 1801 tended to produce between our own Government and that of Oude, promised for a time to be of infinite advantage to the latter State, and had the successors of Saadut Ali Khan possessed the will or the power to imitate the example of that enlightened prince, we should not now have to deplore the complete anarchy which still characterizes the government of the Oude dominions.

9. The District of Futtehpore is situated between the 25th and 26th degrees of North latitude, and the 80th and 82nd parallels of East longitude. It is bounded on the North by the Ganges, on the South by the Jumna, on the East by the District of Allahabad, and on the West by the District of Cawnpore. It is 62½ miles in length and has an average breath of 25 miles, and it contains a superficial area of 1,553 square miles.

10. The aspect of the country is a level plain, interspersed with groves of the Mango and Mowah, the intervening spaces being filled with luxuriant grain crops and other products of the District. Towards the Jumna the vegetation is less rich, and the soil less productive. In this part of the District, large beds of Kunkur are of frequent occurrence, breaking the country into ravines, through which the accumulated water of the rainy season steadily makes its way, till it finds an outlet in the clear blue stream of the Jumna.

11. Extensive plains of *Oosur*, or waste land, are constantly met with in different parts of the District. These contain a large quantity of salt, carbonate and sulphate of soda, and nitrate of potash, and are useless therefore for purposes of cultivation; the only account to which the soil is turned is in the preparation of Saltpetre and the commoner kinds of salt.

12. The soil is generally fertile, particularly so in those parts where that rich sandy loam is found which forms so characteristic a feature in the surface-soil of this part of the country; from this soil the most luxuriant crops of Wheat and Barley are raised year after year. It is towards the close of February, before the Rubbee crops have attained maturity, that the District appears to the greatest advantage;—the aspect of the country at this time is marked by features of considerable natural beauty; the landscape, studded as it is with luxuriant mango groves, and covered on all sides with the richest crops, resembles one vast garden, upon which the rays of a tropical sun fall only with fertilizing effect, and over which the mild West wind passes only to ripen and mature.

13. There are several varieties of soil in the District, an account of which will be found below; the prevailing soil is the one called Seegoond:—

Statement of Soils.

No.	Name of Soil.	Colour of Soil.	Nature of Soil.
1.	Mutiyar, ..	Black, ..	This description of soil is chiefly found in the vicinity of the Jumna and Ganges; an average fall of rain penetrates to the depth of 4 inches; the earth is hard and clayey. This soil produces luxuriant crops of Wheat, Jowar, and Cotton.
2.	Domut, ..	Dark sandy loam, ..	The nature of this soil corresponds pretty closely with that of the Mutiyar, save that it is less clayey in its character, and has a mixture of sand in it. It is found near the rivers and also in the "oopoohar" lands. Rice crops are raised from it first, and afterwards gram is sown; both crops are produced of the finest description.
3.	Gobrah, ..	Black and white loam,	Is inferior to Mutiyar and Domut, and is softer and drier than those soils. It retains moisture to a less degree than the above. This mittee is not common; it is usually found in the vicinity of rivers.
4.	Rankur,, ..	Yellowish red soil, ..	There is a large proportion of kunkur in this soil, and it is consequently very hard. It is occasionally met with near the banks of rivers. Moth and Jowar are chiefly raised from it. It dries rapidly after rain, and is by no means a fertile soil.
5.	Seegoond, ..	Whitish soil,	This mittee is soft, and rain penetrates to the depth of six inches. It is a very prevalent soil in this district. The finest Rubbee crops are raised from it, particularly "Birra" (Barley Peas.)
6.	Pundoah, ..	Palish yellow, ..	This mittee is not unlike Seegoond, but inferior to it. Good Rubbee crops, however, are grown upon it.
7.	Barooah, ..	Yellowish white, ..	There is a good deal of sand in this soil. Rain penetrates to the depth of 9 inches, but it very quickly dries. Bajra is chiefly grown from this soil.
8.	Brejure, ..	White and red, ..	This mittee is excessively hard: there is no harder known. It is mostly found near tanks and jheels; if it be inundated with water, the water rarely affects it below the depth of 4 inches. This land is ploughed with great difficulty. *Rice is the* only grain grown upon this kind of soil.
9.	Kupsa or Kaber,..	White or black, ..	This soil cracks a good deal in the dry weather. A kind of coarse Rice is only sown on it.
10.	Bhoor or Bhoonda,	Whitish yellow, ..	This is a sandy soil, on which Moth, Bajra, and Jowar are cultivated, but the produce is small.
11.	Hada Beejur,	Blackish, ..	This is a hard soil, and it is only when there is a good deal of rain that it is cultivated, and then with Rice only.

14. The principal products are Rice, Cotton, Wheat, Barley and Gram, Birra (Barley and Peas), Jowar, Bajra, and Sugar-cane.

15. There are no less than twenty-one different kinds of Rice cultivated, five of which, known under the general term of "Shalee Khoord," are cut early in September, thus leaving the land available for a second or a Rubbee crop. These lands are called "Dofuslah," and the finest Wheat and other Rubbee crops are annually raised from them. The other fifteen kinds of Rice, termed "Shalee Kulan;" are of a more valuable description, and do not come to maturity until October and November.

16. Not less than 36,847 acres of land are annually cultivated with Rice, which, at an average of 10 maunds per acre, would yield 3,68,470 maunds as the gross annual produce of the rice cultivation of the district. Cotton, of which a large quantity is annually grown, is found in the greatest luxuriance in the neighbourhood of the Jumna. Sugar-cane is only met with in the better description of villages, and Indigo is almost unknown.

17. The cultivation of Opium had already been introduced into this part of the country before the formation of the Futtehpore Zillah. The management of the department was intrusted to the Revenue Collector, who, as Deputy Agent, received a salary of 200 Rupees a month and a certain percentage on the produce. The Opium operations, during the first ten years after its first introduction, were not encouraging. The Collectors found great difficulty in inducing parties to undertake the cultivation of the plant. Much of this unwillingness was doubtless attributable to the well-known dislike of the natives to innovation in any shape, to their dislike to enter upon an occupation of which they had no previous experience, and which would involve a departure from the particular mode of life to which they had hitherto been accustomed. After making every allowance, however, for the above causes, we must still seek for something further in explanation of the want of success that attended the earlier Poppy operations in this District. The great mistake was in imposing upon the Collector, already overburdened with the work of his own office, the supervision of a department to which he had not the leisure to attend. The natural consequence of this arrangement was that the department in question was neglected, and everything connected with it left in the hands of the gomashtahs, who availed themselves largely of the opportunity, thus afforded them, to plunder both their employers and the unfortunate Assamees. At length the necessity of a separate European supervision forced itself upon the Government, and in 1836 an Officer was nominated to the charge of the department under the designation of Sub-Agent. The wisdom of the measure has shown itself in the gradual advance of the cultivation, from 4,495 beegahs in 1834-35 to 6,237 in 1849-50.

18. Mr. Seyers, the present Sub-Agent, has obligingly favored me with a very interesting account of the Opium transactions from 1826 down to the present time. The Report will be found in the Appendix,* and I avail myself of the present opportunity to offer to this intelligent Officer my best acknowledgments for the valuable paper he has so kindly placed at my disposal.

---

* Appendix No. I.

19. A Statement will be found in the Appendix,* showing the quantity of land under each kind of crop in 1839 when the whole District came under measurement, preparatory to the revision of settlement under Regulation IX. of 1833. There was no estimate made at the time of settlement of the produce per acre of the different kinds of crops. This omission I have now supplied, but it has been a work of considerable labor. In estimating the produce per acre, regard has been paid not only to the description of the soil and the facilities that exist for irrigating it, but the character and caste and circumstances of the cultivator have been also considered, as likewise all other such points as might be deemed likely to exercise an influence on the cultivation of the land.

20. The value of the produce of each Pergunnah has been estimated on the average rates which have ruled in the several Pergunnahs during the three years, 1847-48, 1848-49, and 1849-50. An abstract of this Statement is given below :—

KHURREEF CROP.

	Joar (Holcus Sorghum.),	Bajra (Holcus Spicatus.)	Mukace (Zea-maize.)	Oord (Phaseolus Max.)	Muroon, (Cynosurus, Coracanus,) Kakoon, (Panicum Italicum,) Sawan, (Panicum Miliaceum.)	Moong.	Moth.	Kodor, (Paspalum Frumentaccum.)

Acres, ...	....	797	19	270	81,449	466	8	2,74,598	5,16,331
Estimated Value, Rs.	1,67,926	10,539	675	4,052	8,99,803	3,638	18,662	36,03,695	67,53,471

21. In the Appendix* will be found a Table showing the prices of every description of agricultural produce from the year 1830 down to the present time.

22. Mr. Montgomery, in his Report upon the Statistics of Cawnpore, has furnished a Statement of the probable expense of cultivating a farm of 13 beegahs, and the estimated produce and profits arising therefrom. A similar Statement has, by my direction, been prepared by each of the tehseeldars of this district. The statement given below is the average of the Returns received from the six tehseeldaries. It is reckoned that a farm of the above size can be worked by a single plough and a pair of serviceable bullocks, and the object of the Statement is to show how the land may be turned to the best account by an industrious agriculturist.

* Appendix No. III.

23. By the month of Jeyt, (June) the country on all sides is clear of cultivation. The agriculturist now proceeds to prepare his fields for the ensuing year's cultivation; his first step is to manure it. It is the practice for the Zemindars and Assamees of a village to collect in one spot in or near their village the dung of the village cattle, the decayed leaves of the neighbourhood, the sweepings of the houses, and whatever else is capable of being turned to account for the purpose of manure. The spot where the manure is collected is called "guhree" or "ghoora." The manure when acted upon by the sun and rain becomes quite black, and in this state it is called "pâns." It is taken to the field in the month of June, but with the exception of land intended for rice cultivation, which is manured every year, it is not customary to manure other lands more than once in two years. About 100 maunds of "pâns" is required to manure one beegah. The manure is distributed in heaps in different parts of the field, and is left to spread of itself, which it does so soon as the heavy rain sets in. The only item of expense attending manuring is the labour for the conveyance of the manure to the field, for it very rarely happens that a cultivator has to purchase manure.

24. Two labourers will manure one beegah of land in a day. Men are hired for the purpose from the month of Assar (July), and are paid at the rate of two Rupees a month. The cost of manuring land, therefore, falls at the rate of about two Annas a beegah. In addition to his two Annas the labourer receives also, in the shape of "jeorah," 1½ seer of grain, usually Birra or Jowar.

25. But should it so happen that a cultivator has no manure of his own, neither a cart nor bullocks to convey it to his field, he then buys what manure he may require, and hires a cart or carts to take it to the ground. From 80 to 100 maunds is the quantity required for one beegah, and this quantity can be conveyed on four carts. For each cart load that he may use the Assamee pays two Annas, and eight Annas for cart hire.

26. It takes two labourers to convey 80 maunds of manure from the village to the field, and each man receives one Anna for his day's labour. The account, therefore, will stand as below:—

Cost of manure for 1 beegah,	8	Annas.	
Cost of cart and bullocks,	8	„	
Labour,	2	„	
Total, Rupee	1	2	0

27. Another and very common mode of manuring land is by driving a flock of goats and sheep into a field and keeping it there during an entire night. It is usual to put the flock into the field in the evening and allow it to remain there until the first watch of the following day; this system, however, does not answer so well as manuring in the ordinary way with "pâns." One thousand sheep and goats are considered to form a complete flock, but the flocks in this part of the country seldom number more than 300, but this number suffices to manure one beegah of land. The price paid for manuring by this process is at the rate of five Annas and four Pies for each time the flock may be use. It is not usual to manure the same field by "pâns" and by this mode also, except the land be Sugar-cane.

28. After the land is manured, the field is ready for ploughing, and the Assamee only awaits a sufficient fall of rain to set his plough at work. If he have his own plough and bullocks, his only expense will be the labour of the man who tends the bullocks, which will cost him one Anna a day. If he should have to hire a plough and bullocks, the cost of the same and for labour will be at the rate of four Annas *per diem*.

29. The subjoined Table shows the number of times that each description of field is ploughed, as also the expense attending the process, both when the cultivator has his own plough and bullocks, and when he has not. One plough with a pair of serviceable bullocks will plough a beegah of land in the course of a day.

Statement showing the Number of Times each description of Field is Ploughed and Cost of the same.

1.	2.	3.	4.	5.
Name of Grain or article of Produce.	How many Times ploughed.	Expense of Ploughing. If Plough and Bullocks belong to the Assamee.	Expense of Ploughing. If Plough and Bullocks are hired.	Remarks.
		Rs. As. P.	Rs. As. P.	
Cotton and Hemp,.. ..	Once, ..	0 0 6	0 2 0	Urhur is rarely separately sown, when it is, one ploughing suffices.
Mukkra, .. Kakoon, .. Sawan,.. .. Mash, ... Moong ... .. Moth, ...	Twice, ..	0 1 0	0 4 0	
Bajra, ...	5 times,..	0 2 6	0 10 0	
Dhan, ...	6 times,..	0 3 0	0 12 0	
Gram, ... Peas, ...	4 times,..	0 2 0	0 8 0	
Wheat,.. .. Birra, ... Barley,... ..	12 times,.	0 6 0	1 8 0	These fields are ploughed more than any others, never less than 8, and sometimes as often as 32 times. A common test for determining whether a field has been sufficiently ploughed is to drop a ghurrah full of water upon the ground, if it does not break, the field is ready to receive the seed.
Sugar-cane.				
Til, ... Surson,... .. Ulsee, ... Urhur,. ..	.. ..	.. ..	.. ..	These grains are seldom or never separately sown. Til and Urhur are usually sown along with Jowar, Bajra and Surson and Ulsee are commonly sown along with Wheat, Birra, or Gram.

30. The next step that the agriculturist takes is to pulverize the ground by means of the "puhta." The "puhta" is simply a plank of wood which is drawn over the field either by bullocks or by manual labour, in order to pound the clods of earth into which the land has already been broken by the plough. In either case it is usual for one

man to stand upon the plank to indicate the direction the "puhta" should take, and to assist by his weight in pulverizing the clods over which the "puhta" has to pass.

31. The "puhta" is not employed for Rice cultivation, but in the case of every other Khurreef product it is employed at least twice.

32. As regards the Rubbee lands, when the rains have ceased, as they usually do in the month of Kowar (October), the practice is, after the first ploughing, to pass the "puhta" four times consecutively over the field, and once again after each subsequent ploughing; and when Wheat and Birra fields are ready for seed, it is a common practice to run the "puhta" eight or ten times over the land; and a good agriculturist will not sow until the ground is perfectly pulverized by means of this process. Of course the number of times a field may require to undergo the process will depend upon the character of the soil, whether it be hard or otherwise. The average number of times that a Rubbee khet requires the "puhta" is ten. It is a sure test that a field has been properly pounded when one can no longer trace the print of the bullocks' hoof in the earth.

33. After the seed is sown, recourse is again had to the "puhta" from two to four times, according to the state of the ground. The general practice is to employ upon each "puhta" four bullocks and two labourers, and occasionally only two bullocks and one labourer. In the former case, twenty beegahs can be prepared daily without difficulty. According to the usual rate of remuneration, if the "puhta" and bullocks belong to the owner of the field, the cost on one beegah of land would be 1¼ pice; and if the "puhta" and bullocks be hired, the cost per beegah would fall at the rate of 4¾ pice.

34. The subjoined statement shows the expense attending the "puhta" process, and the number of times it is usual to have recourse to it previous to sowing the grain of both harvests:—

Statement showing the Number of Times the Puhta is employed, and Cost attending the Process.

Name of Grain or Produce.	How many Times the Puhta is used.	The Expense attending the Process per Beegah.		Remarks.
		Cost of Labour.	Cost of Puhta, including Labour.	
		Rs. As. P.	Rs. As. P.	
Cotton, ... Jowar, ... Bajra, ... Makkra, .. Kakoon, .. Sawan, ... Moth, ... Moong, ..	Once, ..	0 0 1¼	0 0 4¾	In these fields, after the seed is sown, it is usual to have recourse to the "puhta" once; it is not the practice to employ it before sowing, because all these grains are sown in the beginning of the rains, when the ground is quite moist.
Rice, ...	18 times, ..	0 1 10½	0 7 1½	When Rice lands are required for a second or Rubbee crop, the "puhta" is constantly needed to remove the strong coarse grass which springs up along with the Khurreef crop; when no second crop is sown, the "puhta" is never employed.
Gram and Peas, ..	4 times, ..	0 0 5	0 1 7	

Name of Grain or Produce.	How many Times the Puhta is used.	The Expense attending the Process per Beegah.		Remarks.
		Cost of Labour.	Cost of Puhta, including Labour.	
		Rs. As. P.	Rs. As. P.	
Wheat,.. ..	30 times,..	0 3 1½	0 11 10½	In these fields, both the plough and the "puhta" are used very freely. From July to September the plough is constantly at work, and when the rains are over, the plough again sets to work, after which the "puhta" is freely employed to smooth and level the field. The "puhta" is not needed in the Turee lands near the Ganges and Jumna. These grains are not sown separately.
Birra, ...				
Barley,.. ..				
Til.				
Surson.				
Ulsee.				
Urhur.				
Sugar-cane.				

35. The next step is to commit the seed to the ground. The custom, as regards the Khurreef sowings, is to throw the seed from the hand on all four sides, and then to pass the plough over it. In the villages on the banks of the river it is not usual to plough before sowing. Fallow land is first ploughed, then sown, and then ploughed again, and this is the custom in the Ooperhar land also. One labourer, one plough, and two bullocks suffice for sowing the Khurreef grains, but for the Rubbee sowings, one plough, two bullocks, and two labourers are usually employed,—one man to guide the plough, and the other to sow the seed; it is not unusual, however, for one man to do both duties. Two beegahs are easily sown with one plough and two bullocks.

36. If the plough and bullocks should belong to the cultivator, his sole expense will be one labourer to assist him; for this labourer he has to pay, in the Khurreef, 6 pies per beegah; and if he should have to hire a plough and bullocks also, the expense will fall at the rate of two annas per beegah. In the Rubbee, if the cultivator have his own plough and cattle, his only expense will be one anna for a labourer per beegah; and if he should have to hire, the total expense to him would be two annas a beegah.

37. I annex a Statement showing the quantity of seed of the different kinds of produce required for the cultivation of one beegah of land, as also the expense attending the sowing of the same, including cost of seed:—

Statement showing the Quantity of Seed required for each description of Field, and its Cost.

Mash, ..	0 8	0 1 6	0 0 6	0 2 0	This grain is not often sown separately.
Sugar-cane.	.. .. ..	.. ..	.. ..	.. ..	This is treated of separately in paras. 50 and 51.

38. When the Khurreef crops have attained the height of about 6 inches, it is usual to commence weeding; the common "koorpee" is used for the occasion;—but Jowar and Bajra are allowed to attain the height of 1½ hath (2¼ feet:) the plough is then passed over the field, and in this way the weeds are eradicated. This process is called by the villagers "dundahree." There is no rule in regard to weeding Rubbee cultivation, as in consequence of the frequent ploughing which the Rubbee lands undergo, and the absence of continued rain during the cold season, the same necessity does not exist for weeding as is the case with the Khurreef. It is calculated that five men will weed one beegah in one day; the remuneration to each labourer is 2 pysa and 4 chittacks of churbun, or, if paid entirely in kind, 1¼ seer pukka weight of grain, and 4 chittacks of churbun. The latter is the more common mode of remuneration. The average cost of weeding one beegah is 4 annas and 2 pies.

39. A Statement is given below which shows the cost of weeding a beegah of land :—

Statement showing the Cost attending the Process of Weeding.

Name of Cultivation.	Number of Times weeded.	Cost of Weeding one Beegah at the rate of 4 Annas 2 Pies per each Weeding.	Remarks.
		Rs. As. P.	
Cotton, ..	3 times, ..	0 12 6	The weeds are very quickly extracted.
Jowar, .. Bajra, ..	Once, ..	0 4 2	After weeding, it is usual to pass the plough over this land.
Rice, ...	Twice, ..	0 8 4	The description called Beear is weeded three times; the Usairah is weeded only once. The average of the two is noted in column 3 of the Statement.
Hemp,.. ..	.. .. ..	.. .. ..	This field is never weeded; it grows more rapidly than any product we know of.

Moth, ...	Once, ..	0 4 2	
Moong, .. Mash, ..	Once, ..	0 4 2	
Sugar-cane.			

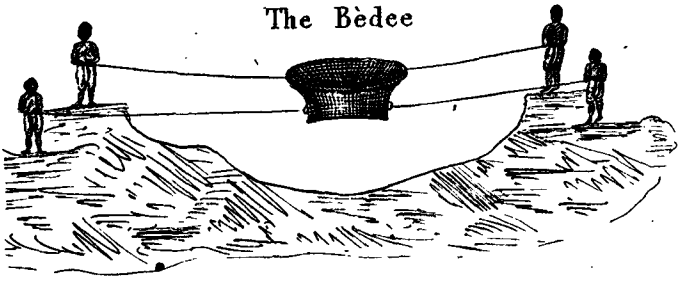
40. There are three modes of artificial irrigation in use among the agricultural classes of this District—

1st,—By the Bedee.
2nd,—By the Doogla.
3rd,—By the Poor.

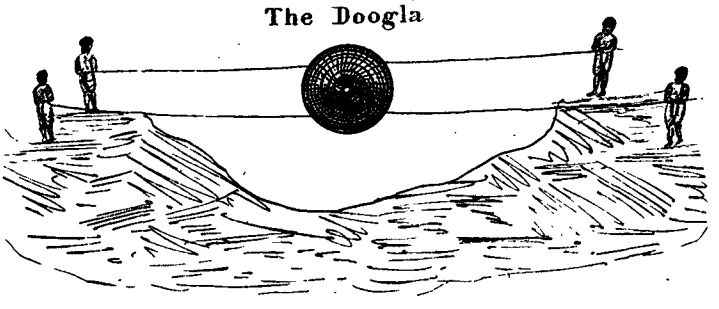
The first two modes are employed when the water is to be drawn from tanks or ponds, the last mode when well water is used; both the Bedee and the Doogla are a

kind of basket made from the common bamboo, and the annexed rough sketch may serve perhaps to show their form and use.

The Bèdee



The Doogla



The Bedee holds on an average,	20	seers of water.
The Doogla, ...	30	seers of water.
And the Poor, ...	40	seers of water.

41. It requires eight men to work one Bedee. The men are divided into two parties of four each, which relieve each other every half hour. Two ropes are attached to either end of the basket, two men having charge of one end and two of the other. If the spot upon which the water is collected should be on a level with the field required to be irrigated, one Bedee usually suffices; if otherwise, one, two, or even more Bedees are necessary to transport the water to the field. The channel by which the water is conveyed from Bedee to Bedee is termed a Nadha. One Bedee will convey water to a distance of 200 feet, and will irrigate six beegahs of Rubbee or four beegahs of Rice land.

42. The practice is for the labourers to commence work at midnight, and continue until sunset of the day following. The rate of remuneration which each man receives is three pukka pice and a quarter seer of parched grain.

43. The Doogla is worked in precisely the same manner as the Bedee, and is attended with the same expense.

44. The Poor is worked by bullocks, and is applicable to well irrigation only. Three men and a pair of bullocks are employed on each Poor. One of the men drives the bullocks, a second attends to the chursah or water-skin, and the third conducts the water to the field or portion of land required to be irrigated. It is calculated that six biswas can be irrigated from one Poor in the course of a day. The usual rate of remuneration to a labourer of this description is two pice and a quarter seer of churbun *per diem*, or if paid in kind, one and half seers of grain and a quarter seer of churbun, (parched grain).

45. The diameter of the water-skin ranges from 5½ to 7½ balusht. The village people reckon one balusht as equal to a ghurrah of water of the ordinary size, and the ghurra they consider capable of holding six seers of water. A skin of the average size, therefore, will be found to hold about forty seers of water. Lands irrigated artificially are called "Seecharo," and unirrigated "Useench."

46. The only Khurreef products that are artificially irrigated are Rice and Sugarcane. The only Rubbee product that is not artifically irrigated is Gram. The custom is first to use up any tank or pond water that may be available, and then to have recourse to well irrigation once or twice.

47. The following statement shows the cost of irrigating one beegah of land, by either or by all of the above processes:—

Statement showing the Cost of Irrigating one Beegah by the Bedee, Doogla, and Poor.

Name of Grain.	How many Times irrigated.	Cost of irrigating one Beegah by means of Doogla or Bedee.	Cost per Beegah in which both the Doogla and the Poor have been employed.					Average Cost per Beegah, taking one Season with another.
			Cost of irrigating by the Doogla or by the Bedee.		Cost of irrigating by the Poor or Well.		Total Cost.	
			Number of Times irrigated.	Cost.	Number of Times irrigated.	Cost.		
		Rs. A. P.		Rs. A. P.		Rs. A. P.	Rs. A. P.	Rs. A. P.
Rice, ...	6 times, at the rate of 2 as. 4 p. each time, ..	0 14 0	4 times, at the rate of 2 as. 4 p. for each time, ..	0 9 4	Twice, at the rate of 11 as. 3 p. for each time, ...	1 6 6	1 15 10	1 6 11
Wheat, ...	3 times, at the rate of 1 a. 6¾ p. each time, ..	0 4 8½	Twice, at the rate of 1 a. 6¾ p. for each time, ..	0 3 1½	Once, at the rate of 7 as. 6 p. each time, ..	0 7 6	0 10 7½	0 7 8
Birra, ...	Twice, at the rate of 1 a. 6¾ p. each time, ...	0 3 1½	Once, at the rate of 1 a. 6¾ p. ...	0 1 6¾	Once, at the rate of 7 as. 6 p. each time, ..	0 7 6	0 9 0¾	0 6 1

48. Every kind of Khurreef produce except Urhur, which is cut along with the Rubbee harvest, is cut by the month of Poos (January), and every kind of Rubbee produce is cut by the month of May; the only remaining process is to thrash and store the grain. This process is much less expensive in the Khurreef than in the Rubbee harvest.

49. The subjoined Table will show the expense which usually attends the process in both seasons:—

Statement showing the Cost of Cutting and Thrashing the Crops on one Beegah of Land.

1.	2.	3.	4.	5.
Name of Produce.	Labour employed on Cutting and Thrashing one Beegah.	Rate of Remuneration to each Labourer.	Cost of Labour per Beegah.	Remarks.
			Rs. As. P.	
Cotton,..	40 Persons, ..	Two chittacks in every seer of Cotton gathered, ...	2 1 4	If in the early part of the season there has been the average fall of rain, then the Cotton is ready for gathering by the middle of December, but if the rains should have been scanty, the Cotton is not gathered in such case until February. The usual practice is to gather the Cotton on every 4th day; two labourers will gather the Cotton of one beegah of land; and if the average number of gatherings on one beegah be assumed at 20, then it will require 40 labourers to gather the Cotton of one beegah, and the expense will be per beegah what is noted in column 4. It is never the practice to pay for this description of labour in money, but I have thought it proper to estimate the remuneration, in order that some idea might be formed of the actual cost attending the process.
			As. P.	
Jowar,..	5 Persons as follows,—4 in cutting, 1 in thrashing, ..	Usually 1½ seer of Grain, 5 Poolahs and occasionally 2 pysa in money, ..	Cutting,.. 3 8 Thrashing, 0 10	Four labourers will cut one beegah in one day, and one labourer will thrash it.
			Total,.. 4 6	
		To those who cut 1 Poolah out of every 21, to those who thrash 1½ seer of Grain, money is occasionally given at the rate of 10 pies, ...	As. P.	
Bajra, ..	5 Persons, ..		Cutting,.. 3 4 Thrashing, 0 10	Four labourers will cut one beegah, and one labourer will thrash the same.
			Total,.. 4 2	

1.	2.	3.	4.	5.
Name of Produce.	Labourer employed on Cutting and Thrashing one Beegah.	Rate of Remuneration to each Labourer.	Cost of Labour per Beegah.	Remarks.
			As. P.	
Rice, ..	6 Persons, ..	One Poolah out of every 12,	5 0	Four labourers will cut one beegah of Rice, and two labourers will thrash it.
Mukkra,	4 Persons, ..	One Poolah out of every 12,	3 4	Four labourers will cut a beegah of Mukkra, and two labourers will thrash it.
Moth, Mash, Moong	4 Persons, ..	10 pie, ..	3 4	The labourers are remunerated in money for cutting these grains.
Wheat, ..	12 Persons, ..	One Poolah out of 21, ...	10 0	It requires four men to cut one beegah of Wheat, and eight men to thrash it. Labourers are invariably paid in kind. The estimated value of the remuneration is shown in column 4.
Birra, ..	10 Persons, ..	Ditto,	8 4	Ditto as preceding.
Gram, ..	6 Persons, ..	Ditto,	5 0	Ditto as above.
Hemp, ..	20 Persons, ..	10 pie, ..	1 0 8	This article grows very closely. It is an expensive article to grow, as it needs to be removed and steeped in water and afterwards cleansed before it is fit for use.
Sugar-cane,				

50. The cultivation of the Sugar-cane, and its subsequent preparation, include so many items of expenditure that do not exist in the case of other agricultural products, that I have thought it best to give a separate account of the various processes that are employed in the cultivation and after-preparation of this valuable article. The usual processes employed, and their cost, will be seen by a reference to the annexed Table. The different processes have been entered in the order in which they are had recourse to:—

Statement showing the Processes and Labour employed in the preparation of the Sugar-cane, and their Cost.

1.	2.	3.
Description of Process or Labour employed.	Expense per Beegah.	Remarks.
	Rs. As. P.	
Saturating the ground, ..	0 7 6	In Chcyt, (April,) as soon as the Rubbee is cut, the field about to be sown, is inundated. If the water used is well water, the expense is what is shown in column 2.
Ploughing, ..	0 4 0	After the land has been inundated, it is ploughed four times consecutively; one plough with a pair of bullocks will plough one beegah in the course of the day. The expense will be 4 annas, at the rate of 1 anna for each ploughing.

1.	2.	3.
Description of Process or Labour employed.	Expense per Beegah.	Remarks.
	Rs. As. P.	
Puhta, ..	0 2 1	After each ploughing, the land undergoes the process of the "puhta" 5 times on each separate occasion, in all 20 times.
Sowing, ..	2 0 1 as follows :— Seed, 1 11 6 Labour, 0 4 2 Puhta, 0 0 5	The land is now ready for the seed; the cane is cut into pieces of about 1½ foot in length, and made up into bundles bound together with a cord; 12 of the above bundles suffice to sow one beegah of land; 7 bundles are valued at 1 rupee, at which rate the cost of 12 will be what is shown in column 2. Five labourers are required to sow one beegah; the cost of these labourers is 4 annas 2 pies. After the sowing is completed, the "puhta" is passed, 5 times over the ground, at a cost of 5 pies. The total expense attendant on sowing is rupees 2-0-1, as noted in column 2.
Doohrah Goodaee,	0 15 0	Every eighth day the ground is broken with the pick-axe; the process is employed 3 times; six labourers are employed on each occasion, making a total of eighteen labourers; the cost of these labourers, at 10 pies a man, is 15 annas.
Manuring by means of Goats and Sheep, ..	0 5 4	The next process is to manure the land by means of a flock of sheep and goats, which is driven into the field and there kept during the entire night. The charge is at the rate of 1 rupee for three nights.
Irrigation, ..	0 7 6	The field is now divided into plots, which are filled with water one at a time. When one plot has been thoroughly saturated, the water is let into a second one, and so on till the whole field is thoroughly irrigated.
Manuring and picking the ground, ..	0 8 4	Having broken the ground with the koodharee, the cultivator proceeds to manure it. There is no established rate for manure; the cost of picking the ground and spreading the manure is 8 annas, 4 pies; thirteen maunds of manure are required for one beegah.
Irrigation. ..	0 15 0	After manuring the ground it is irrigated twice, at a cost of 15 annas.
Goodaee and Apashee, ..	3 12 0	After being irrigated, the ground is again picked with the axe, and then again irrigated twice. The irrigation process is continued six times, the koodharee or pick-axe being used between each separate irrigation.
Weeding, ..	0 4 2	The first weeding takes place in Jeyt, (June;) five labourers are engaged at ten pies each.
Irrigation, ..	0 3 1½	From the month of Jeyt, (June,) the field is irrigated from tank or from well water; the cost is noted in column 2.
Cutting and cleaning the Cane, ..	1 14 0	The cutting commences in Aghun, (December). In six days one beegah can be cut and cleaned at the rate of 50 phandies or bundles per day; for every phandie, or bundle, the labourer receives four chittacks of moth, which would give 1 maund, 35 seers for every beegah of land, the value of which may be stated at 1 rupee, 14 annas.
Cost of the iron currahs employed in the preparation of the juice of the Cane, ..	1 2 0	From January to April, during which period this process goes on, it is usual for the owners of Sugar-cane lands to club together for the hire of a currah or boiler, for which they pay 6 or 7 rupees. In six days the produce of one beegah is extracted. The labour employed, costs, at 3 annas a day, 1 rupee, 2 annas.
Cost of persons employed in attending to the boiler, ..	0 7 3	There are three persons employed daily on this duty, while the juice is being extracted. The cost of the men is noted in column 2. These labourers likewise receive 5½ seers of goor between them; these men are paid higher than the other workmen, because they collect fuel for the boiler.

1.	2.	3.
Description of Process or Labour employed.	Expense per Beegah.	Remarks.
	Rs. As. P.	
Labourers engaged in cutting the Cane, ...	.. ..	These parties receive for every ghurrah of goor, 12 chittacks of goor, and 5 sticks of the cane.
"Ghundwa," or labourers employed in casting the Cane into the Sugar-mill, ..	.. ..	Two labourers are attached to each mill; they receive each 1½ seer of goor and 5 canes.
"Moorwah," or persons who arrange the Cane in the Sugar-mill; ..	0 7 3	Two labourers are required for this purpose, who receive, besides the 7 annas, 3 pies 1½ seer of goor and 5 canes.
"Kheo Kurwah," or person who cleans the Colhoo, after the juice of the Cane has been extracted, ..	0 3 7	One man is employed on this duty, who gets, in addition to the money payment noted in column 2, 6 chittacks of goor, 5 canes, and 1 ghurrah of the juice.
"Gooeen," or Drivers of the Bullocks employed on the Sugar-imill, ...	.. ..	The duty of this labourer is to drive the bullocks; he is paid 1½ seer goor, 4 canes, and four bundles of Sugar-cane leaves; four men are employed on each mill.
"Koombar," or Potter, ..	0. 1 2	The Koombar, who supplies the earthen vessels, receives for each Karkhanah, 1 anna, 2 pies, 12 chittacks of goor, 3 of the juice, 1 seer of treacle, and 5 canes.
Blacksmith, ..	.. .. ..	Receives 12 seers of goor for each Sugar-mill.
Wood required for the construction of the Sugar Mill, ..	0 6 0	The Colhoo is not made new every year, but certain parts of the wood-work, called Jat and Majur, require to be renewed yearly; the cost is shown in column 2.
Zemindar's Huq on each Kharkhanah that is worked on his estate, ...	.. ..	Three-fourths of a seer of goor and 1 ghurrah of juice and 10 canes are given to the zemindar on Kartick, Soodee, Ekadussee, commonly called Deotan, from which date the Hindoos generally commence to eat the cane.
Brahmin's Huq,	.. ..	6 chittacks of goor.
Chowkeedar's Huq, ..	.. ...	2 chittacks of goor from the commencement till the completion of the several processes.
Puqeer's Huq,..	.. .. ..	6 chittacks of goor.

Abstract of Expense attending Cultivation of one Beegah of Sugar-cane,—disbursed in Money, 14 Rupees, 13 Annas, 4¼ Pie.

51. The Assamees of the Cachie and Koormi castes find this description of cultivation very profitable, as they are largely assisted in the several processes by their women and children.

Rivers, Streams, and Climate of the District.

52. The only Rivers in the District are the Ganges and the Jumna, which form the Northern and Southern boundaries, respectively.

53. A Statement will be found in the Appendix,* showing the several kinds of Boats that are employed in the trade upon these two Rivers.

54. There are four smaller streams, the Pandóo, the Rind, the Noon, and the Susoor Khuderey. The Pandoo forms the boundary between this District and that of Cawnpore. The Grand Trunk Road crosses it 20 miles East of Cawnpore, by a bridge which was built shortly after the formation of this Zillah. The Rind traverses the two Pergunnahs of Kora and Tuppehjar, pursuing a South-easterly course till it falls into the Jumna in the latter Pergunnah. The Noon is in the Southern quarter of Pergunnah Kora; it flows for some miles in nearly a parallel line with the Jumna, into which it discharges itself near the village of Bhursa in the above-named Pergunnah. The Susoor Khuderey takes its rise in a jheel about one and half coss to the northward of Futtehpore, and flowing through Pergunnahs Huswa and Ekdillah, falls into the Jumna in the last-named Pergunnah. In its passage through these Pergunnahs, it is

* Appendix No. IV.

joined by five small tributaries from Pergunnahs Ghazeepore, Huswa, and Hutgaon. None of these streams are navigable, and with the exception of the Susoor Khuderey none of them are made available as a means of irrigation. Upon the Rind and the Noon a ferry-boat plies during the rainy months.

55. The year is divided into three seasons,—the hot season, commencing in April and ending in June; the rainy season, commencing in July and ending in October; and the cold season, which begins in November and ends in March.

56. The climate of the Futtehpore District has always had a bad character, but after a residence in it of several years, I am disposed to think that its general reputation for unhealthiness, as a District, rests upon very insufficient grounds, and that the climate is not nearly so bad as it is usually represented to be.

57. The Town of Futtehpore, from its peculiar locality, must necessarily be unhealthy. It is situated in the midst of an extensive swamp, which it would not be practicable to drain at such a moderate outlay as the Government would probably feel disposed to sanction. Another and equally fertile cause of the insalubrity of the Town of Futtehpore is the filthily dirty state of its streets,—an evil of which the inhabitants seem quite unconscious, and which the Magistrate has no very effectual means of remedying.*

58. The site of the Civil station was not well selected, although a Committee was formed, by order of the Governor General, for the purpose of instituting the requisite inquiries preparatory to determining the most eligible situation. It is to be regretted that the Committee did not institute a more careful inquiry than they would appear to have done, in carrying out the object for which they were appointed.

59. The site selected was in the centre of two swamps; the larger one, towards the Westward, has been thoroughly drained within the last few years, and is planted throughout with trees; the other, to the Eastward, is also partially drained, but as it is a continuation of the large jheel which surrounds the Town, and which extends Eastward as far as the Town of Huswa, its complete drainage is not practicable with the limited means at the Magistrate's disposal.

60. A Register of the Thermometer is subjoined, for the last official year, 1850-51. The glass was kept suspended in a room having a Northerly aspect. In the same Register will be found also an entry of the quantity of Rain which has fallen during each month of the same period.

---

* Since this was written, great improvements have been made to the Town. A metalled road, of upwards of a mile in length and 26 feet wide, traverses its entire length from East to West; and another metalled road of nearly similar dimensions, running North and South, intersects the heart of the Town and connects the Banda line of Road with the Grand Trunk Road.

61. A census of the District was made during the professional Survey in 1838. A second census was formed eight years subsequently, both being believed to be inaccurate. A third census was made in 1848, under the personal superintendence of the tehseeldars. This return was prepared with much care and patience, and may be relied upon. Every village throughout the District was visited, either by the tehseeldar himself, or by one of his subordinates, and an actual enumeration made of the inmates of every house of every village in the District. In this laborious duty, the local Officers derived invaluable aid from the zemindars, and other influential parties residing in the different villages; indeed, but for the efficient co-operation of the people themselves, it would not have been practicable to obtain anything approaching to an accurate census of the District.

62. The result of the census is shown in the annexed Statement:—

Name of Pergunnah.	Area in Square Geographical Miles.	Number of Houses.	Population.				Total Population.	Number of Persons to each Square Geographical Mile.
			Hindoo.		Mussulman.			
			Agriculturist.	Non-Agriculturist.	Agriculturist.	Non-Agriculturist.

64. The percentage which each Mahomedan sect bears to the entire population, is noted against each of the sects.

65. There are no less than 50 castes or sub-divisions of castes amongst the Hindoo population. The Shasters, however, as is well known, make mention of but four original castes, the Brahmin, the Chutry, the Bais, and the Soodra. Some pundits, however, admit a fifth original class, the "Kayusth," and cite as their authority the Pudum Pooran, which gives the following account of the origin of this caste:—

"Brahma, after peopling the earth in the mode described in the Shasters, fell into a state of '*tup*' as it is termed, a condition which implies a complete withdrawal of the mind from all worldly objects. In this state he remained during 11,000 years. On the expiration of that period he opened his eyes, when some water fell from one of them upon the ground. From that water sprung 'Chitur Gopit' (buried in the heart), who following the example of his divine parent, abstracted his thoughts from the world, and devoted himself for 14,000 years to continual prayer. On the termination of this '*tapussiah*' or penance, Brahma was so well pleased with his son that he made him register of the souls of the dead. Chitur Gopit had twelve sons, three of whom were sent to each quarter of the globe, in order that the Kayusth caste might take root and spread throughout the world,—hence the twelve sub-divisions of this caste. The Kayusths are all more or less conversant with accounts, a taste which they are said to have derived from their progenitor Chitur Gopit, who, according to the Pudum Pooran, was born with a pen in one hand and an inkstand in the other."

The above is the origin of the Kayusth caste according to the Pudum Pooran, but the more general belief would seem to be that the caste in question, like the other castes not specified in the Shasters, was included in the Soodra division of the population. Whatever may be the origin of the sect, however, this particular caste would seem everywhere to be held in equal estimation with that of the Rajpoot or the Bais.

66. The percentage which each caste bears to the entire population, is noted in the last column of the annexed Statement:

No.	Name of Sect.	Percentage on the entire Population.	No.	Name of Sect.	Percentage on the entire Population.	No.	Name of Sect.	Percentage on the entire Population.

67. The following five tables show the different Silver and Copper Coins which have been current in this part of the country previous to and since the accession of the British Government, and their shape, denomination, weight, and value:—

No. 1.

Statement showing the description of Silver Coins, their Weight and Value, which were current in this part of the Country, from the accession of the British Government to the year 1819.

Description of Coins.	Weight of each Coin.	Difference of Value between each Coin and the Company's Rupee.	Remarks.
Sunwat Kora, from Sun 1 to 11, Juloosee Shah Allum, ...	11¼ Mashas,	From 1¼ annas to 2 annas less, ..	This coin is scarce. People purchase it up for the purpose of making presents on the occasion of marriage and other ceremonies.
Zurrup Kora, Sun 12 and 20, Juloosee Shah Allum, ...	11¼ ditto, ..	From 2 annas to 2½ annas less, ..	Ditto ditto.
Moorshedubadee, Sun 19,	11¼ ditto, ..	None, ...	This coin is now very scarce: the silver being pure and good, people are very anxious to purchase it up for the purpose of making ornaments, and its value is 3 pies more than the Company's Rupee.
Zurrub Benares, Sun 17,	11¼ ditto, ..	.. .. ..	The preceding remark is applicable to this coin, with the exception to its value, which is 6 pies more than the Company's Rupee.
Lucknow Muchchullees,	11¼ ditto, ..	None, ...	The silver of this coin is good, but it is scarce and difficult to be procured.
Seerreenaghur, ...	11¼ ditto, ..	From 1 to 1½ anna less, ..	This coin is current in Bundelkund, but it is rarely met with in this part of the country.
Rajor Sahie, ...	11¼ ditto, ..	From 2½ to 3 annas less, ..	This coin is much sought after on the occasion of marriage and other such ceremonies.

No. 2.

Statement showing the description of Silver Coins, their Weight, Value, and in what year coined since the accession of the British Government.

Denomination of Coin.	Shape of Coin.	Weight of each Coin.	By what Act or Regulation coined.	At what rate of discount receivable at the Government Treasuries.	Remarks.
Company's Rupee, ...		11½ Mashas,	Acts XVII. of 1835, XXXI. of 1837, and XX. of 1838. ..	2 per cent. as per Act XVII. of 1835, and Circular Order, Sudder Board, No. 23, dated 13th November 1840, and Circular Order of Accountant, 29th September, 1839, ..	This coin is increasing every day in circulation.
Ditto, ...		11½.. ..	Proclamation, Notification No. 11 of 1840, ..	Ditto,.. ..	Ditto.
Graceedar or smooth-rimmed Rupees, ...		11½.. ..	Act II. of 1844,	1 Rupee and 8 Pies per cent.,	This coin is decreasing in circulation.
Kuldar Furrackabadee or straight-milled Rupees, ..		11½.. ..	Ditto, ...	Ditto,.. ..	Ditto.
Kuldar Furrackabadee, or diagonally milled, ..		11½.. ..	Regulations XLV. of 1803, and III. of 1806,	Ditto,.. ..	This coin has decreased in circulation considerably, in consequence of its having been bought up by Government, under Circular Order, Sudder Board, No. 23, of 13th November 1804, from the year 1804 to 1833. After the year 1833, this coin was prohibited to be bought up on the part of Government.

No. 3.

Statement showing the different 8, 4, and 2 Anna Silver Coins, their Value or Tale per Company's Rupee.

Denomination of Coin.	Shape of Coin.	Tale per Rupee.	By what Act or Regulation coined.	Remarks.
Company's 8-Anna Piece, ..		2 to the Rupee,..	Acts XVII. of 1835 and XXI. of 1838, .	This coin is increasing every day in circulation.
Company's 8-Anna Pieces, ..		Ditto, ..	Ditto,.. ..	Ditto.
Smooth-rimmed 8-Anna Piece, ..		Ditto, ..	Act II. of 1844,	This coin is decreasing every day in circulation.
Straight-milled 8-Anna Piece, ..		Ditto, ..	Ditto,.. ..	Ditto.
Company's 4-Anna Piece, ..		4 to the Rupee,..	Acts XVII. of 1835 and XXI. of 1838, .	This is increasing daily in circulation.
Company's 4-Anna Piece, ..		Ditto, ..	Ditto,.. ..	Ditto.

Denomination of Coin.	Shape of Coin.	Tale per Rupee.	By what Act or Regulation coined.	Remarks.
Smooth-rimmed 4-Anna Piece, ..		4 to the Rupee,..	Act II. of 1844,	This is increasing daily in circulation.
Straight-milled 4-Anna Piece, ..		Ditto, ..	Ditto,.. ..	This is decreasing daily in circulation.
Company's 2-Anna Piece, ..		8 ditto, ..	Acts XVII. of 1835 and XXI. of 1838, .	This is increasing daily in circulation.
Company's 2-Anna Piece, ..		Ditto, ..	Ditto,.. ..	Ditto.

No. 4.

Statement showing the different Copper Coins now in circulation, their Shape, Denomination, and Value.

Denomination of Coin.	Shape of Coin.	Weight of each Coin.	Value of each Coin.	Remarks.
Jumnaparee, Chowda Chikna Pysa, ...		.. ..	6 or 7 Dumree,..	This coin is brought from Bundelkund into this part of the country by Byparees.
Kukraitee Pysa,..		.. ..	Ditto, ...	Ditto.

Denomination of Coin.	Shape of Coin.	Weight of each Coin.	Value of each Coin.	Remarks.
Modhosahie Pysa,		From 16, 17, to 18 Mashas,	8 Dumree,.. ..	This coin is current in all parts of the country.
One-Quarter Anna,		6 Mashas,	3 Company's Pies,	This was coined by Act XXI. of 1835.
One-Quarter Anna,		Ditto, ..	Ditto, ...	This was coined by Shah Allum in Jaloose 37.
Half-Anna, ..		12 ditto,	6 ditto, ...	This was coined by Act XXI. of 1835.
Half-Anna, ..		Ditto, ..	Ditto, ...	Ditto.
One Pie, ...		2 ditto, ..	1 ditto, ...	Ditto.

No. 5.

Statement showing those Copper Coins which were formerly in circulation, but now either decreasing or have altogether disappeared.

Denomination of Coins.	Shape of Coin.	Weight of each Coin.	Value of each Coin.	Remarks.
Nuwabee Pysa, ..		11½ Mashas,	5 or 6 Dumree,	This coin is coined at Lucknow, and is brought into Futtehpore through Cawnpore.
Nuwabee Share Shahee Pysa, ..		12 ditto, ..	4 Dumree, ..	Ditto.
Balashahee Pysa,		14½ ditto, ..	6 ditto, ...	This is brought from Bundelkund.
Treesoolee Putunee Pysa, ..		5½ ditto, ..	3 Company's Pice,	Has been coined and circulated since the accession of the British Government.
Jhar Shahee Pysa,		15 ditto, ..	5 Dumree, ..	Coined in Joypore. The circulation of this coin in this part of the country is very limited.
Goruckpooree Pysa, ...		9 ditto, ..	3 ditto, ...	Not in circulation.
Gowalieee Pysa,..		9 ditto, ..	3 ditto, ...	
Bhurtpooree Pysa,		1 Tola and 8 Mashas,	7 ditto, ...	

Denomination of Coin.	Shape of Coin.	Weight of each Coin.	Value of each Coin.	Remarks.
Nanuck Shahee, Lahore Pysa, ..		9¼ Mashas,	2 Dumree, ..	
Rewa Shahee Pysa,		11¼ ditto, ..	4 ditto, ...	
Ummunta Pysa, ..		13½ ditto, ..	.. .. ..	This Pysa contains one ruttee of gold, and if the gold has not already been extracted its value is 3 or 4 Annas, otherwise 6 Dumree only.
Ramnamee, ..		8½ ditto, ..	.. .. ..	This Pysa, which is coined in the Deccan, also contains gold of about one rice-grain weight; with the gold, the value is from 3 to 4 Annas, and if the gold be extracted, 3 Dumree.
Nuwabee Kootub Khanee Pysa, ..		12 ditto, ..	5 Dumree, ..	Coined at Furruckabad.
Nuwabee Muchchulleea Pysa, ..		Ditto, ..	5 ditto, ...	Coined at Cawnpore, and is current in the District of Cawnpore.

WEIGHTS AND MEASURES.

68. Previous to the cession, the weights which were used in this District were regulated by the Sunwat Rupee, of which 89 were reckoned to the Seer: the following was the scale :—

8	Ruttees, ...	equal to	1 Màsha.
12	Màshas, ...	„	1 Tola.
18	Ditto, ...	„	1 Muddo Sahee.
4	Muddo Sahee,	„	1 Gunda.
14	Gundas, ...	„	1 Seer.
40	Seers, ...	„	1 Maund.

69. The above scale was applicable only to retail dealings; in wholesale dealings when the Punseeree came into use, 96 Sunwat Rupees were reckoned to the Seer, being a difference of 7 Rupees in each Seer between the retail and wholesale weights.

70. On the banks and in the neighbourhood of the Jumna another system of weights obtained, altogether different from the foregoing one. The system in question was regulated by means of a large flat thin copper coin variously termed the "Chowra," "Chikna Jumnaparee." This coin is still in extensive circulation across the Jumna, but its value deteriorates proportionately with the distance at which it may be found from that river.

71. The following is the scale of weights which was derived from this coin :—

20	Chikna Jumnaparee,	equal to	1 Seer Cutcha.
5	Seers, ...	„	1 Punseeree ditto.
2	Punseerees, ...	„	1 Dhukka ditto.
4	Dhukkas, ...	„	1 Maund ditto.

The Pukka weights were exactly triple those of the Cutcha, the former being equal to 87 Furruckabad Rupees, whilst the latter was equal only to 29 Furruckabad Rupees.

72. In the earlier years of our rule, the weights were regulated by no fixed law. In some parts of the District 100 Sunwats were reckoned to the Seer, whilst in others the Seer was reckoned at 96 Kuldar Rupees. In 1818 Mr. E. J. Smith, the Joint Magistrate of these Pergunnahs, endeavoured to assimilate the weights throughout the District by directing that they should be regulated on the scale of 96 Rupees to the Seer, and this weight, until within the last year, has been in general use throughout the District. It is now almost entirely superseded by the Company's standard weight of 80 Tolas to the Seer, which I have for some months past been engaged in introducing generally throughout the District.

73. By Regulation VII. of 1833, the unit or Tola of the Company's new system was fixed at 180 Grains Troy; from it are derived the heavy weights of the Chittack,

the Seer, and the Maund, as also the lighter weights called Màshas, Ruttees, and Dhâns.

74. The subjoined Table shows both descriptions of weights:—

Maund.	Punseeree.	Seer.	Chittack.	Tola.	Màsha.	Ruttee.	Dhân.
1	8	40	640	3,200	38,400	307,200	1,228,800
	1	5	80	400	4,800	38,400	1,53,600
		1	16	80	960	7,680	30,720
			1	5	60	480	1,920
				1	12	96	384
					1	8	32
						1	4

GOLD AND SILVER WEIGHTS.

75. 8 Grains of Rice make 1 Ruttee, = 1·875 Grains, *Troy*.
8 Ruttees „ „ 1 Màsha, = 15 ditto, *do*.
12 Mashas „ „ 1 Tola, = 180 ditto, *do*.

76. The Ruttee is the seed of a wild flower called the Ghoonchi, which has a seed half red and half black, a little larger than a pepper-corn. The Màsha is made generally of copper or pewter, or occasionally of common crockery.

ABKAREE WEIGHTS.

77. The Kulwars, or vendors of spirituous liquors, sell generally by measure. They have four measures in use, as follows:—the "Boornee," which holds ¼ Seer or 4 Chittacks; the "Gyley," which holds 8 Boornee or 2 Seers; the "Koonda," which holds 6 Boornee or 1½ Seer; the "Jorkutty," which holds 24 Boornee or 6 Seers.*

78. Oil is sold by weight when the quantity exceeds two Chittacks; when less than two Chittacks it is sold by a measure called a Bèla, so called from its being usually made from the fruit of the Bèl tree, or wood-apple.

CLOTH MEASURE.

79. 3 Oongul make 1 Girah, = 1½ Inches, } Used by Cloth Merchants
16 Girahs „ 1 Guz Buzazi, = 24 ditto, } generally.
5 Kurree Jao „ 1 Girah, = 1¼ ditto, } Used by Tailors only.
16 Girahs „ 1 Guz Kutai, = 20¼ ditto, }

* In Towns or Kusbahs it is usual to sell spirits and wine by the bottle, but such is never the case in the Villages.

The Guz Kutai is 3 Girahs less than the Guz Buzazi. The English Yard measure is also much used by the Native merchants of this District.

The Ilahi Guz is used only by Masons and Carpenters; its sub-divisions are as follows:—

3 Till	make	1 Payu	=	·34575 Inch.
4 Payus	„	1 Tussoo	=	1·375 ditto.

24 Tussoo or 2 Haths, measured from the elbow to the thumb, equal 1 Guz, or 2 Feet and 9 Inches, English.

The Guz Ilahi is 2¼ Girahs less than the Guz Buzazi.

LAND MEASURE.

80. The old Land measure, which was in general use previous to the introduction of the settlement Jureeb, was subdivided as follows:—

9 Mooties	make	1 Guz,	=	2½ English Feet.
8 Guz	„	1 Kuttah,	=	7½ ditto.
20 Kuttah	„	1 Jureeb,	=	150 ditto.*

It was the custom in some places to make a measurement of land by pacing the ground; the calculation was made as follows:—

3 Qudums, or Paces,	equal to	1 Kuttah.
20 Ditto, ...	„	1 Cutcha, Jureeb.
3 Cutcha Jureeb, ...	„	1 Pukka, ditto.

81. There is another Land measure which exists in Pergunnah Ghazeepore, but it is confined only to the villages of Raja Dooniaput Sing. It had its origin in the following manner:—Raja Roopraè, the ancestor of the present Raja, was bathing one day upon a wooden platform, when a Mirdha inquired of him how many Guz he was to reckon to a Kuttah; the Raja standing up upon the platform, and raising his hand as high as he could, replied, "As many as will reach from the ground to the tip of my finger." The measurement being made, the result gave 11 Mooties to the Guz; this measurement is still in force in the estates of the Raja, but nowhere else; it is called the Kheechur Beegah,—the Kheechur caste being that to which the Raja belongs.

82. The Government Land measure is thus sub-divided:—

8 Kurree Jao, are	equal to	1 Inch.
12 Inches, ...	„	1 Foot.
3 Feet, ...	„	1 Yard.
44 Yards, ...	„	1 Jureeb.†

* It was the practice of the Mirdhas who were employed in the measurement of land to fasten the end of the Jureeb round their necks, which had the effect of reducing the length of each Jureeb by about 2 Kutiahs, or 15 feet.

† A Jureeb contains 200 links.

83. There is another measure that is in general use in this District, denominated the "chautah panth," which is deserving of notice; this measure is only made use of upon one occasion, which is this, whenever the grain of a field is thrashed and ready for storing in the "kalian," it is the custom of the "*naee*" or village barber to estimate the produce of such field by means of a measure called a "chautah,"—82 chautahs are considered to be equal to one panth, and for every panth so measured, the barber is entitled to receive one chautah for his trouble.

84. Banking operations, borrowing and lending of money on mortgages and on pawn:—

There are two descriptions of Mahajuns or bankers: first, those who are acquainted with the forms and practices of our courts, and whose dealings are regulated in conformity therewith; this class, whenever they advance money on loan, receive a "tumasook," or bond, for the sum advanced, upon stampt paper; if the money is not repaid within the stipulated time, a suit is filed in the civil court for its recovery. The other class know nothing of our law courts, nor are their dealings in any way guided or influenced by the practices of those courts; they keep a "buhee," or account book, in which their several banking transactions are entered, but in the briefest possible form; the absence of all detail in this book renders the "buhee" of comparatively little value, as a record of the transaction, should it so happen, which is rarely the case, that such transaction becomes the subject of litigation in our courts, but the parties themselves in a transaction of this nature, and the village people generally, regard the "buhee" as a most trustworthy document, and the "punchayat" through whom, in the event of disputes, such cases are usually adjusted, rarely require any other evidence of the justness of a claim than what may be afforded by the entry in the Mahajun's "buhee."

85. The interest upon loans is thus regulated:—

Firstly,—When a banker has occasion to borrow from a brother banker, the interest on the loan varies from 4 Annas to 1 Rupee *per mensem* on every 100 Rupees advanced.

Secondly,—When a zemindar or a cultivator requires money to pay his quota of the Government demand, the banker comes forward, and makes the necessary advance upon the security of the standing crop, which crop he takes care to bring to immediate sale if the loan is not repaid by the date agreed upon between the parties; the principal, together with interest at the rate of 1 Anna for every Rupee, is then deducted from the sale proceeds; the whole transaction from first to last, does not ordinarily occupy more than fifteen days.

86. Loans advanced under any other circumstances, or for any other purpose, are usually subject to the condition that they be repaid with the harvest next ensuing,—thus if a loan is required during the Khurreef season, the borrower is required to repay it in the Rubbee harvest, or *vice versâ*; the interest charged on such loans is at the rate of 1 Rupee a month, or sometimes, in lieu of interest, the borrower agrees to pay a sum equal to one-fourth of the principal. Those bankers who are acquainted with the Government Regulations, which fix the legal rate of interest at 12 per cent., generally adopt this latter course, and they not unfrequently take the highest rate of legal interest besides. In the case of parties who fail to repay their loans by the stipulated date, it is

usual for the Mahajun to start a fresh account from such date, adding the principal and interest together, and exhibiting the same at the borrower's debit under the head of "principal."

87. Every Mahajun has a Taveeldar, or a "Koolchaha" as he is denominated, who invariably does a little business on his private account with his master's money; the practice is a very general one, and one which the Mahajun tacitly suffers to exist, as he has no sufficient means of preventing it: the business done in this way is of a trifling nature, the Koolchaha takes upon these transactions 1 Pysa a month for every Rupee he lends out, and he also receives a present at the rate of 2 Pice upon every Rupee he advances.

88. Mahajuns receive property on pawn on the following terms:—

If the article brought for pawn is of gold, an advance will be made to the extent of three-fourths of the value of the article; if the article be silver, the advance will be equal only to one-half of the value of such article,—thus gold ornaments of the value of Rs. 100 will generally command a loan of Rs. 75, whilst silver ornaments will command a loan of only Rs. 50; the interest demanded upon such transactions is never less than 6 Annas a month for every 100 Rupees, and is very frequently 12 Annas. The Mahajun rarely importunes the pawner until his claim, inclusive of interest, exceeds the value of the article pawned, when it does, the Mahajun usually becomes the purchaser of the pledged article, or otherwise he makes the pawner pay him principal and interest up to a certain date, and a fresh transaction is made between the parties.

89. The interest paid upon mortgages of real property, such as houses, gardens, and the like, and also upon mortgages of moveable property, varies from 1 Rupee to 2 Rupees 8 Annas.

90. The manufactures of the District are very insignificant: a few of the coarser kinds of cloth are made in Pergunnahs Futtehpore, Bindkee, and Kora, but the finer kinds are all brought for sale from the Eastward. A thin coarse blanket is manufactured in Pergunnah Hutgaon, but it is of very poor texture. There are two Floor-cloth establishments in Pergunnahs Ekdillah and Tuppehjar, where a large quantity of the cloth called "Jazum" is stamped of different patterns, and sent annually for sale to the neighbouring station of Cawnpore. The "Korah," or common native whip, made in Futtehpore is much sought after; Bows and Arrows, Shields, and ornamented Feet for Beds, are made to a great extent in Kusba, Kudjwah, and in Kora Jehanabad a great variety of Copper and Bell-metal utensils are manufactured; these latter are held in high repute,—indeed the Rikabbi Gung of Kusbah Kora is known in all the large cities of the Dooab.

91. There is a brisk traffic carried on at Kudjwah in Iron, Copper, Brass, and Groceries; but the largest mart in the District is that of Hoosain Gunge, in Pergunnah Futtehpore, where every article of trade almost is to be met with, excepting Brass and Copper.

92. In Bindkee Khas, Aswa, Tarapore, and in Bohwa, large sales of cattle are regularly held twice a week.

Three kinds of bullocks are brought to these sales from the country South of the Jumna; first, the "Kainwayah," or those that are bred in the neighbourhood of the River Kain; second, the "Khysar," so called after a zemindar of that name in Bundlecund; and the third, or "Jummata," which is bred in the neighbourhood of the Jumna. Merchants from Zillahs Juanpore and Allahabad are the principal purchasers of these cattle.

93. The "Badfurosh" of Mundun Serai, in Pergunnah Huswa, do a considerable deal of business in Cotton; they export a large part of the surplus produce of this District, and they buy up also for exportation a large quantity of Bundlecund Cotton, which is always obtainable at much lower rates than the Cotton of this District. The "Bajpaè" of Usnee, as also the merchants of Mundun Serai, occasionally import Shawls (Cashmere) for sale, but not to any large extent.

94. There are only five Saltpetre manufactories in this District; the whole belong to Baboo Balram Doss, a highly respectable native merchant of Futtehpore.

The out-turn of the season 1850 was 3,247 maunds, and the average selling price was 5 Rupees 6 Annas and 5 Pie per maund. The raw Saltpetre is made in 535 villages of the District; the whole is carried to the above 5 kothies, where, after being refined, it is exported to Mirzapore and Calcutta.

MAGISTERIAL.

95. I now proceed to give some account of the state of the Police, from the first appointment of a Joint Magistrate in 1814 down to the present time.

96. In pursuance of the Order of Council of the 8th of August 1814, to which I have already adverted in para. 3 of this Report, the undermentioned Thannah Stations were placed under charge of Mr. C. J. Middleton, the Officiating Joint Magistrate of Futtehpore:—

	No.	Name of Thannah.	Number of Villages within its Jurisdiction.
From Zillah Allahabad.	1,	—Currah,	130
	2,	—Hutgaon,	200
	3,	—Kishenpore Ekdillah,	210
	4,	—Huswa,	297
	5,	—Futtehpore,	370
	6,	—Ghazeepore,	127
From Zillah Cawnpore.	7,	—Bindkee,	234
	8,	—Kudjwah,	43
	9,	—Kora Jehanabad,	89
	10,	—Amowlie,	120

The changes which have subsequently taken place in regard to these Thannah Stations will be noticed hereafter. The Head Quarters of the Joint Magistracy were fixed at Bhitorah, a small village on the Ganges, about three coss to the Northward of Futtehpore, a spot which was selected apparently on account of its great natural beauty and the salubrity of its climate. Objections to this locality, however, were subsequently discovered in 1825, in consequence of which the Civil Station was transferred to the Town of Futtehpore.

97. Mr. Middleton entered upon the duties of his new appointment at the latter end of 1814; his administration of the Police during the earlier period of his incumbency cannot be considered to have been successful, if it is to be judged of by the official Returns of the period referred to; it should be borne in mind, however, that in being the first to assume charge of the new appointment, Mr. Middleton had difficulties to contend with, to which his successors in office were probably strangers. The jurisdiction of which he had newly assumed charge, was composed of a set of Pergunnahs taken from the extreme ends of two large Districts: these, from the circumstance of their peculiar locality, were in a more disorganized state than those Pergunnahs whose closer proximity to the Sudder Station had afforded them the advantage of a more direct control on the part of the Magistrate; the former had seldom or never been visited by an European Officer; in these, therefore, the local Police were all powerful, and even if they did not openly connive at crime, they made no scruple in winking at its commission; there being no efficient supervision exercised over their proceedings, even the best disposed of them acquired habits of indolence and indifference in regard to the discharge of their duties.

98. Mr. Middleton laboured hard to remedy these evils, and after the year 1816 a marked improvement may be traced in the state of the Police generally throughout his jurisdiction. The Superintendent of Police in forwarding to Government his Annual Report for 1815, speaks of the Police in the following terms :—"Nearly every "species of offence has increased within the jurisdiction of the Joint Magistrate; the "Returns exhibit the apprehension of 1,425 persons by the Police Officers in this "jurisdiction during the past year, 285 only of whom are stated to have been punished "by the Magistrate. In no other District in these Provinces do the persons punished "bear so small a proportion to those apprehended: I should fear, therefore, that the "Police Officers either take up people wantonly on insufficient grounds, or that they "are deficient in the exercise of due exertion in the attainment of evidence for the "conviction of criminals."

99. It is possible that the multiplicity of official duties which Mr. Middleton was called upon to discharge at this particular period, may have prevented his giving that degree of attention to his Magisterial duties which the state of the Police at this time so urgently demanded. In addition to his ordinary duties as Register and Joint Magistrate, Mr. Middleton was intrusted during the first three years of his incumbency with the superintendence of the whole of the public works upon the high road from Allahabad to Cawnpore; during a considerable portion of the same period his time was constantly occupied in attending to the medical wants of the sick prisoners of his Jail Hospital. Some idea may be formed of the extent of Mr. Middleton's medical practice in 1816, from the following extract of a letter addressed by him on the 10th of October of that year to the Civil Surgeon of Allahabad :—"Out "of about 250 prisoners," (writes the Joint Magistrate,) "100 are extremely ill; the "powders sent by you before have proved of service, but I take the liberty of sug- "gesting, that those now sent may be a little more powerful; the fevers appear "highly inflammatory, and in my judgment should be met with medicines of a power- "ful nature."

100. Mr. Middleton was shortly afterwards relieved of this branch of his Official duties.

101. The most prevalent crime at this particular period, and one which defied the utmost efforts of the Police to bring home to the perpetrators of it, was that of Thuggee. In 1816, no less than 13 cases of this atrocious offence were reported from Futtehpore, and in the year immediately preceding it, 6 cases; in no single instance were the offenders traced. In 1817 the Returns were more favorable; and in addressing Government in June 1818, the Superintendent of Police remarks with much satisfaction that "the "Police Statement for 1817 does not exhibit a single case of murder by Thugs, although "the Report of the year preceding contained mention of no less than 13 instances of "that offence."

102. It is difficult to account for the sudden cessation of this crime. It is easier to believe, from what we now know regarding the Thugs and their system, that the increased vigilance of the Police had led to increased caution on the part of these murderers, and that they were more careful to conceal the bodies of their victims, which may have induced the belief that the crime was of less frequent occurrence than had been the case hitherto.

103. Another evil that attracted the attention of Government about this time, was the interruption to the navigation of the Ganges, owing to the illegal exactions of the zemindars of the Oude side of the river. In June 1817, the Superintendent of Police writes to the Judicial Secretary regarding this grievance as follows:—

"The Cawnpore merchants have also petitioned my office, stating that they have "sustained a loss of several lacs of Rupees from these unwarrantable exactions, exclusive "of the interruption and injury done to the trade by the delay in the stoppage "of their boats." It was proposed, with the sanction of Government, to establish a number of Guard-Boats upon the Ganges, for the better protection of the river trade. Mr. Middleton recommended* that some of the mud forts of the Oude zemindars should be stormed and levelled to the ground, particularly the one on the banks of the river belonging to Zalim Sing, an individual who was known to be most active in the collection of this river "Black Mail." "I do not conceive," writes the Joint Magistrate, "that much resistance would be offered, but if a small force were "to be placed at my disposal, I would endeavour to ascertain the fact with the least "possible delay." Mr. Middleton's proposal was approved of, and he was directed to take immediate steps, with a view of ascertaining the size of the forts he proposed to attack, the depth of the ditches, the nature of the defences, and the number of armed men usually kept up for their defence: the result of the Joint Magistrate's inquiries was unfavourable to the prosecution of the plan he had advocated, and it was abandoned accordingly.

104. The insecurity of the great thoroughfares in the Western Provinces had long been a source of grievance. With a view of remedying this evil, Regulation XVII. of 1816 was framed, an enactment which empowers the Magistrate, with the sanction of the Superintendent of Police, to station any portion (not exceeding one-third) of a Thannah establishment at any place within the limits of the jurisdiction of such Thannah. In conformity with the provisions of the above enactment, Mr. Middleton established a chain of chowkees along the high road leading from Allahabad to Cawnpore; two burkun-

* *Vide* Letter to Superintendent of Police, dated 25th September 1817.

dauzes were stationed at each outpost, and the whole were placed under the superintendence of two Thannah jemadars. The measure, however, does not appear to have been attended with the benefit which might have been expected to result from it. Highway robberies, for the suppression of which the measure was mainly intended, instead of decreasing, seem steadily to have increased until the year 1826, when they had reached their maximum height,—no less than 19 cases having been reported during the preceding year, (1825.)

105. At this particular period the local Police seems to have been in a state of complete disorganization. Mr. Begbie, writing to the Superintendent of Police at the latter end of 1824, says,—"It is really astonishing to me that with such officers as some "of those under me more offences do not occur. I have at present a large catalogue of "the misdeeds on the part of the thannadars, the least of which in my opinion were "sufficient ground for removal from office: extortion, corruption, embezzlement, and "connivance at crimes are the leading characters of this record. I have detected them "in falsifying dates to excuse their inactivity, accusing innocent persons of crimes of "which they must have known them to be innocent, and conniving at the escape of "offenders." This officer laboured diligently to improve the character of his Police, and though no diminution of the more heinous offences is apparent during his administration, or in that of his immediate successor in office, yet the result of the trials, both before the Joint Magistrate and the Court of Circuit, would seem to indicate that the local Police were more successful in apprehending real offenders, than they had been during any previous administration.

106. In 1826, Futtehpore was formed into a distinct zillah, when the Joint Magistracy at Bhitorah was abolished; the names of the several officers who held the appointment of Joint Magistrate previous to the creation of the new zillah will be found in the Appendix.* In 1831, the appointments of Collector and Magistrate were united, and on the 9th August of that year, Mr. J. T. Rivaz assumed charge of the Joint Office.

107. The experience of nearly twenty years, has amply proved the wisdom of uniting the Fiscal and Magisterial jurisdictions in these Provinces, yet on the first introduction of the measure, there were many able and experienced servants of the Government who regarded the new system as one of very doubtful expediency; amongst the number was Mr. Commissioner Barlow, who in addressing Government on the subject of the Futtehpore Police during 1832, says,—"I feel called upon to state my opinion that the union "of the offices of Collector and Magistrate, without the aid of a Deputy Collector and "Joint Magistrate, does not answer in this District." Mr. Barlow considered that the details of a Collector's office were more than enough to engage the time of one individual, and under the conviction that the duties of a Magistrate were best discharged by an officer whose sole attention was given to that department, he had some time before this, in an address to the Board of Revenue, recorded an opinion unfavourable to the union of the two offices.

108. Nothing could possibly be worse than the state of the Futtehpore District at this particular time, as will be seen from the subjoined extract of Mr. Barlow's Police Report, yet it can scarcely be deemed fair to judge of the practical working of

* Appendix No. V.

a great measure like the one we have just adverted to, merely from the results of a single year, and that year too the first in which the experiment had been tried, and during the whole of which year, with the exception of three months, the duties of the two offices were left to be discharged entirely by the Collector and Magistrate. "It is to "be remarked," writes Mr. Barlow, "from the following Comparative Statement, that "although the District contains 1,827 villages only, whilst the District of Allahabad "contains 3,476 villages (being nearly double the number), crimes of every description, "excepting theft, cattle stealing, and wounding, have during the period under review "been more prevalent than in the latter District:—

	Allahabad.	*Futtehpore.*
"Dacoity,	0.	3.
"Thuggee,	1.	6.
"Highway Robbery,	3.	4.
"Burglary,	143.	221.
"Cattle Stealing,	20.	6.
"Thefts,	171.	64.
"Affrays,	4.	14.
"Murders,	5.	7.

"In the District of Allahabad, the European officers consisted of Mr. Carter, the "Collector and Magistrate, Messrs. Speirs and Caldecott, the two Deputy Collectors "and Joint Magistrates; whilst at Futtehpore there was only Mr. Rivaz, the late Col-"lector and Magistrate, and Mr. Onslow, the Officiating Head Assistant, during the "months of April, May, and June."

109. The appointment of a Joint Magistrate, in 1833, tended in some degree to improve this state of things, but it was not until the year 1841 that the Criminal Statements began to exhibit a decrease of crime. From this period and till the year 1848 a marked improvement may be traced in every branch of the Department; the more heinous offences had steadily diminished. The convictions bore a satisfactory proportion to the number apprehended, and the Criminal business generally was discharged with efficiency, regularity, and despatch.

110. There was still, however, one branch of the Police which remained in a defective state, and that was the Village Watchmen. The Settlement Officer in 1839 had found them as a body ill-paid, inefficient, and inadequate to the wants of the people; he left them in a still worse condition. Mr. J. Thornton reported the subject at length in 1842, and after pointing out the defects of the provision which was made at the time of settlement, he recommended the appointment of 265 additional chowkeedars upon a monthly salary of Rs. 2-8 each.

111. In submitting the above recommendation, Mr. Thornton was guided by the following principles:—"that one chowkeedar is able to guard 60 houses; that every separate "hamlet ought to have a separate chowkeedar; that this is not necessary where such "hamlet does not contain more than 10 houses; but I have been obliged" (writes this officer) "occasionally to deviate from these principles when the number of watchmen "would have been great as compared with the size of the muhal."

112. Mr. Thornton was of opinion, that it was better to remunerate the village Police by a monthly salary than by a grant of land. The time which is occupied in the cultivation of the jageer, and the uncertainty that must necessarily attach to a provision which is dependent upon the seasons, he considered unanswerable arguments upon this point. "The jageers assigned to the chowkeedars of this district," (proceeds Mr. Thornton,) "contained 3 acres or 7 beegahs each; but it has been with great difficulty that "the zemindars have been compelled to give up this land, and I fear that, in many "cases, the chowkeedar has never obtained it, although, in order to please the zemindar, "he has stated that it has been made over to him; the difficulty has of course been still "greater to procure the assignment of land of a really good quality. The jageers "made over to the chowkeedars would certainly not pay, upon an average, more than "Rs. 2-12 a beegah, and their total value is consequently less than 20 Rupees a year. "It seems to me, therefore, that a salary regularly paid, of even 2 Rupees a month, "would be a better maintenance in every way for a chowkeedar than the land hitherto "assigned to them, and the first step to the establishment of a better order of things "appears to be, that the jageers already granted should be commuted for a salary of "the above amount. I believe that, in the majority of cases, both the zemindars and "the chowkeedars would be found willing to agree to the change, for the former never "part with any portion of their land without great reluctance, and the latter would see "the advantage of a fixed maintenance, while if they wished to cultivate, they could "always obtain land on the same footing as other assamees; I would propose then, in "the first place, that authority be given to commute the jageers granted at settlement "for a monthly sum of 2 Rupees to be paid by the zemindars to the chowkeedars "wherever both parties can be brought to consent to the exchange. In the second place, "I think that this monthly allowance if it should be thought, as it certainly is, to be "too low, should be raised to Rs. 2-8 at the expense of Government."

113. In regard to the road watchmen, Mr. Thornton considered that the arguments he had employed in advocating a money rather than a land payment, in the case of the Village Police, applied with two-fold force to the Road Police; the former, he remarked, had their "deorha" and other perquisites on stated occasions, which the Murhela chowkeedars had not, and on this account he was unwilling to fix the remuneration of the latter at a lower rate than Rs. 2-8 a month. These Murhela chowkeedars, of whom there were originally 151 stationed upon the principal thoroughfares of the district, had hitherto been maintained solely at the expense of the zemindars. On the conclusion, however, of the revised settlement, many of the zemindars discontinued the land and money allowance which they had hitherto assigned for the maintenance of these watchmen; the question therefore arose, whether it was expedient that this force should be maintained at the Government expense or be given up altogether.—Mr. Thornton was of opinion that it should be maintained, and for that purpose he proposed the entertainment of 121 men at a monthly salary of Rs. 2-8 each.

114. In regard to the eight villages enumerated in para. 20 of Mr. Thornton's letter, in which the inhabitants, by an arrangement made amongst themselves, had raised the necessary funds for the maintenance of the watchmen required for those villages, Mr. Thornton thought it would be desirable, if the system which had continued so long in force in these villages could be legalized, more especially as no complaint would ever appear to have been preferred on the part of any person in any way concerned in the arrangement. A similar recommendation was submitted to Government by Mr. Mid-

dleton in July 1817, and again by Mr. E. J. Smith in 1819, but the proposal did not meet with the concurrence of the Governor General, who observed in reply, that "in the "Western Provinces especially, the Magistrates should carefully abstain from any inter- "ference, either direct or indirect, in encouraging or supporting a plan of this nature, "involving expense to the inhabitants." After a lapse, however, of more than 30 years, during which the above arrangement has continued uninterruptedly in force, it is difficult to understand what objection can now exist to the formal recognition of a system which has given universal satisfaction during a period of more than a quarter of a century.

115. The several propositions which were submitted by Mr. Thornton, relative to the village and road watchmen, were considerably modified before they were finally sanctioned by Government. The number of additional village chowkeedars sanctioned was 155, instead of 265, as proposed by Mr. Thornton. The proposal, that the whole should receive a remuneration in money was negatived, and a land allowance was sanctioned instead, which was fixed at 3 acres. The maintenance of 121 chowkeedars along the high roads was also negatived, but Government have subsequently sanctioned for this purpose the establishment of 44 Murhela watchmen, and by a more recent order,* 26 additional chowkeedars have been since sanctioned expressly for the Grand Trunk Road.

116. In 1845 Mr. William Muir revised the Police establishments throughout the district. The Thannah of Kurrah had already been transferred to Allahabad, by order of Government, dated 11th of November 1840. At the period of the revision, the following Police stations were subject to the jurisdiction of the Magistrate of Futtehpore:—

1. Kotwalie,	4. Kishenpore,	7. Amowlie,
2. Huswa,	5. Ghazeepore,	8. Kudjwah,
3. Hutgaon,	6. Jehanabad,	9. Seorajpore.

117. The chief defects of the system about to be revised were, briefly, that the thannahs as they then stood were unequal in extent, and irregular in their limits; that there was no proper adaptation of the Police to the area and population of the several Thannah jurisdictions; that the Fiscal and Police divisions did not correspond; and that the thannadars were inadequately paid.

118. Mr. Muir reduced the number of thannahs from 9 to 7, and increased the pay of the thannadars from Rupees 25 to 50, with the exception of the pay of the Huswa thannadar, whose salary, with reference to the smallness of his jurisdiction, Mr. Muir fixed at 30 Rupees. The Thannah and Tehseel boundaries were made to coincide, and it was proposed to invest the several tehseeldars with Police powers. Three Naib thannadars, with a proportionate complement of burkundauzes, were posted at the large villages of Kudjoah, Khaga, and Tuppehjar; the duties assigned to these officers differed in no material respect from the duties ordinarily performed by the thannadar, to whose authority they were subordinate. The proceedings of the former, however, in all cases of a

* 9th Nov. 1850.

grave or heinous nature were required to be transmitted through the thannadar. In addition to these 8 Nimbut stations, 7 first-class chowkees were established in the more remote portions of the District. The officer in charge, (who was expected to be able to read and write,) was empowered to take depositions and to record proceedings, transmitting the same through the thannadar. He was likewise required to keep a diary, and to forward the same regularly, twice a week, to the Magistrate.

119. The above arrangements received the confirmation of Government on the 14th May 1845.

120. The annexed sketch map* will show the position and extent of the new Police jurisdictions, the strength and pay of the Police stationed in each, and the jumma and area in square miles of each jurisdiction. By recent orders† of Government, the tehseeldary and thannah of Bindkee, and the thannahs of Hutgaon and Huswa, have been brought upon the Grand Trunk Road, but in all other respects the arrangements made by Mr. Muir in 1845, remain in full force.

121. It was explained to the tehseeldars, on their assuming charge of their new functions as officers of Police, that the object of their appointment was not with a view to their affording any direct aid to the thannadars in the discharge of the active duties of their office, or exercising an interference in details of work, which might be equally well discharged by their subordinates, but that they were appointed, in order that they might exercise a general control over the proceedings of the thannah Police, and that they might assist them with their advice on occasions of difficulty or doubt. No single measure, perhaps, has tended so much to improve the efficiency of the Mofussil Police as the one which has placed it under the immediate control of the tehseeldar,—an officer usually of superior intelligence and tried integrity, and one, who, from the high position he occupies in the District, and the important duties which he is called upon to discharge, must necessarily possess great local influence, which, if properly directed, can never fail to operate with beneficial effect upon the several interests which are confided to his care.

122. The whole of the tehseeldars in this District have, within the last year, been invested with the powers of Assistant Magistrates, in the exercise of which new authority they have shown a perfect fitness for the trust which has been delegated to them.

123. Amongst the many measures of reform which have been introduced into the District of late years, that which relates to the improvement of the Mofussil Dawk was not the least important of the number. Up to the year 1843, the duty of forwarding all public correspondence connected with the Police was committed to the zemindars, but as they seldom felt any personal interest in the transmission of this correspondence, there was no effort made on their part to ensure regularity in regard to its despatch: it happened, in consequence, that the Thannah Reports and other important papers were frequently from 4 to 5 days on their road to the Sudder station.

---

* Appendix No. VI.

† 9th Nov. 1850.

124. In 1843, Mr. Thornton instituted a complete reform of the system, and placed the District Dawk for the first time upon an efficient footing. He considered it unfair that the entire charge of the transmission of the Dawk should be defrayed by a portion only of the zemindars of the District; with a view, therefore, of equalizing the burden, he directed a cess to be levied upon every muhal in the District, proportioning the amount to the jumma for which each estate was liable; the cess so levied falls at the rate of 1 anna and 5 pies upon every 100 Rupees of the Government Revenue. Mr. Thornton, in the next place, appointed 26 hurkaras on a fixed monthly salary of 3 Rupees, and a mohurir on a salary of 8 Rupees. The number of the hurkaras was subsequently increased to 27, and the salary of the mohurir was raised at the same time to Rupees 15. Three additional mohurirs, on a salary of 5 Rupees each, were afterwards added to the establishment by Mr. William Muir.

125. The tax levied from the landholders amounts in the aggregate to Rupees 1,260, whilst the charge for establishment, &c. amounts to 1,365; the deficiency is made up from the Postage collections, which average 30 Rupees a month, or 360 Rupees a year.

126. The Postage charged on each letter is 6 pies, and this must be paid in advance. The hour of despatch throughout the year, whether from the Sudder station or from the Mofussil, is 5 o'clock P. M., and letters are delivered on the morning following in the most distant parts of the district.

127. The subjoined Statement will show the state of the District Dawk from 1844, or the year of its establishment, up to the end of 1850:—

128. An abstract is given below of the several descriptions of offences ascertained to have been committed in the Futtehpore District from 1835 to 1849, including the quantity of property stolen and recovered. A more detailed statement will be found in the Appendix,* exhibiting the apprehensions, convictions, and acquittals during each year of the period under review. The result of the commitments is given in a separate Statement.† A Statement is also given,‡ showing the average period which elapsed in disposing of the several Criminal cases from 1846 to 1850 inclusive:—

Abstract of heinous Offences from 1835 *to* 1849 *inclusive.*

Year.	Murder.	Manslaughter.	Dacoity.	Highway Robbery.	Burglary.	Theft of every kind.	Affray.	Other Offences.	Total.	Property Stolen.	Property Recovered.	Remarks.
1835,	23	2	6	6	410	272	15	44	778	16,113	2,000	
1836,	10	2	5	3	259	197	6	51	533	11,792	1,957	(a) I am unable to explain satisfactorily the enormous increase of crime in these two years. In 1848, it was partly owing, perhaps, to the failure of the rains, which did not set in in this part of the country till the end of July. Another cause was, I believe, the daily increasing traffic along the Grand Trunk Road, for the protection of which the measures then in force were wholly inadequate. A third cause was the adoption, in this year, of a new mode of preparing the Criminal Statements, under the operation of which parties were inserted in them whom it had never before been customary to enter in the Statements; yet, after allowing for the operation of the above causes, we must still seek for some further explanation of the extraordinary increase of crime as shown in the Statements of these two years, and the only conclusion I can come to is this, that if the Statements of 1848 and 1849 be a faithful record of the offences of those years, it is to be feared that a large proportion of the offences of previous years can never have come to the Magistrate's knowledge, nor to that of the local Police.
1837,	9	2	9	9	277	309	8	57	680	13,988	2,067

It will be observed from this Table, that of the 156 persons charged with the crime of Murder, no less a number than 64 persons, or 41·025 per cent., belong to the Thakoor caste, and that 48 persons, or 30·769 per cent., belong to the Brahmin caste. In the next offence, that of "culpable homicide," the centesimal proportion which the Thakoors bear to the remaining sects far exceeds that of any other caste,—the percentage being 35·897. It will be observed, as regards Dacoity, that 51·724 per cent. of the number brought to trial for this offence were Thakoors, and that of the 19 persons brought to trial for Highway Robbery during the five years under review, no less a number than 13, or 68·421 per cent., were of the Brahmin caste; that of the 251 persons charged with Burglary, 174 persons, or 69·322 per cent., were of the Pausee caste; that of the 451 persons charged with Theft, including cattle theft, the large proportion of 182 persons, 40·354 per cent., were also of this caste; and as regards Affrays, on account of which there were 235 persons brought to trial, no less a number than 122, or 51·910 per cent., were of the Thakoor caste. The centesimal proportions which these several castes bear to the entire population have already been shown in the Table appended to the remarks on the division of castes.* From the above results it would seem then, that during the period under review offences against persons were more frequently committed by individuals of the Thakoor caste than by those of any other sect; that Highway Robberies were for the most part perpetrated by individuals of the Brahmin caste, and that Burglaries and Thefts were committed most frequently by persons of the caste called Pausees;—indeed the words "Pausee" and "Thief" have long been synonymous terms in this District.

130. The average age at which the several descriptions of offences embraced in the above Table were committed was 29; the proportionate ages of the offenders, for each year of the series, will be found in the annexed Statement.

Statement showing the proportionate Ages at which the above Offences were committed in each year, from 1841 *to* 1845.

131. The influence which education possesses, as a means of restraining men from the commission of crime, is a truth which few persons at the present day, perhaps, will be prepared to dispute; one need only turn to the published Criminal Statistics of Great Britain for the last 15 years, to be fully assured of the efficacy which even the most elementary degree of instruction is capable of exercising as a check upon crime. It is a truth, too, which is susceptible of universal application; its practical demonstration need not be sought for in England alone, or in the civilized countries of Continental Europe; it applies to every clime and every creed, and we may be assured that wherever we find a community the most highly instructed, there also we shall find the smallest amount of crime, and the least disposition to commit it. The state of education in this country, though it has made rapid strides within the past few years, is still in its infancy; and it must be many years yet before our Colleges and Schools can supply the necessary data upon which to form an accurate judgment of the degree of efficacy which an extended system of education is likely to exert as a means of restraining the natives of this country from the commission of crime.

132. I have drawn out a Statement as below, more out of curiosity than from any real value that can attach to the table itself, showing the number of persons in confinement in the Futtehpore Jail on the 30th November last, and the proportion of that number who are capable of reading and writing. The centesimal proportion of those who can read and write is 7·004: it is worthy of remark, however, that out of the 29 persons who have received even this elementary degree of instruction, *one person only* was under sentence for theft.

Statement showing the number of Persons under Confinement in the Futtehpore Jail on the 30th November 1850, *and the number of those who were capable of reading and writing.*

1.	2.	3.	4.	5.	6.	7.	8.
Description of Offence.	No. of Persons in Confinement.	Of what religious Persuasion.		Can read and write.	Cannot read or write.	The average Age of the Prisoners at the date of Commission of the Crime or Offence.	Remarks.
		Hindoo.	Mahomedan.				
Murder, ..	2	1	1	0	2	32	Of these 2 persons, one is a Brahmin and the other a Rungrez.
Manslaughter,	83	65	18	11	72	27	Of these 83 persons, 19 are Brahmins, 15 Thakoors, 12 Sheikh, and 9 Pausees. The remaining 28 belong to 15 other castes.
Dacoity, ..	27	27	0	0	27	27	These belong to 4 castes,—Aheer, Thakoor, Burboonja and Khewut; 17 are of the latter caste.
Highway Robbery,	9	9	0	0	9	28	These are of the Aheer, Pausee, Chumar, Koomar, and Sweeper castes. The Pausees are nearly equal to 50 per cent.
Burglary, ..	40	40	0	0	40	31	35 of this class of offenders are of the Pausee caste.
Theft of Cattle, ..	14	12	2	0	14	34	The Brahmins predominate, being nearly 46 per cent.

Description of Offence.	No. of Persons in Confinement.	Of what religious Persuasion.		Can read and write.	Cannot read or write.	The average Age of the Prisoners at the date of Commission of the Crime or Offence.	Remarks.
		Hindoo.	Mahomedan.				
Simple Theft,	89	77	12	1	88	27	The Pausee caste falls at the rate of 51 per cent.
Affrays, ..	34	34	0	7	27	32	With the exception of 1 person the whole of this class of offenders are of the Hindoo persuasion; 26 of the number, or 76·20, are Thakoors.
Other Offences, ..	116	106	10	10	106	39	Of these 116 offenders, 27 are of the Brahmin and 23 of the Thakoor caste.
Total, ..	414	371	43	29	385	277	
			Average Age, ..			30·910	In Cawnpore the number who can read and write falls at the rate of 8 per cent.; here it is a fraction above 7 per cent.

133. A list of the Magistrates, Joint Magistrates, and Assistants will be found in Appendix No. X.

JAIL.

134. The Futtehpore Jail is one of the best in these Provinces, both as regards the eligibility of its site and its internal arrangements: it was constructed in 1831, at a cost of Rupees 68,531. The length of the building is 567 feet, its breadth 330; it contains 12 wards, which are capable of accommodating 611 prisoners, allowing to each prisoner a space of 400 cubic feet. The inmates of the prison are classified as follows:—

Ward No. 1.— } Prisoners with labour in irons.
„ „ 2.— }
„ „ 3.— } Prisoners sentenced to labour without irons.
„ „ 4.— }
„ „ 5.— } Prisoners whose term of sentence exceeds 3 years, but is less than 10 years.
„ „ 6.— }
„ „ 7.— }
„ „ 8.—Prisoners whose term of sentence exceeds 10 years.
„ „ 9.—Prisoners without labour.
„ „ 10.—Civil Prisoners.
„ „ 11.—Female Ward.
„ „ 12.—Prisoners under trial and under commitment.

Of the prisoners at present under sentence, 79 work within the Jail and 315 outside the Jail. The inside prisoners are employed principally in grinding the flour required for the daily consumption of the Jail, in manufacturing blanket clothing for the use of the prisoners, in sweeping the wards and cells, and in keeping the Jail

yards in a cleanly and wholesome state. The women, of whom there are only at present 7 under confinement, grind their own flour, and sweep and wash the female ward. The outside prisoners are chiefly employed upon the station roads, and in watering and tending the young trees in the Government Plantation.

135. The prisoners formerly received a money allowance in lieu of rations. This system was open to objections, and has been discontinued in this District since 1836. The messing system was introduced in 1844, and has been in force ever since. Each mess consists of 20 prisoners, one cook being allowed to each separate mess. The dietary in use is given below:—

Jail Dietary.

Class of Prisoners.	Daily Dietary.							Remarks.
	Ata.	Dal.	Salt.	Wood.	Pepper.	Ghee.	Tobacco.	
	Chittacks.	Chittacks.	Madras Rattees.	Chittacks.	Geera.	Chittacks weekly.	Chittacks weekly.	
Prisoners sentenced to hard labour, ...	14	2	6 3	12	1	2	0½	Twice during the week the whole of the prisoners receive 4 chittacks of vegetables in lieu of the allowance of Dal.
Prisoners without labour, ... Prisoners under trial, Female Prisoners, ..	10	2	6 3	12	1	2	0½	

Hospital Dietary.

Articles of Diet.	Ata.	Dal.	Vegetables.	Wood.	Remarks.
	Chittacks.	Chittacks.	Chittacks.	Chittacks.	
1st Diet, ...	12	2 or	4	12	When other articles of diet are necessary, such as Meat, Soup, Sago, and the like, they are furnished by order of the Civil Surgeon.
2nd Diet, ...	10	2 or	4	12	
3rd Diet, ...	8	2 or	4	10	
4th Diet, ...	6 and 4	2 or	4	10	

136. A Statement is given below, showing the expenditure in the Futtehpore Jail, during 1849. The decrease effected in the annual expenditure, since the appointment of the Superintendent of Jails, is shown in the last column of the Statement.

Statement showing the average number of Prisoners and the average cost of each Prisoner per head per annum, during the year 1849, *and increase and decrease in* 1849 *on* 1844 *in column* 11.

137. A sketch of the Futtehpore Jail will be found in the Appendix.*

138. The health of the prisoners has been remarkably good during the past year. Upon an average strength of 499 prisoners, there were 5 deaths only, or 1 death to every 100 prisoners.

A short report on the subject of the health of the Jail prisoners, during the last 8 years, obligingly furnished by the Civil Surgeon, Mr. C. F. Warneford, will be found in the Appendix.†

139. In regard to the general character of the inhabitants of the District, I am not disposed to think favorably. The people, whether Hindoos or Mussulmans, seem to have no idea of the moral obligation of an oath. Perjury and Subornation of Perjury are in consequence prevalent offences, and will probably continue to be so, unless the law regarding the cognizance of those offences is altered, and the Magistrate is empowered finally to dispose of charges of this nature himself. The Rajpoots, who form by far the largest portion of the population of the District, are not good specimens of their class, more particularly those that reside in the neighbourhood of the Jumna. They seldom forgive an injury, and revenge is perhaps the strongest passion of their nature,—and its gratification is not unfrequently regarded by them in the light of a positive duty. A common mode to which they resort in order to avenge their real or imagined wrongs, is assassination. The chivalrous nature of a Rajpoot of the olden time would have revolted, probably, at the notion of hiring a band of assassins to waylay and murder an unsuspecting and unarmed man; but no such scruples seem to trouble the conscience of the Rajpoots of this neighbourhood, and crimes of this description are still, I lament to say, of common occurrence in the Futtehpore District. The Rajpoots, in the vicinity of the Jumna, have always been suspected of being concerned, either actively or secretly, in the plunder of boats engaged in the trade of that river; and though crimes of this description are much less frequent than they were, still I am disposed to think that there is scarcely a single case of river Dacoity that occurs in this neighbourhood which will not be found to have owed its origin to a Rajpoot zemindar. The Rajpoots have always been notorious as Revenue defaulters, and it was a common practice with them, in former days, to throw the whole of their lands waste, with a view of forcing a reduction in the Jumma of their estates.

The Mussulman classes possess few or none of the better qualities which characterize the Mahomedans of other parts. They are for the most part cringing and obsequious in their manner, and are wholly destitute of the smallest spark of independence of thought or action. The Khokurs, of Talooka Kot, alone seem to retain a lingering vestige of that chivalrous spirit which, in earlier times, formed so marked a feature in the character of the Pathan of these Provinces.

Whilst speaking thus unfavorably, however, of the mass of the people, it is pleasing to be enabled to make an exception in favor of even one class of the community; and it is impossible to contemplate the peaceable habits and indefatigable industry of the Koormees of Dhata and Ekdillah with any other feeling than that of sincere approbation,—a feeling that is rendered the more gratifying, from the marked contrast which those

* Appendix No. XI. † Appendix No. XII.

features of the Koormee character present, to the indolent and unthrifty habits of the other cultivators of the soil.

REVENUE.

140. On the 1st of July 1826, the Futtehpore Zillah was formed, by the transfer of 13 Pergunnahs from Zillah Allahabad and 1 Pergunnah from Zillah Cawnpore. The names of the Pergunnahs so transferred, and also the assessment of each Pergunnah, from the time of the cession until the formation of the new District, are given below. In regard to the balances which accrued during this interval of 25 years, the records of this office supply but little information; this and other points relative to the fiscal history of the District during the earlier years of our rule, must be sought for among the records of the Allahabad and Cawnpore Collectorates, to whose jurisdiction the Pergunnahs were then subject. It is only as regards the Pergunnahs after their separation from Allahabad and Cawnpore, that I propose to furnish some account, but before proceeding to do so, it may not be altogether out of place to glance cursorily at their condition whilst they formed part of the Districts above-named.

Statement showing the Jumma of the Settlements for Zillah Futtehpore.

141. The errors of our earlier Revenue administration, and the evils which those errors produced, are so well known, and have been so frequently commented upon, that there is no need to dwell upon them at any length in this place. They are nowhere better described than in the able paper recently published in the *Calcutta Review*, entitled the "Settlement of the Land Revenue of the North-Western Provinces." The errors there pointed out were not confined to any particular district or districts of the ceded territory. They were found everywhere throughout the length and breadth of the land, and were the consequences of a defective system, rather than the result of incapacity or mismanagement on the part of the officers who were entrusted with the administration of the Revenue.

142. In regulating the Assessment to be levied from the land, the Collector had seldom any better data to guide him than the recorded demand of previous years, and the arbitrary and untrustworthy *doul* supplied by the Canoongoes: it was rarely that

the inquiry was carried beyond these points, and when other data were sought for, the inquiry often failed through the want of means to conduct it to a satisfactory conclusion. In the absence of any accurate measurement of the villages about to be assessed, in the absence of any sufficient data upon which to determine the productive powers of the land,—without any classification of soils, and finally, without any record showing the rights and liabilities of sub-sharers,—it would indeed have been surprising if any Collector could have formed a just or satisfactory settlement. Thus settlement after settlement was made or renewed in the earlier years of our administration, and the amount of injustice and injury that was perpetrated in consequence, upon the agricultural classes throughout the country, it would be quite impossible to estimate.

143. "The evils of our early settlement proceedings," (observes the author of the paper to which I have just referred,) "were further aggravated by the measures pursued "for the realization of the Revenue. No record having been made of any sharers "besides the Lumberdars or actual engagers with Government, much less of the quota "of Revenue which each sharer was bound to pay, no attempt could be made, when "arrears occurred, to discover the real defaulter. The main expedient on which the "Collector relied, was to prevent default by keeping watchmen over the crops till the "Revenue was secured: when this failed, the Lumberdars were imprisoned, and their "personal property distrained. The next step was to put up the whole estate to sale "to the highest bidder: many of these sales were got up by the native Officers of "Government, or by their friends, who themselves became the purchasers, at a merely "nominal price."

144. The disastrous consequences of a too indiscriminate resort to the sale laws, and the mode in which the provisions of the Regulations relating thereto were perverted from their legitimate intent and object, are forcibly set forth in the preamble to the special enactment which it became necessary to frame, in order to remedy an evil, the magnitude and frequency of which, throughout the ceded Provinces,—but more especially in the Districts of Goruckpore, Allahabad, and Cawnpore,—had become a matter of notoriety. It was no easy matter, however, to repair the mischief of a long series of years by means of any single enactment, however absolute might be the powers that it conferred, and however able and diligent the officers might be who were to administer its provisions. Thus, though many of the sales which had been fraudulently effected were subsequently reversed by the Special Commission, and the lands restored to their legitimate owners, yet as regards the majority of cases, there is no doubt that the enactment came too late in the day to remedy the evil that had been done. Still, if the Regulation failed to effect all the direct good that was expected from it, it did much benefit in restoring confidence to the owners of landed property, by showing that there existed every disposition on the part of Government to protect them from hardship and injustice.

145. Forming a part, as the Futtehpore Pergunnahs did, at this period, of two of the three Districts which were particularized as being the chief scene of those abuses which the above enactment was designed to correct, it may be fairly assumed that those Pergunnahs participated, in an equal degree with the other Pergunnahs of Allahabad and Cawnpore, in the calamities which were the inevitable consequences of such abuses; the fiscal condition, therefore, of the Futtehpore Pergunnahs at this time differed in no respect from the fiscal condition of the other Pergunnahs of those Districts.

146. But a brighter day was now at hand, and the light which experience had given was not (if I may borrow the language of Coleridge) to prove in this instance a lantern, which shone only upon the waves behind us,—for few will dispute the fact, that grave as were the errors of the past, they have been amply atoned for since, by the introduction of the admirable system under which the Revenue administration of these Provinces is now conducted.

147. Within 18 months of the promulgation of the important enactment above referred to, appeared the still more important one (Regulation VII. of 1822), relating to the settlement of the Land Revenue. Perfect as this Regulation was in theory, it was not found possible to reduce it to practice; too much detail was required upon every point for which it professed to provide: accordingly, after a trial of several years, it was found necessary to modify it by Regulation IX. of 1833.

148. In this District three estates only were settled under this Regulation; the time occupied in bringing to completion the settlement proceedings in these cases was 551 days, at which rate it would have taken several centuries to complete the entire settlement of the District. The settlement of 1220 Fuslee, accordingly, continued in force until the year 1839, when the whole District was re-settled under the provisions of Regulation IX. of 1833.

149. Another step towards the establishment of a better order of things, was the abolition about this period of the practice of giving rewards to the Pergunnah Officers at the close of each year, in acknowledgment of their successful exertions in collecting the Government Revenue. In 1828 the Collector of this District, Mr. A. F. Lind, recommended rewards to the amount of Rs. 8,400 to be distributed to the different Pergunnah Officers on his establishment for their successful labors in realizing the Revenue demand for 1234 Fuslee, there being a balance only of Rs. 9,399 outstanding on account of that year. The Collector's proposal was not approved of, and shortly afterwards the system in question was directed to be abandoned, it appearing to the Governor General "that such rewards had a tendency to stimulate exertion beyond the law."—(Secretary to Government to the Sudder Board of Revenue, dated the 28th February 1828, No. 250.)

150. The balance, exclusive of Tuccavee advances, outstanding against the several Pergunnahs of the District, at the date of their separation from Allahabad and Cawnpore, amounted to Rs. 1,01,347; of this sum were realized, subsequently, Rs. 24,004; the remaining sum of Rs. 77,343 was remitted at different periods between the years 1828 and 1844.

151. In the Appendix * will be found a Table in detail, exhibiting the demand, receipts, balances, and remissions for the whole District from the year of the formation of the Zillah down to the present year. From this Statement it will be seen, that out of a total demand of Rs. 3,19,57,636 on account of the 24 years under review; Rs. 3,16,31,269, or 98-15-7 per cent., were collected within each year, and that Rs. 3,21,314, or 1 per cent. only, had to be remitted; and if the necessity had not existed for the large remission of Rs. 50,524, in 1837-38, on account of the famine

* Appendix No. XIII.

of that year, the average collections of each year of the period under review would probably have reached as high as 99-2-2 per cent. of the demand.*

152. From the above results, it will be apparent that the assessment of the fourth settlement did not press heavily upon the people; such instances of default as occurred were chiefly on the part of those landholders who were already known as wilful defaulters: for several years prior to the promulgation of Regulation I. of 1821, the sale process had become a "dead letter"; the abuses to which the sale laws had given birth, were still fresh in the recollection of the Government, and the sale of a mouza was rarely recommended and still more rarely sanctioned. The knowledge of this fact emboldened the evil-disposed to resist the just demands of the State,—demands which they would have promptly settled, had they believed that the forfeiture of their zemindaree would be the probable penalty of a further resistance to the Government claims. Another cause which operated at a later period to retard the payment of the Government demands, was the investigation then going on before the Special Commission. It was natural perhaps that a *de facto* proprietor, whose title to an estate was still *sub judice*, should object to make any further payments, until his title to the lands on account of which such payments were demanded had been formally recognized by the tribunal which was to decide upon his case: hence it was that the majority of cases of default, between the years 1823 and 1829, were on account of estates which had been made the subject of inquiry, under the provisions of Regulations I. of 1821 and I. of 1823.

153. Although the foundation of a sound Revenue system had long since been laid, and the principles upon which it was based were beginning to be appreciated by the Officers of Government throughout the country, still little or nothing had been done as yet towards reducing those principles to practice. Every branch of the Revenue Department in this District, for several years subsequent to the formation of the Zillah, continued in an unimproving state; the Dakhil-kharij file especially needed reform. I find from the records of that period, that 7 and 8 years elapsed, not unfrequently in cases of succession by inheritance, before the application for Dakhil-kharij was complied with, and the necessary entry made in the register; that in cases of transfer by sale, the average time occupied in obtaining the required mutation of names varied from 2 to 4 years; and that 9 and 10 months usually elapsed in effecting a Dakhil-kharij under an order of the Civil Court. The fees directed to be levied by Regulation XXIII. of 1803, for registering the transfers of property, had never been taken or demanded. In the Summary Suit Department few cases were decided within a less period than a twelve-month, and there were instances on record in which a case had remained for three years upon the file. Until the year 1828 the register of Putwarees, required to be filed by Section VI. of Regulation XII. of 1817, had never been kept at all. The number of estates which were annually thrown upon the Collector's hands at this period seldom amounted to less than 40. On the 2nd March 1829, the Officiating Collector reported to the Board that there were no less a number than 38 suzawuls employed in the collection of the Revenue in different parts of the District, either owing to disputes between the proprietors of estates, or in consequence of orders received from the Special Commission.

---

* A Statement of Tuccavee advances, from 1234 Fusloe to the present year, will be found in Appendix No. XIV.

154. The several Collectors appear to have applied themselves diligently to improve this state of things, and not without success; but a thorough reform, such as was needed in every branch of the Revenue Department, could only be effected at the period of the revision of the settlement which was now approaching,—but a season of severe trial awaited the District ere that event was destined to meet its fulfilment.

155. In 1837, owing to a failure of rain during the months of July, August, and September, the Khurreef crops suffered extensively throughout the District, and in the Western Pergunnahs failed entirely. From the same cause, (*viz.*, the absence of rain at the usual season,) it was impossible to plough or sow for the ensuing Rubbee, except by having recourse to well irrigation, a process which only those in good circumstances had the means of commanding. The consequence was, that the Rubbee harvest of 1838 was as deficient as the Khurreef that had preceded it, and under these circumstances it was not deemed expedient to attempt to levy the full demand of the year.

156. The Collector was called upon to furnish a detailed Report regarding the estates which had suffered from drought. Mr. Armstrong, the then Collector, reported that there were 112 estates which had suffered to such an extent as to render it necessary that a remission of Revenue should be granted. The sum proposed for remission was Rupees 50,524.

157. In summing up his Report, the Collector remarks as follows :—"The District, "however, with the exception of Pergunnah Kora, and some estates in Ghazeepore, does "not appear to have suffered more than partially; the distress of the poorer classes "has not been caused from a failure of the crops, but from the high price at which "grain was selling in consequence of the large exportation of grain to the Westward. "As far as I have been able to learn, I cannot find that the agricultural prospects of "the District have suffered to any large extent: if the produce of the two harvests "averaged less than the produce in the preceding year, the high prices at which every "description of grain has been selling, have, in a great measure, counterbalanced the "effects of the partial failure of the crops, and have enabled the cultivators to pay their "rents and the zemindars their revenue."—(Collector to Commissioner, dated 10th October 1838.)

158. The sum recommended for remission received the sanction of Government on the 10th December 1838.

159. In the year following (1839), was commenced the revised settlement of the District. This important duty was entrusted to Mr. D. Timins, an Officer of great promise, and one who had already earned distinction in the service of Government.

160. The settlement operations received a serious check at their outset, owing to an extensive combination among the Officers of the Khusrah Survey, having for its object the falsification of the Khusrah measurements. In consequence of the discovery of this conspiracy, it was found necessary to submit to the test of a most rigorous Purtal the whole of the Khusrahs that had already been filed, amounting to the large number of 854. The false entries in the Khusrah were not confined to the statements respecting soils, irrigation, and such matters, but extended to the falsification of the entries

of the malgoozaree area. As an example of the extent to which these fraudulent practices had been carried, Mr. Timins gives the following instances:—

"There were six villages in Pergunnah Hutgaon, which happen to fall particularly "under my observation. Their joint areas contain, according to the Khusrah measure-"ment, 21,516 acres. Of this only 6,699 acres are classed as cultivation, whilst the "immense proportion of 12,828 acres is entered as barren waste. The total Jumma of "the six is 22,273 Rupees, and if the above measurement was correct, the average rate "per acre on cultivation of the present Jumma would range as high as Rs. 3-5-6 per acre, "yet these villages, so far from being over assessed, yield, it is notorious, a handsome in-"come to their possessors."—(Settlement Officer to Commissioner, dated 13th July 1839.)

161. Having repaired the mischief that had been done in the Survey Department, by a rigorous Purtal of the whole District, and by re-measurement of the lands of those estates in which error or fraud was found or was suspected to exist, the Settlement Officer, within little more than 3 months from the date of the first discovery of the above frauds, reported himself to be in a position to commence upon the assessment of the District.

162. The system which Mr. Timins adopted in the performance of this duty, is best described in his own words.—"Of the system of settlement" (says Mr. Timins), "which "I had resolved to adopt, personal inquiry and observation formed the basis. With this "object in view, I had prepared skeleton maps of each Pergunnah, in which the boundary "and name of every mouza was entered. Taking this map with me as a guide, I tra-"versed a whole Pergunnah, visiting each mouza as nearly as possible, and entering my "remarks and opinion of its general prosperity, the prevailing quality of soil, the "extent of irrigation, the description of produce, the appearance of the crops, together "with such other information as I was able to obtain from the kashtkars and others, "relative to rates, &c. &c. I found this system afforded me a clearer insight into the "actual condition of an estate, and gave me a better idea of its general capabilities "and of its prosperity, or the reverse, than I could arrive at by any other method."

163. With a view of assisting him in determining the very important question of the assessment, Mr. Timins had, upon his first arrival in the District, directed to be prepared, under the superintendence of the present Tehseeldar of Futtehpore, an Abstract Statement, exhibiting a detail of the former Jumma, the area, quality of soil, irrigation, produce, and other requisite particulars of each village. The Jinswar Teeruj, which formed part of this statement, he found especially useful; the entries of crops were almost invariably found to be correct; "and a reference to this paper enabled me," observes Mr. Timins, "at once to discover any errors or false entries made by the Ameens under "the head of Soil or Irrigation. * * I was perfectly able," he continues, "to draw out a "very correct jummabundee of a muhal by a reference to the crops alone, fixing a "certain rate per beegah on each description of produce, in the same manner that a "rate is assumed for each different kind of soil, irrigated or unirrigated. I found the "gross assets, calculated in this manner, approximated very closely indeed to the amount "of the same calculated on soils when the latter were correctly given in the Khusrah. "In cases where any great difference occurred, it was evident there was error, and an "examination would almost always show that the soil or irrigation had been under-"rated."—Settlement Report.

164. The financial result of the settlement was an increase of Rupees 91,231, or somewhat less than 6 per cent. on the former Jumma, including resumed Mafee.

165. The Settlement Report furnishes no detail respecting the area or assessment of the lakhiraj lands, but the omission was subsequently supplied, as far as was practicable, by Mr. John Thornton, on the occasion of the revision of the settlement.*

166. The lately concluded settlement was received by the people with feelings of great dissatisfaction, and the number of petitions on the part of the zemindars, complaining of the severity of the assessment, which were already before Government, induced the Lieutenant-Governor to withhold his confirmation of the settlement, till it could be ascertained by further inquiry whether there existed any reasonable grounds for the objections which had been raised to the assessment.

167. It was fortunate for the interests of the people of the District, that the duty of conducting an inquiry of so delicate a nature as the one in question was entrusted to an Officer of such distinguished reputation as Mr. John Thornton.

168. The first step which Mr. Thornton took, was to endeavour to trace the causes which had operated to make the settlement so generally unpopular with the people as it undoubtedly was.

169. Mr. Thornton ascribes the unpopularity of Mr. Timins's assessment to the following causes :—

1*stly*,—The comparative lightness of the assessment in the neighbouring District of Allahabad, and the reductions which of late years had been granted in the neighbouring province of Bundelcund.

2*ndly*,—The proportion which the general demand upon the District bore to its resources was so high, that it was hardly possible, considering the rapid manner in which the settlement was conducted, for the Settlement Officer to avoid pressing with undue severity in many individual instances. The rate at which the aggregate demand fell upon the cultivated area was 2 rupees, 12 annas, 9 pies per acre,—a rate, observes Mr. Thornton, which is higher than any that is to be found in these Provinces.

3*rdly*,—The partial failure, for several consecutive seasons, of the Rice cultivation, the staple produce of the District.

4*thly*,—Owing to the declining state of the District during the several past years, its productive powers had retrograded; the cultivators had become impoverished, or had migrated elsewhere; and the zemindars had lost their capital, which was the only means which could have enabled them to remedy the evil. The combined effect of these causes was the continued unproductiveness of land that was capable of yielding a good return, the depression of rent rates † below a fair and proper standard, the constant

---

" * As regards the extent of lakhiraj land brought on the rent-roll for the first time at settlement, two " whole villages, containing by measurement 2,676 beegahs and 10 biswas, and assessed at 1,762 Rupees, were " resumed previous to settlement; the detached portions of resumed land were registered as containing in the " aggregate 17,267 beegahs, but neither their area by the new measurement, nor the Jumma realized from them, " can be accurately stated, as some of these tenures are not to be traced at all in the measurement papers, and " many were thrown into the Khusrah with no separate Jumma attached. The total assessment of the two " mouzas and the detached lands, as far as can be traced, is Rupees 12,266-4-6."—(Officiating Collector to Commissioner, dated 7th November 1843.)

† "Last year," writes Mr. Thornton, "I went over a great number of estates, examining closely the rate " paid upon particular fields, and I had abundant proof that the amount of rent depended less upon the quality " of soil than upon the relative position of the zemindar and the cultivator to each other."—(Officiating Collector's Report on the revision of Settlement, dated 7th November 1843.)

threat held out by the cultivators to their landlords of throwing up their fields, and the difficulty experienced by the latter in realizing the full amount of their dues.

5thly,—Errors in the measurement both as regarded the returns of irrigation and the extent of the malgoozaree area.

6thly,—Another point which tended to mislead the Settlement Officer in regard to the extent of the cultivated area, was this;—It is the custom for the cultivators, in many parts of the Futtehpore District, to hold a certain portion of their lands rent-free. Such fields are called "Churree," and are commonly sown with some inferior Khurreef crop, which is cut down and given to cattle before it arrives at maturity. Old groves, in which the trees have fallen, are frequently assigned in this mode, and they were invariably measured as "cultivated." The addition of these lands, under the head of Cultivation, would necessarily have the effect of making the assessment appear lighter than it really was, and the objections raised to the revised assessment, observes Mr. Thornton, generally had reference to the unproductive character of these lands.

170. To the above causes Mr. Thornton attributed, in a great degree, the feelings of discontent which the result of the revised settlement had produced in the minds of the people whose interests were affected by it, and also the extreme difficulty which had been experienced in realizing the Government demand since the settlement took effect. The number of estates and puttees, which, owing to recusancy or other cause, had passed from the hands of the original owners, from the commencement of the Settlement till the revision by Mr. Thornton, is shown in the margin.

Mode of Dispossession.	No. of Muhals or Puttees.
By recusancy at settlement, ...	16 Muhals.
By sale for arrears accruing before settlement,	11 Muhals and Puttees.
By sale for arrears accruing after settlement,	18 Muhals.
By farm since, ...	46 Muhals.
By transfer since, ...	38 Puttees.

171. Having fully satisfied himself that the terms which Mr. Timins had imposed upon the District were beyond what it was capable of bearing, Mr. Thornton immediately directed his attention to those cases in which he had reason to believe that the assessment pressed with the greatest severity.

172. The result of the revision was a recommendation for a reduction of Revenue in 214 muhals, amounting in the aggregate to the sum noted in the margin,* to have effect from 1251 Fuslee, and a remission of Rupees 6,269-7-5, on account of the arrears that had accrued during the first three years of the settlement. Mr. Thornton's recommendation received the confirmation of Government on the 20th June 1844, No. 2304, and the settlement, as amended by that Officer, was confirmed by Government for a period of 30 years, from 1248.

and till close of settlement.	

* "The course pursued by the Surveyor," observes Mr. Thornton, "appears to have been a most peculiar "one. If upon comparing the total area, according to his own professional survey, with that of the Khusrah "ameen, he found the former to be less than the latter, he directed that the excess should be struck out of the "barren waste as set down in the Khusrah; but if the discrepancy lay the other way, and the total of the "Khusrah was less than that of the Survey, he equalized them by adding the necessary number of beegahs to "the cultivation as given by the ameen."

173. Of the judicious way in which Mr. Thornton prosecuted the delicate task of revising the Settlement Officer's proceedings, there can be no better proof than in the facility with which the Government demand has been since realized. The annexed Statement will show the extent to which recourse has been had to coercive measures in each year for the realization of the Revenue, from the year of the revision down to the present time.

177. The following Statement exhibits the Treasury transactions during the same year:

Treasury Statement.

| RECEIPTS. | | |

178. A Statement of the Receipts on account of the sale of Stamps, from 1826 to the close of 1850, will be found in the Appendix.*

179. The District of Futtehpore possesses the same facilities for Export and Import as the adjoining District of Cawnpore. It is traversed from East to West for a distance of 56 miles by the Grand Trunk Road, and the Ganges and Jumna form its Northern and Southern boundaries respectively; and an excellent metalled road, upwards of 30 miles long, affords an uninterrupted line of communication between the Ghaut of Chillatara on the Jumna and that of Bhitora on the Ganges. Another metalled road, 32½ miles long, runs from Futtehpore to Kora Jehanabad, passing through the large towns of Bindkee and Kudjwah. As this line of road is much frequented, being the chief thoroughfare from the Eastward to the large cities of Etawah and Agra, it is to be hoped that the Local Committee of Cawnpore will take an early opportunity of extending the line in question through their jurisdiction.

180. Besides the above lines of roads, there are innumerable unmetalled roads which intersect the District in all directions. These are under the superintendence of the Magistrate, and are kept in repair at an annual cost of about Rupees 500.

181. Before the revision of Settlement under Regulation IX. of 1833, the zemindars were compelled to keep in repair all the roads passing through their several estates. This arrangement was open to objection, and, in commutation of the obligation which formerly attached to them, the land-holders now pay a percentage of one per cent. on the Government Jumma, for the construction and repair of the District roads. The percentage so levied amounts to Rupees 14,249-10-11, which, together with the annual allotment made from the surplus Ferry Funds, forms the fund that is placed at the disposal of the Local Committee. The names of the Members who constitute the present Committee are noted in the margin.

R. Lowther, Esquire, ...	President.
C. W. Kinloch, Esquire, ...	Vice-President.
G. S. Benson, Esquire, ...	Member.
C. F. Warneford, Esquire, ...	Ditto.
Hickmutoollah Khan, ...	Ditto.
Baboo Bulramdoss, ...	Ditto.
Chowdree Ahmad Yar, ...	Ditto.
Lala Jowallah Pershaud, ...	Ditto.
T. W. Seyers, Esquire, ...	Secretary.

182. In the Appendix† will be found a Statement showing the operations of the Committee, from the time of their first assembling in 1841 down to the close of last year. From this Statement it will be seen that the large amount of Rupees 2,08,878 has passed through the hands of the Committee during the last 10 years; that the Committee have constructed 64½ miles of metalled road, and have bridged the same with 82 bridges, at a total cost of Rupees 1,30,714, which falls at the rate of Rupees 2,026-9-2 per mile. In addition to these works, it will be observed that they have constructed several serais, supply-houses, and other works of public utility, and that the average annual cost for Establishment, during the period under review, was Rupees 2,640-5-1.

183. I have given in the Appendix‡ a Statement showing the traffic upon the Grand Trunk Road, from the 15th November 1850 to the 15th November 1851. The entries in the Register have been made with great care, and I have every reason to

---

* Appendix No. XV. † Appendix No. XVI. ‡ Appendix No. XVII.

believe that they are quite accurate. Two positions upon the road were selected, one to the East, and the other to the West, of the town of Futtehpore. At each of these localities I posted four chuprassies, who relieved each other alternately, day and night: an intelligent mohurir was also attached to each location. The traffic, &c., proceeding from the Eastward was registered at the Eastern station; the traffic from the Westward was registered at the other or Western station.

184. The plan which I adopted was exceedingly simple. Several earthen vessels, of different sizes and shapes, were collected at each station, and as many as were required for immediate use were ranged in a row at the edge of the road, and at the end of each row was placed a heap of kunkur broken into small pieces of the size of an ordinary pebble. Upon each vessel was drawn a rough sketch of the animal or vehicle, or thing to be registered,—for example, one vessel exhibited a drawing of an elephant, a second that of a camel, a third that of a bylee, and so on. The chuprassy on duty, therefore, had nothing to do but to note the kind of vehicle or animal that was passing, and drop a piece of kunkur into the particular vessel by which such vehicle or animal might happen to be represented. The mohurir's duty was to count the contents of each vessel, and enter the same, twice a day, in his written Register.

185. A Statement is given in the Appendix* showing the chief Imports and Exports of the District, so far as it has been able to ascertain them. The Statement in question is not based upon any official documents, there being none, but it has been drawn out from Returns furnished by the Pergunnah Officers, which have been prepared with considerable care and with the aid of the most experienced merchants in the District.

186. Mr. William Muir's excellent Report† upon the State of Education in the Futtehpore District has been for some time before the Government. The Report in question enters so fully into every particular of the subject, that it only remains for me to note the subsequent changes which have occurred in the different pergunnahs in respect of the number of schools and scholars as reported by Mr. Muir in 1846.

* Appendix No. XVIII.

† Appendix No. XIX.

187. The following Statements show the changes that have since taken place in each Tehseeldaree Division of the District:—

Statement showing the State of Education at the close of the year 1845.

Tehseeldaree.	Area in Square Miles.	Population.	Hindee.		Persian.		Sanscrit.		Formal Arabic.		English, Persian and Oordoo.		Total.	
			Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.

188. It will be seen from the above that the English school, which at the close of 1845 numbered 37 scholars, has ceased to exist. The causes which led to the abandonment of the school, were the inadequate support afforded to the institution by the Native residents, and the frequent changes of office among the European residents, circumstances which rendered it impossible to provide the requisite funds for the maintenance of the school.

189. A list of the different Officers appointed to conduct the Revenue business of the District, will be found in the Appendix.*

190. The Revenue records have all been arranged in conformity with the instructions issued by the Sudder Board in their several Circular Orders on the subject, and any paper that may be required can now be traced in a few seconds, by reference being made to the Abstract List of cases of the particular mouzah to which the paper sought for has reference.

* Appendix No. XX.

191. Any person who may be desirous of consulting the records, is at liberty to do so in the presence of the record-keeper, or in that of one of his assistants, on payment of a fee of 8 annas for each hour that he may need the services of the Record-Keeper or his mohurir; he is permitted, while engaged in such inspection, to take pencil notes of any paper or papers he may wish for without any charge being made, but should he desire to have his notes authenticated, he is obliged to pay the usual fee to the copyist whom he may employ.

192. A Statement of the business instituted, disposed of, and pending in the Futtehpore District during the year 1849-50, will be found in the Appendix,* as also a Statement of the Receipts on account of Land Revenue and all other collections, and the percentage of charges on Receipts.†

TENURES.

193. The Land Tenures of these provinces may be traced back to those primitive times when the tide of population, which flowed in an Easterly direction for so many successive centuries, from the countries West of the Indus, gradually filled the whole of the Gangetic valley with the followers of Hindooism, and finally established the sway of the Hindoos over the entire Continent of India.

194. Commencing their first migrations to the Eastward under Ikswakoo, the founder of the Solar race, and the earliest Hindoo monarch of whom we have any record, and terminating those migrations only when the rise of Mahomedanism in Northern Asia precluded all further advance from that quarter, tribe after tribe, and race after race of the great Hindoo family, each with its own peculiar notions of religion, and characterized by its own peculiar habits, prejudices, and customs, continued steadily to pour across the Indus, settling themselves at first only in the rich valley of the Ganges, but afterwards spreading, till in the course of time they occupied the whole face of the country, from the Himalayeh range to Cape Comorin.

195. Locating themselves under their respective leaders, in various parts of the country, according as fancy or conquest might have happened to dictate, these rude emigrants of the North still continue to retain, after a lapse of many centuries, all the different religious, social, and domestic habits, which were characteristic of the clan in the earlier period of its existence.

196. It was their custom, so soon as they had acquired a firm footing in the soil, to portion out amongst the different families of their community, the tract of country of which they had recently made themselves the masters. The ancestral shares thus allotted, together with all the rights and privileges they conferred, were handed down from generation to generation, and even in times the most unsettled, and under every form of government, the properties thus acquired have usually been regarded as sacred by the ruling power. Out of this simple system arose, in process of time, the famous proprietary communities so common in these provinces; bound together by the same ties of attachment to the soil, and possessing the same rights and privileges in the land, the proprietary brotherhood have, in every age, made common cause with each other in

* Appendix No. XX. A. † Appendix No. XXI.

support of their mutual interests. To this combination amongst themselves more than to any other cause, perhaps, did they owe the strength which has enabled them successfully to encounter the frequent perils to which, in earlier and more unsettled times, they were so constantly exposed;—like the bundle of sticks in the fable, which could not be broken when bound together, so neither could the stability of these rural communities be entirely destroyed, whilst their members held firmly together in defence of each other and their mutual rights.

197. The inhabitants of this District were formerly Aheers, Koormies, and Lodhas, and in ancient times these were the principal land-holders, but they have been gradually dislodged by the different tribes of Rajpoots, who, at a later period and at various times, overran the whole of this part of the country. The classes above-named are still found, however, in considerable numbers in the District, but with few exceptions they now occupy the position only of cultivators of the soil.

198. I annex an Abstract Statement, showing the several kinds of tenures that exist in the District, and the number of villages appertaining to each class.* The zemindaree form, it will be observed, very greatly predominates over the other three; this is to be ascribed in a great measure to the circumstance of the numerous sales and transfers of property, which were fraudulently brought about during the first few years of our administration of the country, and which had the effect of transferring the proprietary rights of communities to the hands of individuals.

Zemindaree Villages.	Pure Putteedaree Villages.	Imperfect Putteedaree Villages.	Byachara Villages.	Total.
1,231	97	268	18	1,613

199. From the cession until the year 1808-9 the Revenue management of the several pergunnahs comprised in this District was entrusted to Nawab Bakir Ali Khan, who received 10 per cent. on the collections of each year. I find, from the records of that period, that during the six years of the Nawab's administration, himself and his family acquired possession, either by sale or by farm, of no less a number than 182 estates, paying an annual jumma of Rs. 2,56,287. Most of the villages so acquired, however, have returned into the hands of the original zemindars, under the operation of the Special Commission enactment, and the descendants of the once powerful Bakir Ali Khan, at the present time, own only 10 villages in the District, paying a jumma to Government of Rupees 27,426.

200. I subjoin a Statement showing the number of suits which were preferred, under the Provisions of Regulations I. of 1821, and I. of 1823, for the reversal of fraudulent sales and other transfers of landed property, effected during the earlier years of our rule. From this Statement it will be observed, that out of 207 suits arising out of sales by public auction, decrees were obtained in 176 cases, and in 31 cases the claim was dismissed; that out of 92 claims for the reversal of private sales, 27 decrees were obtained, and in 65 cases the claim was dismissed; that out of 9 disputed mortgages, 2 cases were decreed, and 7 dismissed; and that out of 253 suits preferred for the annulment of settlements made with parties having no proprietary title, 85 decrees were given, and in 168 cases the claim was dismissed.

* Appendix No. XXII.

Sonars,	0	Sonars,	2
Kham Tehseel,	7	Kham Tehseel,	0
Total,	1613	Total,	1613

202. From the above Statement it will be seen that the Rajpoots have declined more than any other class since the cession, whilst on the other hand, the Brahmins, and the money-dealing classes generally, have been steadily increasing their landed property in all parts of the District. It is a curious fact, and proves the growing tendency that exists on the part of the monied classes to invest capital in land, that at the accession of our Government the 4 Mahajunee classes, noted in the margin, held not a single estate, whereas the number of villages now held by them amounts in the aggregate to 85.† The Moosulmans occupy pretty much the same position as landed proprietors, as they did 50 years ago;—the same remark may be applied to the Kayusths. The Koormies and the Lodahs have lost 57 of their villages. The remaining classes require no particular notice.

Buqqal.
Khuttree.
Rustogee.
Ugurwala.

203. The number of proprietors of land, the average quantity of land possessed by each, and the average amount of Revenue which each proprietor pays, are given in the annexed Abstract Table.‡

No. of Proprietors.	Total Area of the Estates in Acres.	Total Assessment of the District.	Average amount of land owned by each Proprietor.	Average amount of Revenue paid by each Proprietor.
	Acres.	Rupees.	Acres.	Rs. As. Pic.
14,402	10,10,364	14,29,237	70·2	99 3 10

* *Vide* Appendix No. XXIII. † *Vide* Appendix No. XXIV. ‡ Appendix No. XXV.

204. The number of proprietors, as shown in column 1 of the Statement, is 14,402; the quantity of land cultivated by them is 74,279; the number of hereditary cultivators is 52,713; and the quantity of land they cultivate is 3,12,631 acres: the non-hereditary class number is 31,623, and the quantity of land they cultivate is 1,18,114 acres.*

205. Each proprietor cultivates on an average, ...	5·1 acres.
Each hereditary cultivator, „ „	5·9 ditto.
Each non-hereditary cultivator, „ „	3·7 ditto.
The average cultivation of all three classes is	4·9 ditto.

206. A Statement will be found in the Appendix,† showing the prices paid in each year from 1844-45 to 1850-51 inclusive, for lands sold by public auction for arrears of Revenue or by order of the Civil Court, and by private sale as far as these latter sales could be ascertained.

207. In the Appendix‡ will be found a Statement exhibiting the number and names of the several classes forming the agricultural portion of the population, as ascertained at the time of the census in 1848.

208. A Register of the villages of each pergunnah will be found in the Appendix, also a Sketch-map§ showing the Tehseeldaree Divisions.

ABKAREE,

OR

EXCISE UPON SPIRITUOUS LIQUORS, & UPON INTOXICATING DRUGS.

209. The Sayer Revenue, of which the Excise formed no inconsiderable item, was, under the Native Governments, collected along with the Land Revenue. Under our Government it is different, the Excise being a distinct department entirely, though the management of it is usually entrusted to the Collector of the Land Revenue.

210. The system in force for the administration of this branch of the public Revenue is explained in Regulations X. of 1813 and VII. of 1824. By those enactments the Officer in charge of the Abkaree muhal is empowered to issue search-warrants for the discovery of unlicensed stills, or the produce thereof, and the same Officer is also empowered to punish, by a fine not exceeding 500 Rupees, or by imprisonment in the Civil Jail for a term not exceeding 6 months, all persons whom he shall convict of the

* The number of hereditary and non-hereditary cultivators entered above, and in Statement Appendix No. XXV., includes those only whose names are entered in the putwarees' registers. If the Shikumee and unregistered cultivators be taken into account, the number of cultivators of each class would probably be double the number here given.

† Appendix No. XXVI. ‡ Appendix No. XXVII. § Appendix No. XXVIII.

illicit manufacture or sale of spirituous liquors or intoxicating drugs, inclusive of opium.

211. The principal articles that are liable to be taxed under the Abkaree laws, are—

1. Spirits manufactured after the Native method.
2. Spirits manufactured after the European method.
3. Taury, or the juice of the palm tree.
4. Bhang, or other intoxicating drug manufactured from the hemp plant.
5. Opium, whether in a dry state or infused in water or any other fluid.

The whole of these, with the exception of spirits manufactured after the European method, are made and sold in this District.*

212. The first Abkaree settlement was made for 1234 Fuslee; each shop was separately assessed and the Jumma of that year was fixed at Rupees 79,287-4-1. The following establishment was sanctioned:

1	Darogah, ...	Rupees	80
1	Wasil-bakee Navees, ...	„	20
4	Mohurirs, ...	„	42
	Sayer Khurch, ...	„	10
20	Chuprassies, ...	„	80
	Total, Rupees, ...		182

213. The above establishment was maintained until 1237 Fuslee, when, by order of the Commissioner, the whole of the omlahs were discharged, excepting the mohurir, and the collections were entrusted to the tehseeldars, who received a percentage of 2 per cent. on the collections of their respective divisions. In 1243, the Kham system was given up, and the settlement was made Pergunnahwar. In the year following, (1244 Fuslee,) the entire muhal was let in farm, and the commission hitherto granted to the tehseeldars was discontinued. The Moostajree system continued in force until 1848-49, when the plan of Kham management was again resorted to, and with the most marked success,—the Revenue being raised from Rupees 58,468 in 1847-48 to Rupees 76,598 in 1848-49. In the following year, 1849-50, the Jumma was Rupees 69,619. In 1850-51, it was Rupees 72-965, and the demand for the current year, 1851-52, has just been fixed at Rupees 75,864.

214. The collections are managed by a Native Superintendent, who receives commission as noted below:

On collections up to 1,200 Rupees, ... 5 per cent.
On collections exceeding 1,200 Rupees and up to 1,600 Rupees, 7 ditto.
On collections exceeding 1,600 Rupees, ... 10 ditto.

The above commission is intended to cover all expenses of establishment.

* The only articles from which spirituous liquors are distilled in this District, are, the Mohwa blossoms and Goor. Three kinds of liquors are made, called "Rassee," "Subcheea," and "Phool;" the latter kind is the strongest, and therefore the most expensive.

215. The Statement given below will show the proportion which the average collections of the last 4 years bear to the Jumma, area, and population of the District. It will be seen from this Statement, that 1 Rupee of Abkaree Revenue was collected for nearly 22 Rupees of Land Revenue from nearly 8 people, and for every 15½ acres of land. A Statement of the demand, collections, and balances from 1826–27 to 1850–51 will be found in the Appendix.*

District.	Average of Abkaree Collections of 4 years, ending with 1847–48 and ending with 1850–51.	Average District Jumma of 4 years, ending with 1850–51.	Population according to Census of 1848.	Area in Acres.	Proportion of Abkaree Collections.

JUDICIAL.

216. Before the formation of the Futtehpore District in 1826, the several Thannas comprised within it were subject to the authority of the Civil Courts of Allahabad and Cawnpore, 6 being included in the former zillah, and 4 in the latter zillah, as shown below :—

Subject to the Allahabad Civil Court.

Thannahs { Futtehpore. Ghazeepore. Huswa. | Thannahs { Hutgaon. Kishenpore. Kurrah.

Subject to the Cawnpore Civil Court.

Thannahs { Bindkee. Kudjwah. | Thannahs { Kora Jehanabad. Amowlee.

217. In 1814, the state of the Police having rendered it necessary that a Covenanted European Officer should reside within the limits of these Thannahs, Mr. G. J. Middleton, the 2nd Register of the Allahabad Court, was deputed to Futtehpore, and invested with the powers of a Joint Magistrate within the several Thannah Divisions lying between the towns of Kora and Kurrah. Mr. Middleton drew a salary of Rs. 500 per mensem, and his Civil jurisdiction extended to suits not exceeding in value Rs. 500.

218. In 1823 Mr. Nisbet, the 1st Register of the Allahabad Court, was deputed to Futtehpore on a salary of Rs. 1,000 per mensem, and with power to adjudicate on claims to the amount of Rs. 1,000.

219. At this period there were 5 Moonsiffee Divisions.

The 1st Division comprised Pergunnahs,.. { Futtehpore and Huswa.

The 2nd Division comprised Pergunnahs,.. { Hutgaon, Dhata and Kotlah.

* Appendix No. XXIX.

The 3rd Division comprised Pergunnahs,.. { Kurrah, Kishenpore, and Ekdillah.

The 4th Division comprised Pergunnahs,.. { Ghazeepore, Ayah Sar, and Matour.

The 5th Division comprised Pergunnahs,.. { Bindkee, Tuppehjar, Kooteah, Gooneer, and Kora.

220. By Regulation XXIII. of 1814, the Officers in charge of these Divisions were empowered to try all suits for money, or other personal property not exceeding in amount or value the sum of 64 Rs. receiving, as remuneration for their services, certain stamp duties, ranging from 1 to 4 Rs.

221. By Regulation II. of 1821, the jurisdiction of the Moonsiffs was extended, and they were empowered to try suits to the extent of 150 Rs.

222. In 1824, Serajool Husun was appointed a Sudder Ameen at Futtehpore, on a salary of 100 Rs., with 30 Rs. for establishment; the jurisdiction of this Officer was limited, by Regulation II. of 1821, to suits of the value of 500 Rs.

223. In September 1826, the Futtehpore Zillah was formed by the transfer of 6 Thannahs from Allahabad, and 4 from Cawnpore, and Mr. Walker was appointed to the joint office of Judge and Magistrate; the limit of the Judge's jurisdiction at this period was 10,000 Rs. The appointment of a Law Officer on a salary of 100 Rs., and a Pundit on a salary of 60 Rs., were amongst the arrangements that took place on the formation of the new Zillah Court: these Officers were invested with the same powers as were ordinarily exercised by a Sudder Ameen.

224. After the promulgation of Regulation V. of 1831, the Courts of the Sudder Ameens and Moonsiffs were re-modelled. Of the 5 Moonsiffs who held office in the District, 3 only were retained, and in lieu of the Sudder Ameens, a Principal Sudder Ameen was appointed, on a salary of 400 Rs., with an allowance of 100 Rs. per mensem for establishment. The salary of the Moonsiffs was fixed at 100 Rs. each, with 30 Rs. for establishment.

225. The services of the Pundit above referred to were dispensed with in 1837, but the services of the Law Officer were retained until the early part of the present year. In 1837 an additional allowance of 50 Rs. was granted for the establishment of the Principal Sudder Ameen, and the allowance for establishment for the Moonsiffs was also raised from 30 Rs. to 40 Rs. In the year following (1838), the salary of the Moonsiff of Hutgaon was raised from 100 to 150 Rs. In 1848 the Moonsiffee Cutcherry at Jehanabad was transferred to the town of Bindkee, as being a more central and convenient situation for the Moonsiff's Court. In July of last year this Court was abolished, and the business appertaining to it made over to the

Moonsiff at Futtehpore. One Pergunnah of Futtehpore Division, (Ghazeepore,) was at the same time annexed to the Division of the Moonsiff of Hutgaon.*

226. A Statement of the different Civil Courts of each grade, as at present constituted, will be found below:—

No.	Office.	Jurisdiction.	Allowance.	
			Salary.	Establishment.
1	Judge.	Unlimited.	Rs. 5,500	Rs.
1	Principal Sudder Ameen, ...	Limit of ordinary jurisdiction, Rs. 5,000.—In cases referred to him by superior authority, no limit to jurisdiction, ...	400	150
2	Moonsiffs, ...	..... Rupees 300	100	40

227. I regret that I am unable to supply any information in regard to the state of the Civil business previous to the formation of the District in 1826. My own office, of course, can throw no light on the subject, and, on reference to the Judge, I find that the records of his Court afford no information whatever, relative to the state of business prior to the year 1826.

228. In the annexed five Statements, obligingly furnished by the Judge, will be found the fullest information regarding the state of the Civil business of the District, from the date of the first formation of the Judge's Court, in 1826, down to the close of the year 1849; and in the Appendix† will be found a detailed Statement of the different descriptions of Original Suits instituted before the European and Native Judges of the District, from 1837 to 1849 inclusive. A list of the Judicial Officers is given in the Appendix.‡

* A Sketch of the Moonsiffee Divisions as at present constituted will be found in the Appendix No. XXX.

† Appendix No. XXXI. ‡ Appendix No. XXXII.

No. 1.

Statement showing the Number of Appeals and Original Suits, pending, instituted, and disposed of, in each year, by the Dewanny Adawluts of Zillah Futtehpore, from the 1st September 1826 to the end of the year 1849.

No. 3.

Statement showing the Value of the Appeals and Original Suits which were pending at the end of each year in the Dewanny Adawluts of Zillah Futtehpore, from 1826 *to* 1849.

1.	2.	3.	4.
Year.	Value of Original Suits.	Value of Appeals.	Remarks.
1826	2,22,946	28,745	This Statement shows a great falling off during the last few years in the value both of the Original Suits as well as the Appeals that were pending at the close of those years. This does not necessarily prove that there has been a corresponding decrease in the number of Suits instituted and appealed. There has been, nevertheless, for some years past a gradual diminution in the civil business of the Zillah, as will at once be apparent on referring to the 1st of the 5 Statements here given. The decrease is chiefly observable from the year 1840, and the following causes have been assigned in explanation of it: *1st*,—the transfer of a large number of villages, in 1841, to Zillahs Allahabad and Cawnpore; *2ndly*,—the adjustment of boundary disputes under the operation of Regulation IX. of 1833; *3rdly*,—the paucity of wealthy and influential Mahajans in the Futtehpore District, and *lastly*, the fact of money-lending having, of late years, become much less profitable to the Mahajan than was the case formerly.

229. From the above Statements it will be seen, that from the 1st of September 1826 till the close of the year 1849, the number of Original Suits that had been instituted in the different Civil Courts of this Zillah amounted to 27,823, of which 27,611 had been disposed of and 212 remained for investigation; and that the number of Appeals preferred from the subordinate Courts was 4,576, of which 4,550 were disposed of and 26 remained for trial.

230. The provisions of Regulation V. of 1831 were introduced into this Zillah at the close of 1832: the effect of this important enactment upon the state of the Civil business in this District, may be gathered from the annexed comparative Statement of the state of the Civil business at the close of the years 1832 and 1849 respectively.

State of Civil Business at the close of 1832.

231. A list of the Judges of the Futtehpore Court will be found in the Appendix.*

232. Having briefly sketched, so far as circumstances and my own imperfect ability for the task would permit of my doing, the past and present history of the District, and having brought under notice the several departments of public Administration connected with it, it only remains for me, in conclusion, to append a few brief remarks which shall serve to elucidate the present and previous condition of the Pergunnahs which constitute the District; to this task I now proceed to address myself.

* Appendix No. XXXII.

PERGUNNAH KORA.

233. It is not known when or by whom this Pergunnah was named, neither is the meaning of the word "Kora" very apparent: as the Pergunnah, however, originally formed part of the Kingdom of Canouj,—and as the term "Kora," whatever its signification may be, was the patronymic of the kings of Canouj at the period of the invasion of the country by Sultan Mahmood, in A. D. 1018,—it is not impossible that the Pergunnah may have been so called by one of the Kora princes of Canouj.*

234. The Gowtum Rajpoots of the Pergunnah assert that the whole tract of country lying between Canouj and Kurrah was formerly in their possession; Raja Gunput Singh, who still resides in the Pergunnah, and who is the present representative of the tribe, gives the following account of the clan:—"It is related that many centuries "ago, when the Guhurwar Rajpoots were in power, and Jye Pal was king of Canouj, one "Ringeerikh, a Rajpoot, and a descendant in the sixth generation from Gowtumrikh, of "Mouzah Argul in this Pergunnah, was invited to Court, where he met with much "favor, and finally obtained the hand of the king's daughter in marriage, and along with "her, an extensive jagheer comprising the whole of the country from Canouj to Kurrah; "It is further stated on the authority of a pooshtuamah in the possession of Gunput "Singh, that 22 generations since, Raja Oulung Dèo, by whom the family was then repre-"sented, was one day coursing in the neighbourhood of Kora, when he observed to his "attendants, in reference to the flinty nature of the soil, that such a spot was well suited "for the abode of soldiers, whose hearts, he remarked, should always partake of the nature "of such a soil. The Raja accordingly built a fort there, which he called "Kurrah" (hard). "In this fort the descendants of the family resided for many generations in the greatest "prosperity, until the time of Homayoon, when the head of the clan having rendered "assistance to Shere Khan, the victorious rival of the Emperor Homayoon, the family "incurred the vengeance of the latter prince, and from this period the clan would appear "to have gradually declined;—but it was not until some generations later that the "ruin of the tribe was consummated. Their last struggle for independence was made "in the time of Akbar, when they engaged the imperial troops under the walls of "Calpee. On this occasion they were completely overthrown, with the loss of their "leader, Hurburun Dèo, and an immense number of followers, and the clan never "again regained its power."

235. Pergunnah Kora is bounded on the North by Pergunnah Bindkee, on the South by the River Jumna, on the East by Pergunnah Tuppehjar, and on the West by Zillah Cawnpore. It contains 192 villages, has an area of 174·4 square miles, and a population of 82,316 souls.

* In Elliot's Supplemental Glossary, at page 370, will be found a probable solution of the origin of this word.

236. The following transfers of villages were made at the time of settlement:—

Thirty Villages transferred to Cawnpore.

To Cawnpore.	Names of Villages.	Jumma.	Area in Acres.	Population.
Pergunnah Sarh, ...	Bareegaon, ...	2,479	1,442	1,008

237. The boundaries were laid down in 1838 by the Uncovenanted Deputy Collector, Raè Manick Chund; the Professional Survey was made by Lieutenant Abbott in the year following; the Khusrah Survey followed; and the assessment was fixed by Mr. D. T. Timins at the close of the same year. The Jumma was raised from Rupees 2,03,101 to Rupees 2,09,114, but at the subsequent revision by Mr. Thornton, in 1843, an annual reduction of Jumma was granted to the extent of Rupees 5,880. This Pergunnah, as I have already shown in another part of the Report, suffered more than any other from the famine of 1838, but it has long since regained its original prosperity under the moderate assessment which is now levied from it.

238. The deduced Revenue rates are—

Class of Soil.	Irrigated. Rs. As. P.	Unirrigated. Rs. As. P.
First,	3 14 2	2 9 6
Second,	3 3 10	1 15 1
Third,	1 4 9	0 10 4

239. The estates situated to the North and those in the centre of the Pergunnah are very fertile, and are remarkable for the excellence of the crops they produce, but as a whole, the Pergunnah cannot be considered as one of great fertility. Large tracts of waste land, intersected by innumerable ravines, are met with in different parts of the Pergunnah, but more especially in the neighbourhood of the Jumna, which presents an unpleasing contrast to the richly cultivated soil that characterizes the central part of the Pergunnah.

240. Two streams flow through this Pergunnah, the "Rind" and the "Noon," but neither is made available for purposes of irrigation.

241. The Pergunnah contains 3,035 wells, of which number 1,081 are pukka, and 1,954 cutcha. The average depth at which water is met with is 78 feet. There are also in the Pergunnah 1,038 tanks, of various dimensions; of these 10 are constructed of masonry, and the remainder are cutcha.

242. The only manufactures of any note are the Copper and Bell-metal utensils manufactured in Kora Khas, and the Bows and Arrows and Charpoy Legs, of Kusbah Kudjwah.

243. The principal Townships and Villages are—

Township.	Village Area.	Jumma.	Population.	Remarks.
	Id Acres.	Rs.		
Kora,	315	951	4,074	The fort at this place is occupied by the tehseeldar of the Pergunnah, and his establishment.
Jehanabad,	396	2,413	7,647	This is a Thannah station. There is an elegant Baruhdaree here, with a garden and pukka tank attached to it, constructed by Meer Almas Ali Khan when he held the office of Amil.
Amowlic,	135	2,265	2,492	There is a large bazar held at this place twice a week.
Kudjwah,	134	147	4,522	Kudjwah is memorable as the scene of the battle between Aurungzebe and Shooja, in A. D. 1659, and in later times (1712) of another battle between the Prince Ferokhshere and Aizodeen, the eldest son of the Emperor Jehander Shah.

244. The Pergunnah contains 183 mosques and other buildings of a religious nature belonging to the Mahomedans, and 234 temples and other buildings of a religious character belonging to the Hindoos.

245. The estates of the Pergunnah are distributed as follows:—

Classes.	Villages.
Gowtum Rajpoots, ...	15
Other Rajpoot Classes, ...	6
Brahmins, ...	57
Kayusths, ...	30
Jugunbunsi Brahmins, ...	21
Moosulmans, ...	23
Other Classes, ...	40
Total, ...	192

246. An account of the Gowtums will be found above, in paragraph 234. The Brahmins have nearly doubled their landed property in this Pergunnah since the accession of the present Government. The Jugunbunsis have greatly declined since the cession. In 1809 I find they held 51 estates in the Pergunnah, at present they hold only 21: they owed their former prosperity to the liberality of the Gowtum Rajas of Argul, from one of whom they received the Chowdrahut of the Pergunnah.

247. The annexed Statement shows the distribution of the different land tenures:

Tenures.	Zemindaree.	Putteedaree.	Imperfect Putteedaree.	Bhyacharee.	Total.
Number of Estates, ...	164	6	22	....	192

248. Sixty-four suits were preferred before the Special Commission from this Pergunnah for the reversal of sales and other transfers of landed property effected under our earlier Revenue administration; in 26 of these the parties obtained decrees, and in 38 the claim was dismissed.

249. The state of Education in this Pergunnah will be seen on referring to the Table given below:

Statement showing the Number of Schools and Scholars in Pergunnah Kora at the close of 1850.

Name of Pergunnah.	Area in Square Geographical Miles.	Population.	Hindee.		Persian.		Sanskrit.		Arabic.		English, Persian, and Oordoo.		Total.	
			Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.
Kora, ...	174·4	82,316	29	373	21	90	3	26	..	..	..	..	53	489

250. The following Statement shows the Revenue and Police establishments of the Pergunnah, and the percentage of charge of each on the Jumma of the Pergunnah:

PERGUNNAH BINDKEE.

251. The old name of this Pergunnah was "Keerutpore Kunanda"; it is said to have derived its name from Raja Keeruth Singh, a descendant of the Argul family. I have not been able to discover when the Pergunnah took its modern name of Bindkee. The village people have a tradition that it was named after a recluse called Bundageeshah, the friend and spiritual adviser of the above-named Raja.

252. The Pergunnah is bounded on the North by the Ganges, on the South by Pergunnahs Kora and Tuppehjar, on the East by Kooteah-Gooneer, and on the West by Zillah Cawnpore. It contains 76 villages, has an area of 62·5 square miles, and a population of 35,161 souls.

253. The only river in the Pergunnah is the "Pandoo," which forms the boundary on the North-west quarter between this District and Zillah Cawnpore. There are no jheels of any extent in the Pergunnah.

254. No transfers of villages took place at the time of settlement, either to or from this Pergunnah.

255. The village boundaries were determined in 1838, by the Uncovenanted Deputy Collector, Rae Manick Chand. The Professional Survey was completed in the year following, and was immediately followed by the Native Survey, and the assessment was fixed by Mr. D. T. Timins in the early part of 1840. The Jumma of the Pergunnah was let down from Rs. 95,848 to Rs. 95,184, and a further reduction of Rs. 647 was subsequently granted by Mr. Thornton in 1843.

256. The deduced Revenue rates, as fixed by the Settlement Officer, were,—

Class of Soil.	*Irrigated.* Rs.	As.	P.	*Unirrigated.* Rs.	As.	P.
First, ...	4	9	1	2	7	5
Second,..	3	14	8	1	15	4
Third, ...	1	4	6	0	10	4

257. As a whole, Bindkee may be considered to be a very fertile Pergunnah: its staples are Rice, Wheat, and Birra. Besides these products, it yields annually a large quantity of Tobacco and Garden produce. The soil is rich, and irrigation abundant. The only part of the Pergunnah where the soil is of an inferior description is in the neighbourhood of the Ganges, but here again most of the villages have the advantage of some rich Turree and Cachar.

258. The Pergunnah contains 396 pukka and 1,369 cutcha wells, and water is reached at an average depth of 61 feet; there are likewise 364 cutcha and 6 pukka tanks in the Pergunnah.

259. There is a brisk trade carried on in the different kinds of Grain, in the coarser descriptions of Cloth, in Cattle, Cotton, and Goor. The coloured Cloths and Chintzes, manufactured in Bindkee Khas, and Mouzah Koorsam, command a large and ready sale in the different bazars of the District.

260. The principal Townships are,—

Townships.	Area of Village.	Jumma.	Population.	Remarks.
Bindkee, ...	138	2,765	3,110	There is a large bazar held here twice a week. The Cattle sales are the best attended in the District.
Khudra,..	14	757	703	There is a bazar held here twice a week.
Seorajpore,..	48	1,065	1,948	There are several fine buildings and ghauts at this place belonging to the Gungapootrees. An annual fair is held here in November, which is usually attended by a large concourse of people from different parts of the District and from the surrounding country. The number of persons who attended the fair of last year (1850) was estimated at 70,000. There is a saltpetre factory here which yields about 1,000 maunds yearly.

261. The Pergunnah contains 8 Mahomedan places of worship and 92 temples and other religious buildings belonging to the Hindoos. There are 2 Government and 11 Native Serais upon the Grand Trunk Road, within the jurisdiction of this Pergunnah. There are also 4 fine pukka tanks on the line of road leading to Etawah and Agra.

262. The estates in this Pergunnah are held by the under-mentioned classes:—

Class.	*No. of Estates.*
Gowtums,..	21
Brahmins, ...	16
Kayusths,..	9
Khutrees, ...	4
Syuds, ...	2
Sheikhs, ...	4
Other classes,..	20
Total, ...	76

263. An account of the Gowtums has already been given in the remarks on Pergunnah Kora. The Brahmin proprietors would appear to have acquired the greater portion of their estates since the accession of the present Government: at the cession, this class held only 6 villages. The same remark applies to the Khutrees. The Mussulman proprietors, on the other hand, appear to have very greatly declined since the period of our rule. At the cession, I find the Syuds were possessed of 15 estates, at the present date they hold only 2; and the Sheikhs who, at the accession of the English Government, held 10 villages, have now only 4.

264. The land tenures are shown in the Statement below:—

Tenures.	Zemindaree.	Putteedaree.	Imperfect Putteedaree.	Bhyacharee.	Total.
Number of Estates, ...	58		14	....	76

265. The state of Education in the Pergunnah will be seen from the Statement annexed:—

Statement showing the Number of Schools and Scholars in Pergunnah Bindkee at the close of 1850.

Name of Pergunnah.	Area in Square Geographical Miles.	Population.	Hindee.		Persian.		Sanskrit.		Arabic.		English, Persian and Oordoo.		Total.	
			Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.
Bindkee, ...	62·5	35,161	18	375	4	26	2	34	..	..	..	..	24	435

266. Thirty suits were preferred before the Special Commission from this Pergunnah. Decrees were obtained in seventeen cases, and in the remainder the claim was dismissed.

267. The Statement below furnishes a detail of the Revenue and Police establishments maintained in the 3 Pergunnahs* forming this Tehseeldaree, as also the percentage of charge of each establishment on the Jumma of the Tehseeldaree Division:—

Tehseeldaree Establishment.

Number of Officers.	Designation of Office.	Monthly Salary in Rupees.	Total per Annum in Rupees.	Jumma.	Percentage on Jumma.
1	Tehseeldar, ...	200	2,400

* Pergunnahs Bindkee, Tuppehjar, and Kooteah-Gooneer.

PERGUNNAH TUPPEHJAR.

268. This Pergunnah was formerly included in Pergunnah Kora, from which it was only separated so recently as the Fuslee year 1180. It was originally a chourassi of Gowtum Rajpoots, now Mussalman, a class which still constitutes the largest portion of the Pergunnah.

269. "Jar Gurhee," from which the Pergunnah takes its name, is said to have been founded by one "Burriyar," a Gowtum, and a descendant of the Argul family, who turned Mussalman in the time of Akbar, and received an extensive jagheer from that prince, which included the lands of Jar and several of the surrounding villages. He built a strong fort at "Jar," as also a rouzah remarkable for its architectural beauty. In this latter building are deposited the tomb of Burriyar and those of his descendants. The family are still large land-holders in the Pergunnah.

270. Tuppehjar is bounded on the North by Pergunnahs Bindkee and Kooteah-Gooneer, on the South by the Jumna and Pergunnah Matour, on the West by Pergunnah Kora, and on the East by Pergunnahs Ayah Sar and Futtehpore. It contains 88 villages, has an area of 78·5 square miles, and contains a population of 31,096 souls.

271. The River "Rind" flows through the Pergunnah in a South-easterly direction, but it is not used for irrigation, neither are there any jheels or tanks in the Pergunnah available for the purpose. Well irrigation, however, is extensively employed, and the land generally is in a high state of cultivation. The whole of the estates lying on the bank of the Jumna possess a fair proportion of turree, which produces Rubbee crops of a very superior kind.

272. The following transfer was made at the time of Settlement:

One Village transferred from Pergunnah Kora.

Pergunnah from whence transferred.	Name of Village.	Jumma.	Area in Acres.	Population.
Kora, ...	Bara,...	2,201	931	1,100

273. The village boundaries were determined by the Deputy Collector, Manick Chand, in 1838. The Professional Survey, under Lieutenant Stephen, entered the Pergunnah in the year following, the Native Survey followed, and in 1840, Mr. Timins fixed the assessment at 1,15,219 rupees, being an increase of 6,200 Rupees on the former Jumma. At the subsequent revision, in 1843, the demand was lowered to 1,12,891 rupees.

274. The deduced Revenue rates were—

Class of Soil.	Irrigated. Rs. As. P.	Unirrigated. Rs. As. P.
First, ...	4 11 10	2 9 10
Second, ...	4 1 4	1 15 3
Third, ...	1 5 0	0 12 10

275. The Pergunnah contains 1,507 wells, of which 249 are pukka and 1,258 cutcha, and water is found at an average depth of 92 feet from the surface.

276. Goor, Cotton and Grain are the principal Exports. The only manufactures of the Pergunnah are Guzzi and Garha Cloths, and the common Chintzes of the Country. Markets are held in the undermentioned villages:

Jafirgunj. | Shah Bazpore. | Tupnee.

The business that is done is inconsiderable, except in the last named village.

277. The principal Townships are:—

Village or Township.	Area in Acres.	Jumma.	Population.	Remarks.
Jafirgunj Oorf Bindour,	64	1,640	643	There is a Bazar held here twice a week.
Jar, ...	55	1,341	1,407	A Naib Darogah of Police resides here.
Shah Bazpore, ...	21	2,977	1,129	There is a large Bazar held here on Mondays and Fridays.

278. The Pergunnah contains 35 religious buildings belonging to the Mahomedans, and 27 buildings of a similar character belonging to the Hindoos; the larger proportion of Mahomedan religious buildings is accounted for by the circumstance of most of the Gowtums of this neighbourhood having, in the decline of their power, turned Mussalmans.

279. The landed property is distributed as below:—

Class.	Estates.
Gowtums, ...	39
Chundels, ...	1
Seyngars, ...	4
Dikhit, ...	1
Kayusths, ...	13
Bunneahs, ...	10
Syuds, ...	5
Mewattics, ...	2
Other classes, ...	13
Total, ...	88

280. The Gowtums of this Pergunnah, as I have already observed, are almost all of the Mussalman persuasion. The Seyngars came, it is said, from Bundelcund; the

present head of the tribe is the Raja of Jugumunpore, in Jalown. The Chundels came originally from Malwa; they subsequently emigrated to Calinger in Bundelcund, where they are reported to have remained during eight generations, when they moved to Mahoba; from thence they emigrated to Canouj, and at a later period they moved Eastward in the direction of Suchaindee and Seorajpore. The Chundels of this District acknowledge the Raja of Seorajpore as the head of the clan. The Dikhits, like the Chundels, came also from Bundelcund. The Kayusths and Bunneah classes have obtained their villages within the past few years. The Syuds have greatly declined; at the cession they held 15 mouzahs, at present they have a third only of that number. The Mewatties too were large landholders under the former Government; at the cession they are recorded as holding 30 Estates.

281. The land tenures of the Pergunnah are shown in the annexed Statement:

Tenures.	Zemindaree.	Putteedaree.	Imperfect Putteedaree.	Bhyacharee.	Total.
Number of Estates,.....	65	11	11	1	88

282. Ten suits were preferred from this Pergunnah before the Special Commission, in 2 cases the parties obtained decrees, in the remainder the claim was dismissed.

283. The Statement below exhibits the state of Education in the Pergunnah at the close of 1850.

Statement showing the number of Schools and Scholars in Pergunnah Tuppehjar at the close of 1850.

Name of Pergunnah.	Area in Square Geographical Miles.	Population.	Hindee		Persian		Sanskrit		Arabic		English, Persian and Oordoo		Total.	
			Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.
Tuppehjar.	78·5	31,096	6	83	6	21	1	10	..	...	...	...	13	114

284. As this Pergunnah forms part of the Tehseeldaree of Bindkee, and as no separate Establishment is maintained for it, the percentage of charge of Establishment on the Jumma of the Pergunnah, cannot be separately shown. The charges of the Police and Revenue Establishments, upon the Jumma of the whole Division, have already been given in the concluding paragraph of the remarks upon Pergunnah Bindkee.

PERGUNNAH KOOTEAH-GOONEER.

285. Kooteah and Gooneer were distinct Pergunnahs up to the time of the last Settlement, the villages of the two Pergunnahs were so intermingled one with the other, that the Settlement Officer found a difficulty in defining a boundary between them; it was deemed advisable, therefore, to incorporate the two Pergunnahs in one, and in their united state they form but a very moderately sized Pergunnah.

286. The Pergunnah is bounded on the North by the Ganges, on the South by Pergunnah Tuppehjar, on the West by Pergunnah Bindkee, and on the East by Pergunnah Futtehpore. It contains 69 villages, has an area of 65·4 square miles, and contains 31,962 inhabitants.

287. The village boundaries were determined by the Deputy Collector Manick Chand in 1838, the Professional Survey under Lieutenant Stephen was made in 1839, the Native Survey was completed in the same year, and in 1840 the assessment was fixed by Mr. D. Timins. The Jumma was raised from Rs. 78,714 to Rs. 81,465, but it was subsequently lowered in 1843 to Rs. 80,922.

288. The following transfers of villages were made at the Settlement:

Seven Villages received by transfer from Pergunnah Futtehpore.

Pergunnah from whence transferred.	Name of Village.	Jumma.	Area in Acres.	Population.
Futtehpore, ...	Amorah, ...	1,085	1,238	1,536
,, ...	Umurgynah,...	2,335	1,301	757
,, ...	Parbihtah, ...	200	153	Deserted.
,, ...	Dugdeyah, ...	235	132	155
,, ...	Sikroree, ...	800	534	381
,, ...	Daoodpore, ...	710	254	379
,, ...	Bhiyamow, ...	820	486	390
Total, ...	... ...	6,185	4,198	3,598

289. The deduced Revenue rates, as fixed by the Settlement Officer, were—

Class of Soil.	Irrigated. Rs. As. P.	Unirrigated. Rs. As. P.
First, ...	3 10 9	1 14 4
Second, ...	3 2 6	1 9 3
Third, ...	1 4 2	0 9 8

290. This Pergunnah is a very productive one, the soil is generally good, and irrigation is abundant. The Cachar lands, near the Ganges, are of the richest kind, and

produce some of the finest crops in the District. The staples are—Rice, Wheat, Barley, Gram, and Birra; besides which there is a fair proportion of Sugar-cane, Tobacco, and garden produce.

291. There are 1,443 wells in the Pergunnah, of which 722 are pukka, and 721 cutcha. Water is found at an average depth of 63 feet from the surface.

292. If I except the common Guzzi-cloth manufactured in Mouzah Rewaree, there are no manufactures of any kind in the Pergunnah.

The principal Villages of the Pergunnah are,—

Village.	Area in Acres.	Jumma.	Population.	Remarks.
Rewaree, ...	17	1,814	261	There is a large bazar held here twice a week.
Malwa, ...	41	2,901	1,339	This village is situated on the Grand Trunk Road; there is a Military Encamping Ground here.
Gooneer Khas,... ...	129	6,725	2,583	There is a bi-weekly bazar here.
Mohar, ...	58	6,012	3,303	This village is situated on the Grand Trunk Road.

293. The Estates of this Pergunnah are thus distributed:

Classes.	*Estates.*
Gowtums, ...	19
Bais, ...	2
Chundels, ...	5
Dikhits, ...	13
Junwars, ...	2
Brahmins, ...	7
Kayusths, ...	8
Other classes, ...	13
Total,.....	69

294. The first four have already been noticed in my Remarks on the other Pergunnahs. The Junwars of Kooteah-Gooneer are reported to have come from "Ekonah, Bulrampore," in the Ilakeh of "Baraich," to the Northward of Beiswara. The remaining classes do not seem to call for any particular notice.

295. The Land Tenures are shown in the annexed Statement:

Tenures.	Zemindaree.	Putteedaree.	Imperfect Putteedaree.	Bhyacharee.	Total.
Number of Estates,...	59	2	8	0	69

296. Out of 23 suits preferred before the Special Commission from this Pergunnah, decrees were given in 17 cases, and in the remainder the claim was dismissed.

297. The state of Education in the Pergunnah, at the close of last year, will be seen on reference to the Statement below:

Name of Pergunnah.	Area in Square Geographical Miles.	Population.	Hindee.		Persian.		Sanskrit.		Arabic.		English, Persian and Oordee.		Total.	
			Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.
Kootcah-Gooneer, ...	65·4	31,962	12	94	7	25	3	7	0	0	0	0	22	126

298. This Pergunnah belongs to the Tehseeldaree of Bindkee, and there is no separate Revenue or Police Establishment maintained for it. The charges of the Revenue and Police Establishments, on the Jumma of the Tehseeldaree Division, have already been shown in the concluding paragraph of the Remarks upon Pergunnah Bindkee.

PERGUNNAH FUTTEHPORE.

299. Tradition supplies the following particulars respecting the foundation of the Town of Futtehpore. It is said that in the time of Raja Seetanund, who lived about 500 years ago, there existed upon the site of the present town 8 forts, that the Raja occupied one of those forts himself, and that in the remaining 7 dwelt his brethren, that owing to some misunderstanding between the Raja and the inhabitants of a neighbouring village, the latter appealed to Sooltan-ool-Sharuk Ibrahim Shah, King of Jaunpore, and invited that prince to invade the country. Ibrahim Shah accordingly mustered an army, and having attacked and conquered Raja Seetanund, he directed that the spot where the battle had been fought should be called "Futtehpore." According to the "Tuskeer-ool-Sadad," it was not Ibrahim Shah who defeated Seetanund upon this occasion, but Jelal-o-deen, Sooltan of Bengal,—but of the two accounts the traditionary one is most generally believed.

300. Aboo Nugger, which forms a very considerable portion of the present Town, was founded, it is said, by Nuwab Abdool Samund Khan, Foujdar of Sadeepore Pylanee, in Bundelcund: this officer having received a grant of 500 beegahs of land in the neighbourhood of Futtehpore, under a sunud of Shah Alumgeer, proceeded to construct upon the lands so granted, a mosque, a serai, a pukka tank and other works of public utility; the land upon which these several buildings were constructed he called "Aboo Nugger." The numerous ruins which meet the eye on every side in this neighbourhood testify to the extent of the place in earlier times.

301. The Kutra "Abdool Ghanee," now included in the present Town was formerly a distinct kusbah; its founder was one Abdool Ghanee, who held the office of Foujdar in the time of the Emperor Alumgeer; this officer having resumed all the jageers within his jurisdiction, transmitted the Revenue thereof to the Emperor, the Emperor directed that the money should be returned to the Mafeedars, the Mafeedars refused to accept it, whereupon Abdool Ghanee ordered that it should be laid out in the construction of two serais (Kutra Abdool Ghanee and Rustogee Gunj) and in the erection of a mosque. There is a Persian inscription on this latter building to the following effect: "In the reign of Shah Alumgeer Ghazee, who was so merciful that "Heaven even might imitate his acts, and under whose sway people lived together in "brotherly love, this good mosque was built, by the renowned Abdool Ghanee, of Fut-"tehpore." The numerical value of the words which form the concluding line of the inscription is 1075; this number indicates the Hijree year in which the building was erected, and corresponds with 1664 of our era.

302. Pergunnah Futtehpore is bounded on the North by the Ganges, on the South by Pergunnah Ghazeepore, on the East by Pergunnahs Huswa and Hutgaon,

108397

and on the West by Pergunnah Bindkee. It contains 261 villages, comprises an area of 156·9 square miles, and contains a population of 89,760 souls.

303. The only stream in the Pergunnah is the Sursoo Khaderey, which takes its rise in a jheel about 3 miles to the North of Futtehpore. Embankments are thrown up in several places during the rainy season, in order to secure the water of the stream for the land in its vicinity. There are several jheels in the Pergunnah, but they are not of any extent, and are generally quite dry by the end of November. The number of wells in the Pergunnah not including those in the Town is 3,210; of these 1,451 are pukka, and 1,759 cutcha. The average depth at which water is found is 42 feet.

304. The duty of determining the village boundaries was performed by the Deputy Collector Manick Chand; the Professional Survey, under Lieutenant Stephen, was completed in 1839, the Native Survey followed; and the assessment was distributed by Mr. D. Timins in the year following. The Jumma was raised from Rs. 1,70,481 to Rs. 1,84,187, but it was subsequently lowered by Mr. Thornton to Rs. 1,82,515.

305. The following transfers of villages took place at the time of Settlement:—

Seven Villages transferred to Pergunnah Ayah Sar.

Pergunnah from whence transferred.	Villages.	Jumma.	Area in Acres.	Population.
From Futtehpore, ...	Bahoonah, ...	5,143	3,036	1,804
,, ,, ...	Kunchocha, ...	489	323	272
,, ,, ...	Doondra, ...	1,324	1,069	600
,, ,, ...	Peharpore, ...	733	558	264

306. The deduced Revenue rates are—

Class of Soil.	*Irrigated.*	*Unirrigated.*
	Rs. As. P.	Rs. As. P.
First, ...	3 13 11	2 6 8
Second, ...	3 2 8	1 12 5
Third, ...	1 3 4	0 10 4

307. There is a good deal of Oosur intermixed with the soil in the neighbourhood of the Grand Trunk Road; but taken as a whole, the Futtehpore Pergunnah is one of

exceeding fertility. Rice, Sugar-cane, and all the more valuable Rubbee crops are more extensively cultivated here than in any other part of the District. Irrigation is very abundant, and every facility exists for the sale and export of the surplus produce of the Pergunnah.

308. The Manufactures are insignificant. The only trade in which the inhabitants are said to excel is in the manufacture of shoes and whips. The Futtehpore hides, of which a large number are annually exported, are held in great estimation.

309. The Town of Futtehpore occupies an area of 160 acres, and contains a population of 15,525 souls. Until within the past few months there was not a single street through which it would have been safe or even practicable to drive a carriage; at the present time, two noble streets traverse the entire length and breadth of the Town, each having a carriage breadth of 26 feet, with drains of pukka masonry on either side. These improvements have not only tended to increase the salubrity of the Town, but they have been the means also of inducing the wealthier inhabitants to undertake its improvement in other ways. The filthy hovels with which even the principal streets abounded heretofore, have in many places given place to brick buildings of a neat and uniform appearance, and for the first time since its foundation, Futtehpore has begun to wear the look of a Town: it contains 4,181 houses, of which 801 are pukka and 3,380 kutcha. The number of wells within the Town is 306, of which 216 are constructed of masonry: it contains likewise 7 serais, 2 of which are of burnt brick, and 5 of mud.

310. The annexed abstract Statement shows the different Trades and Occupations pursued within the Town of Futtehpore:—

Details of Trades and Professions in the Town of Futtehpore.

Arrow Makers, ...	32	Dyers and Vendors of Goat Skin, ...	14	Mussalman Weavers, ...	308
Bangles, (Manufacturers of,)	42	Ear-borers, ...	1	Native Carriage Makers, ...	5
Barbers, ...	390	Embroiderers, ...	4	Oil, (Vendors of,)	292
Bearers, ...	45	Farriers, ...	14	Potters, ...	104
Beef Butchers, ...	98	Firework Makers, ...	13	Prostitutes, ...	147
Beldars, ...	12	Flour Vendors, ...	270	Rungbarras, ...	8
Betel-leaf Sellers, ...	119	Gardeners, ...	78	Saddlers, ...	13
Bhistees, ...	20	Ghurramees, ...	27	Sellers of String, ...	6
Blacksmiths, ...	49	Goldsmiths, ...	79	Shoe Makers, ...	130
Bricklayers, ...	65	Grain Vendors, ...	587	Shepherds, ...	90
Braziers, ...	18	Haberdashers, ...	31	Spice Sellers, ...	81
Burnishers, ...	21	Hide Dressers, ...	15	Soap Manufacturers, ...	14
Buffoons, ...	8	Hindoo Weavers, ...	145	Sweetmeat Vendors, ...	61
Calenderers, ...	19	Hooka Makers, ...	12	Sweepers, ...	66

Carvers, (Wood,)	3	Lime Burners, ...	2	Turban Makers, ...	2
Cloth Merchants, ...	47	Liquor Manufacturers, ...	62	Washermen, ...	200
Cotton Cleaners, ...	84	Metal Vessel Makers, ...	15	Weighmen, ...	28
Cowherds, ...	23	Midwives, ...	3	Whip Makers, ...	19
Druggists, ...	3	Milk, (Sellers of,)	485	Wood Vendors, ...	46
Dullal Kharee, ...	3	Money Changers, ...	103	Workers in Silk, ...	9
Dyers, ...	25	Mutton Butchers, ...	24		

311. The Police force stationed within the Town is of the following strength :—

No. of Officers.	Office.	Monthly Salary.	Total per Annum.	Remarks.
		Rupees.	Rupees.	
1	Cotewal, ...	50	600	
1	Naib ditto, ...	15	180	
1	Mohurir, ...	8	96	
1	Naib ditto, ...	5	60	
1	Duffadar of Sowars, ...	21	252	
2	Sowars,...	36	432	
1	Jemadar, ...	6	72	
13	Burkundauzes, ...	52	624	
21	Total, ...	193	2,316	

312. The Chowkeedaree force consists of 46 men, who receive a salary each of 3 Rs. a month; the expense is defrayed by means of a cess upon the inhabitants, which is revised annually by a Punchayut formed under the provisions of Regulation XXII. of 1816; the surplus collections of the year are appropriated to cleansing and improving the Town. The average number of houses under the charge of each chowkeedar is 91.

313. The number of Mosques and other places of Mahomedan worship within the Town is 46, and the number of Temples and other places of Hindoo worship is 19; besides the above, there are in the different villages of the Pergunnah 19 musjids, 5 imambarohs, 16 temples, and 57 sewalahs.

314. The principal Villages of the Pergunnah are,—

Village or Township.	Area in Acres.	Jumma.	Population.	Remarks.
		Rupees.		
Hoosaingunj, ...	81	2,037	3,265	This village is only remarkable as being the chief emporium of the agricultural produce of the District; considerable quantities of Grain of every kind are annually stored here for export within the District itself and beyond it. A large bazar is held here twice a week.
Usnee, ...	38	903	696	Several wealthy merchants reside here and carry on a large banking business; they also occasionally import Cashmere shawls for sale.
Jumrawan, ...	108	12,403	3,509	This is a large and fertile talooka belonging to a family of Rajbuns Rajpoots.

315. The Estates of the Pergunnah are held by the following classes :—

Class.	*Estates.*
Bais, ...	37
Rajbunsee, ...	22
Brahmins, ...	18
Kayusths,...	39
Mussalmans,...	106
Other classes, ...	39
Total, ...	261

316. The tribe denominated "Bais" came originally from Moongi Putun, in Malwa; they subsequently emigrated to Beiswara in Oude, from whence in later times they came and settled in this neighbourhood. Huttoo Sing, of mouzah Kandey, is the head of the tribe in this Pergunnah. The "Rajbunsis" came from the other side of the Jumna, about 400 years ago; the period of their earlier emigrations I have been unable to ascertain. The heads of the tribe in this neighbourhood are Seodyal and Kampta Singh, of Talooka Jumrawan. The Brahmins have acquired the larger portion of their Estates since the cession. Both the Kayusths and the Mussalmans would seem to have declined since the accession of our rule. The principal landholders amongst the Kayusths are Hursahai and Ramsahai, and the largest Mussalman landholder is Chowdry Ahmed Yar.

317. The state of Education in this Pergunnah at the close of 1850 will be seen on reference to the Statement below :—

Name of Pergunnah.	Area in Square Geographical Miles.	Population.	Hindee		Persian		Sanskrit		Arabic		English, Persian and Oordoo		Total.	
			Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.
Futtehpore, ...	156·9	89,760	17	241	39	140	5	39	0	0	0	0	61	410

318. The distribution of the Land Tenures is shown in the Statement below :—

Tenures.	Zemindaree.	Putteedaree.	Imperfect Putteedaree.	Bhyacharee.	Total.
Estates, ...	193	21	45	2	261

319. Ninety-five Suits were entered before the Special Commission for the reversal of fraudulent sales and other transfers of property; decrees were given in 51 cases, and in 44 the claim was dismissed.

320. The following Statement shows the Revenue and Police Establishments maintained within the Futtehpore Tehseeldaree, and the percentage of charge of each on the Jumma of the Revenue Division. This Division comprises Pergunnahs Futtehpore and Huswa. There is no separate Revenue Establishment for the latter

Pergunnah, the percentage of charge has therefore been calculated on the Jumma of the Revenue Division.

Tehseeldaree Establishment.

PERGUNNAH HUSWA.

321. The Town of Huswa, from which the Pergunnah takes its name, is the most ancient kusbah in the District. The name of its founder is not known, but we gather from the "Jyman Pooran," that in the Dwarpayūg it was called "Chumpukka Pooree," and that it retained that name till the time of Raja Humzut Dhooj, who is said to have flourished about the commencement of the Caliyūg and to have been a contemporary of the renowned Joodestheer. It was subsequently named "Huswa," or "Hunswa," after the abovenamed Raja. Pergunnah Huswa is noted in the Aeen Akhbaree as being one of the 12 muhals of Cirkar Kurrah. It contains 167 villages, covers an area of 105·5 square miles, and contains 48,932 inhabitants.

322. The Pergunnah is bounded on the North by Futtehpore, on the South by Ghazeepore, on the East by Hutgaon, and on the West by Ayah Sar and Futtehpore.

323. The only stream in the Pergunnah is the Sursookhudèree, which takes its rise in the adjoining Pergunnah of Futtehpore and flows in a South-Easterly direction through Pergunnah Huswa, and afterwards pursuing an Easterly course, passes through Pergunnah Ekdillah and disembogues in the Jumna, in the neighbouring District of Allahabad. There are several jheels and tanks in the Pergunnah, which supply abundant irrigation to the Rice cultivation, and which are made available also during the earlier part of the Rubbee season.

324. The village boundaries were marked off by the Deputy Collector in 1838. The Professional and Native Surveys were both completed in the year following, and in 1840 the assessment was fixed at Rs. 1,17,971; a reduction to the extent of Rs. 1,448 was subsequently granted in 1843.

325. The following transfers of villages took place at the time of Settlement:—

Four Villages transferred to Pergunnah Futtehpore.

Pergunnah from whence transferred.	Names of Villages.	Jumma.	Area in Acres.	Population.
Huswa, ...	Ourera, ...	1,347	1,273	680
,, ...	Phersee, ...	1,401	1,209	736

Total, ...	... ...	3,196	2,955	1,758
	One Village transferred to Pergunnah Hutgaon.			
Huswa, ...	Ghijdehmow, ...	435	298	322
Total, ...	....	3,631	3,293	2,080

Five Villages received by Transfer.

Pergunnah from whence transferred.	Names of Villages.	Jumma.	Area in Acres.	Population.
Futtehpore, ...	Burrikhoord, ...	1,059	641	397
,, ...	Burriboozoorg, ...	518	533	182
,, ...	Korturpore, ...	102	79	42
,, ...	Pilkince, ...	1,334	1,320	739
Total, ...	.....	3,013	2,573	1,360
Hutgaon, ...	Utroura, ...	407	447	108
Total, ...	... ...	3,420	3,020	1,468

326. The deduced Revenue rates of the Pergunnah are,—

Class of Soil.	*Irrigated.* Rs. A. P.	*Unirrigated.* Rs. A. P.
First, ...	3 13 6	2 6 5
Second, ...	3 3 2	1 12 2
Third, ...	1 4 4	0 10 3

327. The Pergunnah contains 1,558 wells, of which 1,035 are pukka and 523 cutcha. The average depth at which water is found is 58 feet.

328. There are no Manufactures of any kind in this Pergunnah.

329. The principal Villages of the Pergunnah are,—

Village or Township.	Village Area.	Jumma.	Population.	Remarks.
Huswa, ...	133	2,893	3,627	This kusbah contains 755 houses and shops and 24 wells.
Belinda, ...	50	598	939	This village is situated on the Trunk Road. The Thannah has recently been moved from Huswa to this place.
Satoun, ...	79	9,754	3,242	
Nareynee, ...	40	2,763	1,790	There is a large bazaar here twice during the week.
Rampore Thiriaon, ...	91	17,978	2,353	This is a large Talooka belonging to a family of Bisain Rajpoots, the present representative of the family is Thakoor Udote Singh.

330. The number of religious buildings is as follows:—

Musjids and other Mahomedan places of worship, ... 30
Temples and other Hindoo places of worship, ... 41

331. The following is the present distribution of the landed property of the Pergunnah:—

Class.	*Estates.*
Beis, ...	11
Bisain, ...	16
Kayusths, ...	23
Brahmins, ...	11
Mussalmans, ...	93
Other castes, ...	13
Total, ...	167

332. The "Bois" have already been mentioned in the remarks upon Pergunnah Futtehpore. For an account of the Bisain *vide* Elliot's Supplemental Glossary. The Kayusths, of whom Hursahai and Ramsahai are the heads, have nearly doubled their landed property since the commencement of our rule. The Mussalmans have also been great gainers since the Cession.

333. The Land Tenures are noted in the annexed Statement:—

Tenures.	Zemindaree.	Puttedaree.	Imperfect Puttedaree.	Bhyacharee.	Total.
Estates, ...	130	17	20	0	167

334. The state of Education in the Pergunnah at the close of last year will be seen on reference to the abstract Statement given below:—

Name of Pergunnah.	Area in Square Geographical Miles.	Population.	Hindee.		Persian.		Sanskrit.		Arabic.		English, Persian and Oordoo.		Total.	
			Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.
Huswa, ...	105·5	48,932	10	87	14	134	3	9	0	0	0	0	27	230

335. Sixty-nine suits were instituted from this Pergunnah before the Special Commission for the reversal of sales and other transfers of property fraudulently effected during the earlier years of our administration; 35 of these were decreed and 34 were dismissed.

336. As this Pergunnah is included in the Tehseeldaree of Futtehpore, and as there is no separate Establishment maintained for it, the percentage of charge has been calculated on the Jumma of the Revenue Division, *vide* concluding paragraph of the Remarks on Pergunnah Futtehpore.

PERGUNNAH GHAZEEPORE.

337. The ancient name of this Pergunnah was "Ainjhie," and it consisted originally of 84 villages. It appears in the Acen Akhbaree under this name, and it was not until the 3rd Settlement, in 1216 Fuslee, that it lost its original appellation and took the name of Ghazeepore.

338. It is related that Raja Huree Chund, a descendant of the Argul family in Pergunnah Kora, who administered the affairs of that Pergunnah some centuries since, was one day hunting near the Jumna, when he came to a hamlet of mouzah Ainjhie called "Kooteah"; the spot took the Raja's fancy so much that he built a fort upon it, and there established himself.*

339. Two brothers of the Keechar caste, by name Palkundèo and Hurchundèo, who were bound on a pilgrimage to Gya, happened to anchor one evening under the walls of the fort. The Raja received the two brothers with all the rude hospitality of the time, and at parting promised to give to each of them one of his daughters in marriage. The travellers resumed their journey, and after completing their pilgrimage returned to Kooteah, and claimed from the Raja the fulfilment of his promise. The two marriages were shortly afterwards celebrated with all the pomp and show the occasion demanded, Palkundèo being formally adopted by the Raja as his heir and invested with the title of Raja, whilst his brother Hurchundèo was honored with the title of "Rao."

340. It is said that Palkundèo was so passionately attached to his wife that he could neither eat nor sleep except in her presence. It happened one day whilst he was hunting on the South side of the Jumna, that he was suddenly overtaken by darkness, and was compelled to pass the night at a distance from home, but owing to the absence of the Ranee he refused to partake of any food. Seeing the state of distress from which his master was suffering, the Raja's cook, a man of the Missur Brahmin caste, informed him that he was possessed of a certain power that enabled him to produce the likeness of any living person, even though he (the Brahmin) had never seen the person in his life, and if the Raja would command him he would produce a portrait of the Ranee so true to the original that he felt assured the Raja when he saw it would eat his dinner with even more than his usual appetite. The Raja gave his consent, and the Brahmin immediately sketched a full-length portrait

* An interesting account of the Chourassies of this part of India is given in Elliot's valuable Glossary, at page 151.

of the Rance, in which he did not omit even the mark of a mole that she had upon her left thigh. The sight of the mole, whose existence he believed to be known to no one but himself and his wife, raised in the mind of the Raja certain doubts touching the conjugal fidelity of the Rance, he suddenly became inflamed with feelings of jealousy, and killed the Brahmin on the spot. The dying Brahmin cursed his destroyer saying, "Since thou hast killed a Brahmin without cause, instead of rewarding him, not one of thy generation shall remain in the world nor shall any one be left to light a lamp in Kooteah." Shortly afterwards the fort was abandoned by the Raja, and he removed to Ainjhie, where he died. The fort of Kooteah soon after became a ruin, and as the Brahmin had said, no one remained to perpetuate the race and raj of Palkundeo.

341. The name of the Raja is held in great reverence even to this day, and during the Dussehra the inhabitants of Ainjhie assemble together to do honor to his memory, and the zemindars of the village contribute annually the sum of five rupees for certain religious ceremonies that are observed on the occasion.

342. Kusbah Ghazeepore, from which the Pergunnah takes its present name, was founded, about the year 1691, by Araroo Singh the ancestor of Dooniaput Singh, the present Raja of Asothur in the same Pergunnah. The history of this old family is not devoid of interest.

343. The founder of the family was one Deoguj Singh, who came from Keechee Dara in the Sumbut year 1600, or A. D. 1543, and married the daughter of the Raja of Ainjhie, to whose possessions he subsequently succeeded. Little is known respecting the family from this period till the time of Araroo Singh, who lived about 150 years later. At this period the zemindaree of Asothur consisted of 8 thokes, one of which belonged to Araroo, but owing to the oppressive conduct of the other sharers he had been deprived of his share and was reduced to the condition of a common cultivator. One day whilst engaged in the cultivation of his land he became overpowered by fatigue, and fell asleep under the shade of a mohwa tree. An aheer named Bidhata, who was working in a neighbouring field, observed a large snake of the Cobra species approach the sleeping man, and with expanded hood endeavour to screen the head of the sleeper from the rays of the burning sun. The aheer drew near the spot, when the snake rapidly retreated. On awaking, Araroo resumed his plough; whilst thus employed the plough-share struck forcibly against some hard substance which had the effect of arresting its further progress. The labourer stooped to examine what it was, and found a "mutkah" full of gold.* Araroo now became a wealthy and a powerful man; he not only acquired possession of the entire zemindaree of Asothur, but of many other estates besides, and finally gained possession of the whole of Pergunnahs Ainjhie, Matour, and Ayah Sar, and 16 of the adjoining Pergunnahs.

344. He was succeeded by his son Bhugwunt Rae, who had the character of being the bravest and most sagacious of his sons. By him was built the fort at

---

* It is commonly believed by the Hindoos that a Cobra is always charged with the care of buried treasure.

Ghazeepore, where, surrounded by his faithful followers and trusting to the almost impregnable nature of the defences he had constructed there, he bid defiance to the Imperial troops, and in spite of all the efforts of the Government successfully maintained his independence for several years. At length treachery brought about what the Emperor's best generals and a well appointed army had failed to effect. Doorjun Singh, a Chowdry of Pergunnah Kora, offered, in consideration of a certain sum of money, to deliver the head of Bhugwunt Rae into the hands of Nuwab Saadut Khan, whom Mahomed Shah had lately charged with the task of chastising the rebel chief.

345. It was the custom of Bhugwunt Rae to dress his followers in yellow on the occasion of their going into action. A battle had just been fought in which the troops of Bhugwunt, under the command of his nephew Bowaney Singh, had gained the day. The Chowdry availing himself of the occasion, assembled together a body of men, and dressing them in the distinctive costume assumed by the followers of Bhugwunt Rae, proceeded directly towards the camp of the rebel chief, who, deceived by the dresses of the men, imagined them to be his own troops returning from the field of battle. The Chowdry, it is said, on arriving close to the camp, suddenly rushed forward with several of his attendants and despatched his unsuspecting victim ere any effectual resistance could be offered. If, however, we are to believe the popular account of this affair, the deed did not pass unavenged, for it is related that no less than seventy of the Chowdry's nearest relatives fell upon the occasion in question.*

346. Bhugwunt Rae was succeeded by his son Roop Rae, whose administration, of 35 years, seems to have given equal satisfaction to the Government and to the people who were subject to his authority. At his death the succession fell to Burriyar Singh, but the power and glory of the family had long since passed its zenith. Of the 19 Pergunnahs originally in the possession of the family, 16 were now resumed by the Nuwab Asoph-ood-Dowla, and the remaining 3 were, through the influence of Almas Ali Khan, shortly after assigned to Raja Seetul Pershad, Tehseeldar of Kora.

347. Shorn of all power and influence, Burriyar retired across the Jumna, where he maintained himself upon a small pension which he still continued to hold from the Oude Government. At his death Dooniaput, the present Raja of Asothur, succeeded to his father's pension; he had not, however, been long in the enjoyment of it when it was resumed by order of Nuwab Bakur Ali Khan. Upon this Dooniaput crossed the river with a large body of followers, and proceeded to burn and destroy a number of villages in the Pergunnahs of Ekdillah and Ghazeepore,—a course of procedure, however, which had the desired effect of producing an immediate order for the restoration of the pension.

348. On the accession of the present Government the pension was again resumed, upon which the Raja proceeded to take the same course which he had adopted with so much success upon the former occasion. He crossed the river as before with his retainers,

* The Zabtool Akhbar gives a somewhat different account of the affair, but in its main features it corresponds pretty closely with the account given above.

and took up a position near the Village of Jerowlie in Pergunnah Ghazeepore. Mr. Ahmuty, the Collector of Allahabad, accompanied by Nuwab Bakur Ali Khan, proceeded with a body of troops to the spot, with a view of securing the person of the Raja. A collision ensued, in which Mr. Ahmuty was wounded. The Raja fled across the Jumna. In 1212 Fuslee (A. D. 1804), however, he surrendered himself to Mr. Cuthbert, the then Collector of Allahabad, whose guarantee he received, that the pension which he had enjoyed under the Native Government would be continued to him,—a guarantee which was shortly after formally ratified under a sunnud from the present Government, dated the 23rd of May 1805. The pension is Rupees 7,500 per annum, and was declared to be hereditary. Dooniaput has already been in the enjoyment of it during a period of 46 years.

349. Pergunnah Ghazeepore is bounded on the North by Futtehpore, on the South by the Jumna, on the East by Huswa and Ekdillah, and on the West by Ayah Sar and Matour. It contains 83 villages, covers an area of 111·6 square miles, and contains a population of 37,742 souls.

350. No alteration was made in the boundaries of this Pergunnah at the time of Settlement. The village boundaries were marked off in 1838 by the Uncovenanted Deputy Collector; the Professional and Native Surveys were concluded in the year following, and in 1840 Mr. Timins fixed the assessment of the Pergunnah at Rupees 1,14,141, being Rupees 6,950 in excess of the former Jumma. In 1843 Mr. Thornton revised the Settlement, and granted an annual reduction in the Jumma of Rupees 1,303.

351. The deduced Revenue rates of this Pergunnah are,—

Class of Soil.	*Irrigated.* Rs. As. P.	*Unirrigated.* Rs. As. P.
First, ...	3 11 2	2 4 0
Second, ...	3 1 0	1 9 8
Third, ...	1 4 7	0 7 9

352. This Pergunnah is perhaps the least fertile one of the District; the soil, especially in the neighbourhood of the Jumna, is of a very poor kind. Artificial irrigation does not exist to the same extent as in the neighbouring Pergunnahs, and hence it is that the richer kinds of produce are not much grown in this Pergunnah. The staples of the Pergunnah are Jowar, Bajra, Cotton, and Barley.

353. The Pergunnah contains 604 wells, of which 558 are pukka and 46 cutcha. One of the latter description rarely lasts beyond a twelvemonth. There are also 951 cutcha tanks in the Pergunnah. The average depth at which water is found is 60 feet.

354. There are no Manufactures in this Pergunnah. In mouzah Chooriance there is a Saltpetre factory, where about 900 maunds of Saltpetre are annually manufactured for export to the Eastward.

355. There are belonging to the Mahomedan population 7 musjids and other buildings appropriated to religious purposes, and 37 temples and other religious buildings belonging to the Hindoos.

356. The following are the principal villages of the Pergunnah:—

Name of Village or Township.	Area in Acres.	Jumma.	Population.	Remarks.
Ghazeepore, ...	59	4846	1645	The tehseeldar resides here. There is a thannadar also at this place.
Asothur, ...	76	6186	2276	Raja Dooniaput Singh, the head of the Kheechurs, resides here. The estate has been in the possession of his family for several centuries.
Sankha, ...	77	5964	2090	There is a bazar held here twice a week.
Khissan, ...	64	4237	1750	This is a thriving estate. The present owner is Baboo Buktawar Doss, of Futtehpore.

357. The Estates of this Pergunnah are held by the following classes:—

Class.	*Estates.*
Bais, ...	10½
Kheechurs, ...	3
Gowtums, ...	6
Brahmins, ...	13
Kayusths, ...	10½
Mussalmans, ...	20
Other castes, ...	20
Total,...	83

The Bais have already been noticed in the remarks on Futtehpore. The head of the Kheechurs is Dooniaput, of mouzah Asothur. The Gowtums have been noticed in the remarks on Kora. The other classes require no particular notice.

358. The Land Tenures are shown in the Statement below:—

Tenures.	Zemindaree.	Putteedaree.	Imperfect Putteedaree.	Bhyacharee.	Total.
Estates, ...	60	10	11	2	83

359. Forty-seven suits were preferred from this Pergunnah before the Special Commission, for the reversal of sales and other transfers of property fraudulently effected during the earlier years of our rule. Of these cases 18 were decreed and 29 dismissed.

360. The state of Education in the Pergunnah at the close of 1850 is shown in the annexed Statement:—

Name of Pergunnah.	Area in Square Geographical Miles.	Population.	Hindee.		Persian.		Sanskrit.		Arabic.		English, Persian and Oordee.		Total.	
			Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.
Ghazeepore, ...	111·6	37,742	13	69	5	24	3	11	0	0	0	0	21	104

361. The Statement below shows the number, designation and salary of the Police and Revenue Officers entertained in the three* Pergunnahs of this Tehseeldaree, and their percentage of charge upon the Jumma of the Tehseeldaree Division.

* Ghazeepore. Ayah Sar. Matour.

Tehseeldaree Establishment.

PERGUNNAH AYAH SAR.

362. This Pergunnah was so called after the two principal villages belonging to it, Ayah and Sar. It contains 44 villages, comprises an area of 30·3 square miles, and contains a population of 12,541 souls. It is bounded on the North by Futtehpore, on the South by Matour, on the East by Ghazeepore, and on the West by Tuppehjar.

363. The following transfers of villages took place at the time of Settlement:—

Seven Villages Transferred from Futtehpore.

Pergunnah from whence transferred.	Names of Villages.	Area in Acres.	Jumma.	Population.
Futtehpore, ...	Buhooa, ...	2,678	5,143	1,731
,, ...	Kunchocha, ...	323	489	272
,, ...	Doondra, ...	1,069	1,324	600
,, ...	Paharpore, ...	558	733	264
,, ...	Puhrowlie, ...	449	667	400
,, ...	Mohunpore, ...	529	456	137
,, ...	Nundlaipore, ...	173	203	53
Total,...	... ...	5,779	9,015	3,457

364. The demarcation of the village boundaries was entrusted to the Native Deputy Collector. The Professional Survey was conducted by Lieutenant Stephen, the Khusrah Survey was completed in the same year (1839), and in 1840 Mr. Timins fixed the assessment of the Pergunnah at Rs. 42,079. A reduction of Rs. 394 was subsequently granted at the revision by Mr. Thornton in 1843.

365. The deduced Revenue rates as fixed at Settlement were,—

Class of Soil.	*Irrigated.* Rs. A. P.	*Unirrigated.* Rs. A. P.
First, ...	4 0 6	2 11 2
Second, ...	2 7 10	2 1 0
Third, ...	0 0 0	0 10 0

366. This is a productive little Pergunnah, owing to its being abundantly supplied with the means of irrigation in the innumerable small jheels and tanks with which it abounds. Rice is extensively cultivated, and the lands are afterwards sown with Gram or with some other Rubbee product. The Koormee and Lodah classes cultivate also a fair proportion of Sugar-cane. There are 315 wells in the Pergunnah, of which 239 are pukka and 76 cutcha. Water is found at an average depth of 66 feet from the surface. The Pergunnah contains likewise 425 cutcha tanks.

367. There are no Manufactures of any kind in this Pergunnah.

368. The principal Villages are noted below:—

Names of Villages.	Area in Acres.	Jumma.	Population.	Remarks.
Sahkhas, ...	73	5,812	1,991	There is a bazar in this village on Mondays and Thursdays.
Doondra, ...	25	1,314	600	This is the principal village of a large Talooka, paying a jumma of Rs. 3,383.
Buhooa, ...	76	4,312	1,731	There is a large bazar held here twice a week. This village is situated on the high road to Banda.

369. There are no musjids or other religious buildings belonging to the Mahomedans in this Pergunnah,—there are 15 temples belonging to the Hindoos.

370. The distribution of the landed property is shown below :—

Classes.	*Estates.*
Bais, ...	2
Gowtums, ...	2
Rawuts,...	6
Brahmins,...	4
Kayusths, ...	11
Other castes, ...	19
Total, ...	44

The two first classes call for no remark. The head of the Rawuts in this District is Thakoor Loll Sah, of Byjanic, in Pergunnah Futtehpore: the most wealthy landholder of the Kayusths is Nund Loll: the remaining classes do not seem to require any particular notice.

371. The subjoined table shows the several forms of Tenure which exist in the Pergunnah.

Tenures.	Zemindaree.	Putteedaree.	Imperfect Putteedaree.	Bhyacharee.	Total.
Estates, ...	31	6	7	.....	44

372. Of the 15 suits instituted before the Court of Special Commission, 9 were decreed and 6 dismissed.

373. The state of Education in the Pergunnah at the close of 1850 will be seen on reference to the statement below :—

Name of Pergunnah.	Area in Square Geographical Miles.	Population.	Hindee.		Persian.		Sanskrit.		Arabic.		English, Persian and Oordoo.		Total.	
			Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.
Ayah Sar, ...	30·3	12,541	6	26	3	9	3	16	...	...	..	...	12	51

374. This Pergunnah is included in the Tehseeldaree Division of Ghazeepore. For the percentage of charge of the Police and Revenue Establishments of that Division upon its Jumma, *vide* the concluding paragraph of the remarks on Ghazeepore.

PERGUNNAH MATOUR.

375. The ancient name of this Pergunnah was "Koonra" or "Koondah;" the latter term is applied by goldsmiths and others to denote the eye that is let into an ornament or other piece of workmanship, so that it should admit of a chain or other fastening being attached to it. The term was applied to the Pergunnah, it is said, in consequence of the peculiar shape which the river bank assumes in this neighbourhood, and which, in more places than one, was thought to resemble the Koondah as above described.

376. The Pergunnah derives its present name from the village of Matour, which acquired some importance about 200 years ago, as being the residence of Nuwab Abdoo Sumund Khan, who held the office of Naxim under Shah Alumgeer.

377. It is related by the village people that some Chundail Rajpoots, attended by a Brahmin of the Doobi caste, were one day coursing in the vicinity of Matour and had killed a hare, when it was suggested by the Brahmin that the spot seemed a desirable one upon which to found a village. The chief of the Chundails was pleased with the idea, and immediately dismounted from his horse in order that he might mark with his own hands the site of the future village by the erection of an earthen pillar on the spot, but he could find no water. At this moment the horse of the Chundail chief began to stale, the difficulty was at once removed, the pillar was forthwith raised, and in order to mark the event the Rajpoot leader directed that the place should be called "Matour."*

378. Pergunnah Matour is bounded on the North by Ayah Sar and Tuppehjar, on the South by the Jumna, on the East by Ghazeepore, and on the West by the Jumna and part of Tuppehjar. It contains 38 villages, covers an area of 59·3 square miles, and contains a population of 17,896 souls.

379. No alteration in the Pergunnah boundaries was made at the time of Settlement. The village boundaries were marked off by the Uncovenanted Deputy Collector in 1838, the Professional Survey was conducted by Lieutenant Stephen in the year following, the Native Survey was concluded in the same year, and in 1840 Mr. Timins fixed the assessment at Rs. 73,074 which the Jumma was subsequently lowered in 1843 to Rs. 73,039.

380. The deduced Revenue rates as fixed at Settlement were,—

Class of Soil.	*Irrigated.* Rs. A. P.	*Unirrigated.* Rs. A. P.
First, ...	4 9 5	2 15 3
Second, ...	3 14 11	2 4 9
Third, ...	1 10 2	0 10 6

* The word "*mootna*" is in common use, and will be found in every Hindustani dictionary.

381. Most of the villages of this Pergunnah are situated in the immediate vicinity of the Jumna, and are deficient in irrigation. These, however, with scarcely an exception possess the advantage of a large proportion of rich Turree and Cachar, from which are annually raised some of the finest wheat and barley crops in the District.

382. There are 166 wells in the Pergunnah, of which 139 are pukka and 27 cutcha. There are also 951 cutcha tanks in this Pergunnah. Water is found at an average depth of 57 feet from the surface.

383. There are 7 mosques and other buildings of a religious character belonging to the Mahomedans, and 16 temples and other religious buildings belonging to the Hindoos.

384. The principal Villages of the Pergunnah are,—

Name of Village.	Area in Acres.	Jumma.	Population.	Remarks.
Korakunnik, ...	95	8,090	2,500	This estate belongs to a family of Dikhhit Rajpoots, many of whom have now become Mussalman. There is a fair held here in the month of March, called Jumgut, on which occasion there is a large gathering of people from the neighbouring villages.
Lullowlie, ...	111	8,850	1,112	The inhabitants of this village were originally Rajpoots of the Dikhhit caste, but they became Mahomedans about 450 years ago, in the time of Shah Allah-o-deen Ghorie; they still retain, however, many of the Hindoo customs and observances.
Rein,...	27	1,750	675	This was a large and important place in former times. It originally belonged to a family of Seraojees, who built a fort here, the ruins of which still remain; about 250 years ago the Village came into the possession of some Bais Rajpoots; these again were succeeded in later times by a family of Dikhhits whose descendants still hold possession of the village.

385. The Estates of the Pergunnah are thus distributed,—

Classes.	*Estates.*
Dikhhit Rajpoots, ...	6
Seyngur, ...	2½
Kayusths,...	10
Brahmins, ...	6
Mussalmans, ...	6½
Other castes, ...	7
Total, ...	38

386. The Dikhhits of this District came from Bundelcund, they are found in large numbers in this Pergunnah, they formerly held extensive zemindaries under the

Bhyacharee form of tenure, but at present they hold only 6 villages; they are by far the largest class of cultivators in the Pergunnah. The Seyngur tribe came from Bundelcund also; the head of the clan is the Raja of Jagumunpore, in Jaloun.

387. There are no Manufactures of any description in this Pergunnah.

388. The subjoined Statement will show the different forms of Tenures that obtain in the Pergunnah,—

Tenures.	Zemindaree.	Putteedaree.	Imperfect Putteedaree.	Bhyacharee.	Total.
Estates, ...	23	6	3	6	38

389. Of the 10 suits preferred before the Court of Special Commission, decrees were given in 2 cases and in 8 the claim was dismissed.

390. The state of Education in this Pergunnah at the close of last year will be seen on reference to the Statement below:—

Statement of Schools and Scholars in Pergunnah Matour at the close of 1850.

Name of Pergunnah.	Area in Square Geographical Miles.	Population.	Hindee.		Persian.		Sanskrit.		Arabic.		English, Persian and Oordoo.		Total.	
			Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.
Matour, ...	59·3	17,896	10	62	6	26	3	43	0	0	0	0	19	131

391. This Pergunnah belongs to the Tehseeldaree Division of Ghazeepore; the number, designation and pay of the several Officers, Police and Revenue, of that Division, as also their percentage of charge, have already been shown in the Remarks upon Pergunnah Ghazeepore.

PERGUNNAH EKDILLAH.

392. The ancient name of this Pergunnah was "Rarec." It was so called after a large Rajpoot village of that name, situated in the South-East corner of the Pergunnah. The zemindars of this Estate are said to have been a most refractory set, and to have given considerable trouble to the Amil and others engaged in the collection of the Revenue. In the time of Shooja-oo-Dowlah they openly resisted the authority of the Government officers, and on more than one occasion they are said to have had the best of the contest.

393. Owing to the turbulent spirit displayed by these zemindars it was thought advisable to remove the Tehseeldaree to the neighbouring village of Ekdillah, where a strong fort was built by the Amil, and in which the business of the Pergunnah has ever since been conducted.

394. The village of Ekdillah is situated on the bank of the Jumna, and the people of the place have a tradition that in olden times there existed near the spot an enormous burgut tree, one of whose branches stretched from bank to bank, and thus enabled travellers to effect the passage of the river without the aid of bridge or boat. Common sense will at once reject a tale so palpably absurd, yet it is surprising with what tenacity the villagers cling to the tradition, and assert their entire belief in its truth.

395. Pergunnah Ekdillah is bounded on the North by Hutgaon, on the South by the Jumna, on the East by Pergunnah Dhata and Zillah Allahabad, and on the West by Ghazeepore and Huswa. It contains 145 villages, has an area of 129 square miles and a population of 26,962 souls.

396. The following transfers were made at the time of Settlement:—

One Village transferred from Pergunnah Dhata.

Pergunnah from whence transferred.	Village.	Jumma.	Area in Acres.	Population.

One Village transferred to Pergunnah Kurrah, Zillah Allahabad.

Pergunnah from whence transferred.	Village.	Jumma.	Area in Acres.	Population.
From Ekdillah, ...	Baluknow, ...	937	Not traceable	Not traceable

397. The demarcation of the village boundaries was made in 1838 by the Native Deputy Collector, Manick Chand, the Professional Survey was completed in the year following, and in 1840 the assessment was fixed by Mr. Timins at Rs. 1,69,281, being Rs. 14,815 in excess of the former Jumma; the assessment was found to be beyond what the Pergunnah could pay, and a reduction of Rs. 3,161 was subsequently sanctioned in 1843.

398. The deduced Revenue rates are,—

Class of Soil.	Irrigated. Rs. A. P.	Unirrigated. Rs. A. P.
First, ...	3 12 2	2 7 3
Second, ...	3 4 4	1 12 9
Third, ...	1 4 11	0 10 6

399. The Pergunnah is one of varied fertility. In its Northern quarter there are some of the most highly cultivated estates in the District, the soil being of the richest description, and artificial irrigation always available. A large quantity of Rice is grown, and generally a luxuriant Rubbee crop is afterwards raised from the same land. The poorest villages are to the Westward, in the direction of Ghazeepore; here the soil is very indifferent and irrigation scanty. Near the Jumna there is a fair proportion of Turree, and the large talooka of Kōt enjoys the advantage of an extensive tract of rich Cachar, which is highly productive. The staple products are Rice, Cotton, Gram, and Wheat.

400. The large talooka above referred to has been in the possession of a tribe of Mussalmans called Khokur, since the time of Allah-o-deen, the founder of the Ghorain dynasty. Mr. Timins gives the following account of the tribe in his Settlement Report of the District:—

401. "The proprietors of Talooka Kōt form a distinct tribe, whose history "extends to a remote period, and who are quite a separate and in their own opinion "superior class to the generality of Mussalmans in the District. The founder of their "family was Mullick Bhabul, a rissaldar in the service of Sultan Allah-o-deen, the first "monarch of the Ghorian dynasty, who flourished 700 years ago. He was of the tribe "of Khokur in Affghanistan, and having been endowed as a reward for his services with "the village of Kōt, the site of which was in those times occupied by a strong fort, "established himself there. His family prospered, and his descendants rapidly increased "in number and extended their possessions. At later periods and at various intervals "they purchased the several estates which now constitute the talooka, the chief village "of which has been in the possession of this one family for an uninterrupted period of "700 years. The tribe now numbers about 8,000 males; they pride themselves on the "antiquity and purity of their descent, and keep themselves much apart from the other "Mussalmans, whom they affect to regard as an inferior class; they will intermarry with "the families of Sheikhs or Syuds, but look upon a Mogul or a Pathan as quite a "'*novus homo*,' with whose family it would be derogatory to form a connexion. Numbers "of them enter the army; indeed, they follow no other profession; those who find their "share in the talooka insufficient to support them take service as sepoys. Although "they are so numerous and by no means united, having frequently serious disputes, they "have never been known to apply to the courts for redress, always settling their differences "amongst themselves. About 1,600 hold shares in the talooka as proprietors. The "Revenue is collected by a bauch on possession arranged many years ago, and which "is still in force."

402. There are 663 wells in this Pergunnah, of which 601 are pukka and 62 cutcha; there are also 1,383 cutcha tanks, of which 1,087 are made use of for irrigation. The average depth at which water is met with from the surface is 70 feet.

403. The only article of trade is Cotton. Merchants from Cawnpore, Allahabad, and the Oude territory buy up the article in large quantities and export it to Mirzapore and other places to the Eastward.

404. The principal Villages of the Pergunnah are,—

Names of Villages.	Area in Acres.	Jumma.	Population.	Remarks.
Raree, ...	40	3,944	743	This was the head quarters of the Amil under the Native Government.
Kót Khas,...	36	4,514	1,051	This village was founded about 700 years ago, by Mullick Bhabur.
Ekdillah, ...	50	1,047	552	The tehseeldar resides here.
Kukreydoo, ...	23	2,600	318	A large bazaar is held here for the sale of cotton. There is a Thannah station at this place.
Kishenpore, ...	56	No Malgozaree Area.	1,868	Floor-cloths, coverlets for beds, &c., are made here. There are about 100 shops engaged in the trade. The floor-cloths are manufactured of every imaginable pattern, and find a ready sale at Cawnpore and elsewhere.

405. The Pergunnah contains 49 mosques and 9 imambarehs belonging to the Mahomedans, and 93 temples and other religious buildings belonging to the Hindoos.

406. The Estates are held by the following classes,—

Classes.	*Estates.*
Bais, ...	3
Towars, ...	1
Bisains, ...	2
Kheechurs, ...	1
Doogdhas, ...	3
Lodhas, ...	12
Khokurs, 18; other Pathans, 4, ...	22
Sheikhs, ...	16
Syuds, ...	6
Brahmins, ..., ...	19
Kayusths,...	27
Khutrees, ...	15
Other castes, ...	18
Total, ...	145

407. The Bais have already been noticed. The Towars trace their descent from the time of the accession of the Towar dynasty, about the middle of the 8th century. The Bisains have been mentioned in the remarks on Pergunnah Huswa. The Kheechars have been noticed in the notes on Pergunnah Ghazeepore. For an account of the Doogdha tribe, *vide* Elliot's Supplemental Glossary. At the cession the Lodhas held double the number of Estates they now do. The Mussalman classes have been considerable gainers during our rule. The Brahmins have also increased the number of their holdings from 7 to 19, and the Khutrees, who at the commencement of our Rule had not a single estate, are now holders of 15.

408. Previous to the accession of our Government the classes who exercised the greatest influence in the Pergunnah, and who were the largest landholders, were the

Chowdrees, the Canoongoes, and the Raoots caste. The Chowdrees were of the caste called Bais, and their power was greater than that of any other class, a circumstance that may be ascribed to the responsible nature of the office they filled. In addition to other duties the Chowdree was expected to stand security for the zemindars, and he was held responsible for the payment of the Government demand. If default occurred on the part of the zemindars, the Chowdree took possession of the defaulter's estate as a matter of course, and he not unfrequently did so when there was no default at all. Of the 41½ mouzahs which were held by Rajpoot tribes in the Fuslee year 1209, paying a Jumma of Rs. 35,979, no less a number than 32½ mouzahs, paying a Revenue of Rs. 26,611, belonged to the Chowdrees: they have lost much of their power since the accession of the present Government, but they are still a very influential class in the Pergunnah. The Assamees in many of the villages still continue to pay to them the tax upon the mohwa known under the term of "koot," and in mouzah Raree and in other villages, where the cultivators are of this class, the zemindar allows them to cultivate a certain portion of land rent-free.

409. The next in importance to the Chowdrees were the Canoongoes; these were invariably men of the Kayusth caste, and the office was considered to be hereditary. In 1209 the Kayusths held 27½ estates, paying a Jumma of Rs. 12,479; they still hold 20 estates, paying a Jumma of Rs. 12,804.

410. Next in the scale of importance come the Raoots, a branch of the Lodha caste; men of this class were commonly appointed to the office of Chowdree. At the cession they held 19½ estates, paying a Jumma of Rs. 26,398. The number in their possession at present is only 7, the annual Jumma of which is Rs. 7,954. They received the title of Raoot, it is said, in the time of Ackbar, through the interest of a member of their family named Beerbul, who was in the service of that Prince.

411. The following Statement shows the Land Tenures of the Pergunnah:—

Tenures.	Zemindaree.	Putteedaree.	Imperfect Putteedaree.	Bhyacharee.	Total.
Estates, ...	88	2	55	0	145

412. Sixty-two suits were instituted before the Special Commission; decrees were given in 36 cases, and in 26 the claim was dismissed.

413. The state of Education in the Pergunnah at the close of 1850, will be seen on reference to the Statement below:—

Name of Pergunnah.	Area in Square Geographical Miles.	Population.	Hindee.		Persian.		Sanskrit.		Arabic.		English, Persian and Oordoo.		Total.

PERGUNNAH DHATA.

415. This Pergunnah until 1197 Fuslee was included in Pergunnah Raree. In that year, owing to some disputes amongst the Koormees of the neighbourhood, it was deemed advisable to appoint a separate zillahdar at Dhata; this officer had charge of 46 villages. Since the cession Dhata has constituted a distinct Pergunnah. The Pérgunnah is bounded on the North by Ekdillah, on the South by the Jumna, on the East by Zillah Allahabad, and on the West by Ekdillah. It contains 88 villages, has an area of 23·6 square miles, and contains 5,722 inhabitants.

416. The following transfer took place at Settlement:—

One Village transferred to Pergunnah Ekdillah.

Pergunnah from whence transferred.	Name of Village.	Area in Acres.	Jumma.	Population.
Dhata, ...	Sulempore, ...	367	530	171

417. The demarcation of the village boundaries was made by the Native Deputy Collector in 1838, the Professional and Native Surveys were completed in the year following, and in 1840 Mr. Timins fixed the assessment at Rs. 34,802, being an increase of Rs. 4,137 upon the former Jumma.

418. The deduced Revenue rates were,—

Class of Soil.	*Irrigated.* Rs. As. P.	*Unirrigated.* Rs. As. P.
First,..	3 13 10	2 6 8
Second, ...	3 3 7	1 12 4
Third, ...	1 4 7	0 10 4

419. The soil of this Pergunnah is more productive than that of the adjoining Pergunnah of Ekdillah. It possesses more abundant means of irrigation than Ekdillah, and the cultivators are almost entirely of the Koormee caste. Both harvests are equally productive, and the Government dues are realized without difficulty.

420. There are 77 wells in the Pergunnah, of which 69 are pukka and 8 cutcha; there are likewise 162 mud tanks, the whole of which are used for irrigation; water is found at an average depth of 67 feet.

421. There are 3 Mahomedan places of worship and 7 buildings of a similar character belonging to the Hindoos.

422. There are no Manufactures of any kind in the Pergunnah. Its Cotton and other agricultural produce is bought up for export by the merchants of the adjoining Districts.

423. The chief Villages are,—

Names of Villages.	Village Area.	Jumma in Rupees.	Population.	Remarks.
Dhata Khas, ...	76	4,828	988	The inhabitants of this village are noted for their skill in pottery.
Ranеepore, ...	6	501	83	A bazar is held here twice a week for the sale of Salt, Cotton and Grain.

424. The landed property is held by the following classes:—

Classes.	*Estates.*
Koormees, ...	27
Brahmins, ...	6
Moosulmans, ...	5
Total, ...	38

425. The status of zemindaree possession has undergone very little change within the last 50 years. The Koormees, it will be seen, are still the largest landholders, a circumstance which fully explains the thriving condition of this little Pergunnah.

426. The Land Tenures are distributed as below:—

Tenures.	Zemindaree.	Putteedaree.	Imperfect Putteedaree.	Bhyacharee.	Total.
Estates, ...	34	0	4	0	38

427. Nineteen suits were preferred from this Pergunnah before the Court of Special Commission. Decrees were given in 7 cases, and in 12 the claim was dismissed.

428. The state of Education in this Pergunnah, at the close of 1850, will be seen on reference to the Statement below:—

Name of Pergunnah.	Area in Square Geographical Miles.	Population.	Hindee.		Persian.		Sanskrit.		Arabic.		English, Persian and Oordoo.		Total.	
			Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.
Dhata, ...	23·6	5,722	2	15	1	7	2	25	0	0	0	0	5	47

429. This Pergunnah belongs to the Tehseeldaree of Ekdillah, and there is no separate Revenue or Police Establishment for it. The establishments entertained within the Tehseeldaree Division, as likewise their percentage of charge, have already been shown in the concluding paragraph of the remarks on Pergunnah Ekdillah.

PERGUNNAH HUTGAON.

430. It is related that in the time of Jye Chund, Raja of Canouj, there dwelt in this Pergunnah a recluse named Parasoor Rikh, who by the performance of certain miracles, and in other ways, had acquired a great influence over that prince, and had received many valuable presents in token of the royal favor. Amongst the presents that, at various periods, had been conferred upon him was a male elephant; and on the occasion of his being presented with this animal, it was intimated to him that he should receive in jagheer as many villages of the Pergunnah as the said elephant might be enabled to walk round without once sitting down to take rest. It is said that the elephant having walked over the lands of Hutgaon, arrived at a village called Iradutpore Dhami, when being quite overpowered with fatigue, he sat down and was immediately turned into stone. The people of the place worship the stone elephant every Tuesday, and once a year, in Bhadoon, (Soodipunchomi,) an immense concourse of people assemble together to do honor to the memory of their ancestor, Parasoor Rikh.

431. Kusbah Hutgaon was founded by the descendants of the above-named Rikh, and from him sprang the two classes known in the Pergunnah under the denomination of "Parasoori Deechit" and "Raezadeh",—the former being descended from a Brahminee mother, whilst the latter claim to be descended from a daughter of the King of Canouj.

The Parasoori Deechits at present hold only two estates in the Pergunnah, but the Raezadehs have still 26 villages.

432. Hutgaon is bounded on the North by Kotlah, on the South by Ekdillah, on the East by Zillah Allahabad, and on the West by Pergunnah Huswa. It contains 266 villages, has an area of 168·3 square miles, and contains a population of 74,007 souls.

433. The following transfers were made at the time of Settlement:—

Thirteen Villages transferred from Pergunnah Kurrah, Zillah Allahabad.

Hutgaon to Kurrah,... ...	Mohbutpore Pynsah, ...	1,764	Not traceable amongst the records of the office.	Not traceable amongst the records of the office.
Ditto to ditto, ...	Moongree, ...	214		
Ditto to ditto, ...	Allypore Gotta, ...	500		
Total, ...	... ...	2,478		

484. The village boundaries were marked off by the Native Deputy Collector, Manick Chand, in 1838, the Professional and Khusrah Surveys were both completed in the year following, and in the early part of 1840 Mr. Timins fixed the assessment of the Pergunnah; the Jumma was raised from Rs. 1,55,661 to Rs. 1,76,510, but at the subsequent revision, which took place in 1843, a reduction of Jumma was sanctioned to the extent of Rs. 8,686.

485. The deduced Revenue rates were,—

Class of Soil.	Irrigated. Rs. A. P.	Unirrigated. Rs. A. P.
First, ...	3 11 8	2 7 0
Second, ...	3 1 4	1 12 7
Third, ...	1 4 9	0 10 5

486. This is a very productive Pergunnah; the soil is excellent, and irrigation is easily obtained. In the Southern and Western quarters Rice is very extensively

grown, abundant irrigation being always obtainable from the numerous jheels and ponds which abound in those directions. As soon as the rice crops are off the ground the land is again sown with wheat or barley, or some other Rubbee product. Towards the Ganges the soil is not so well suited for Rubbee cultivation, but the Khurreef which it produces is equal to any in the District.

437. The Pergunnah contains 2,474 wells, of which 1,589 are pukka and 885 cutcha; there are also several jheels in different parts of the Pergunnah, the whole of which afford irrigation; water is found at an average depth of 45 feet from the surface.

438. A tributary of the Sursoo Khadery takes its rise in this Pergunnah, and flowing in a South-easterly direction, unites with the main stream in Pergunnah Ekdillah. Thirty-five villages are situated on the banks of this rivulet, and some of the finest crops in the District are produced from the Cachar lands in the immediate vicinity of this stream. Embankments are thrown up by the zemindars in several places, and every means taken to secure the water of the rivulet for the purposes of irrigation.

439. With the exception of a coarse kind of cloth known under the name of Tookree, there are no Manufactures of any kind in this Pergunnah.

440. Bazars are held in the under-mentioned villages for the sale of grain, groceries, cattle, and cloth:—

Hutgaon Khas.	Boodwan.
Kasimpore.	Khaga.

In the first-named village there is a Saltpetre factory, the annual out-turn of which is about 800 maunds.

441. There are in the Pergunnah 55 musjids and other religious buildings belonging to the Mahomedans, and 35 temples and other religious buildings belonging to the Hindoos.

442. The principal Townships are noted below:—

Township or Village.	Area of Village.	Jumma.	Population.	Remarks.
Hutgaon, ...	79	2,149	4,276	The Tehseeldar and Thannadar were formerly stationed here, they have now been moved to the Trunk Road.
Bahadurpore Khaga, ...	61	3,602	1,256	The Tehseeldar and Thannadar are located here.
Kutonghun, ...	40	3,948	2,028	This village is on the Trunk Road; there is a Military encamping ground here, and a large serai has been recently built for the accommodation of travellers at the cost of Government.
Boodwan, ...	36	4,909	2,100	There is a large bazar held here.

443. There are several talookas in this Pergunnah, of which the largest and most valuable are those of Arampore Busahee and Bahadurpore Khaga; the former contains no less than 53 mouzahs, covers an area of 26,415 acres, and pays an annual Jumma

of Rs. 32,209; the latter comprises 19 mouzahs, has an area of 10,799 acres, and pays a Jumma of Rs. 10,993.

444. Arampore Busahee is the hereditary property of two brothers, Sadiq Ali and Roostum Ali, sons of the late Mahomed Bakir, who held the office of Chowdry under the Government of the Nuwab Vizier. On the death of the Chowdry, the talooka was divided into three shares, one of which was assigned to his widow Nunhee Beebee, who called it Ujnahee, after the principal village belonging to it; a second share was assigned to Sadiq Ali and named by him Ishakpore, and the remaining share was allotted to the other brother, Roostum Ali, and retains the name of the talooka, *viz.*, "Arampore Busahee." On the death of Nunhee Beebee, her share was equally divided between the two remaining sharers. At the revision of Settlement the component villages of the several shares were separately assessed, but the talooka was recorded as 3 muhals, in accordance with the sub-division above noted. At the subsequent revision, in 1843, Mr. Thornton deemed it advisable to constitute each of the component mouzahs a separate muhal. The two brothers seem always to have been on unfriendly terms, and up to the time of the death of Sadiq Ali, which occurred only a month since, were constantly embroiled with one another in some dispute or other relative to their respective properties; with the death of Sadiq Ali, these disputes have terminated, and Roostum Ali, the surviving brother, who is childless, has formally adopted his brother's only son, Ata Hoosain, who, on the death of his uncle, will become the sole proprietor of this fine estate.

445. Talooka Bahadurpore Khaga was the hereditary property of an old family of the Lōdha caste, the present representative of which is Duriao Singh, commonly called "Thakoor Duriao Singh," who succeeded to the estate on the death of his father, Murdun Singh, in 1824. From this time the fortunes of the family would seem to have gradually declined.

446. The character of Durino Singh is a singular one. Amongst much that is bad in his nature there are still some points of it which, if they are not exactly calculated to command our admiration, will at least excite our sympathy. We see before us a proud uneducated man, possessed of immense animal strength, great personal courage, and ungovernable passions; we see this man as the representative of an ancient family, administering, at an early period of his life, the affairs of a large talooka, and in the exercise of the authority thus imposed upon him, obeying no other law than the dictates of his own wild and undisciplined nature; we see him at one time betrayed by infirmity of temper into the commission of deeds of violence and oppression, at others we find him lavishing large sums of money in acts of charity and benevolence, and dispensing unbounded hospitality to the surrounding country, unmindful of the certain ruin in which he was involving himself by the indulgence of an expenditure which he had no possible means of supporting.

447. To such a reckless course of life there could be but one termination, and though, by one stratagem or another, he continued for a series of years to baffle all the designs of his numerous creditors, still the day of reckoning came at last; the proud spirit of the debtor has been humbled, he has been made to feel the power of the law he so long affected to despise, and to behold the whole of his patrimony, under the operation of that law, transferred to the hands of a stranger.

448. At the period of the cession the talooka comprised 19 villages, the whole of which have always been classed together as one muhal.

449. In 1834 the Collector was instructed by the Civil Court to bring to sale 4 of the constituent mouzahs; the sale, however, never took place. In 1842 the Collector was again instructed to bring to sale two other mouzahs (Hurdon and Kokra), these were accordingly put up and knocked down for Rs. 2,030 to Hursahai and Ramsahai, sons of the decree-holder. On orders being given to put the purchasers in possession, it appeared that neither the boundaries nor the area of the villages had ever been defined during the period of the British Rule; the Collector was, therefore, unable to give the parties possession, and he reported accordingly.

450. The Sudder Board directed further inquiries* to be made: the Deputy Collector, Mr. Read, was accordingly deputed to the spot; he reported that no sufficient data were obtainable on which the villages could be separated.† Mr. John Thornton next visited the talooka, and at the close of his inquiries records the following opinion:—"Partly from the lapse of time since these villages formed one talooka, and partly from the unlimited influence which the present owner of the talooka exercises within its limits, there does not exist at present any attainable means of separating the several estates according to their original boundaries."‡

451. The Board, concurring in opinion with the Collector, ruled, under date the 2nd June 1843, that in order to give the auction purchasers possession of the shares of those whose rights and interests had been sold, it would be necessary for the Court to determine, firstly, whether separate possession was to be given, and next the extent of those shares, whether a tenth, twentieth or a hundredth part of the whole muhal.

452. In 1845 the whole talooka came into the possession of Nuwab Moozuffer Hoosain Khan, who held 8 annas as proprietor, in virtue of a sale held under a decree of Court, and the remaining 8 annas as farmer under a Revenue transfer concluded with him in the latter part of 1845.

453. In the year following the auction purchasers of Hurdon and Kokra revived their claim to a separation of these two mouzahs; their claim was dismissed by the Commissioner, and the parties were referred to the Civil Court.

454. In the month of May following, Moozuffer Hoosain Khan petitioned the Commissioner for a partition of the whole of the constituent mouzahs of the muhal; the Collector was directed to give effect to the petitioner's prayer. The Nuwab had recently purchased the rights and interests of Hursahai and Ramsahai, in Hurdon and Kokra, it was to him therefore an object of paramount importance that the villages should be separated, and the Government had already declared the measure to be a very desirable one if it could be effected.§

---

* Commissioner to Collector, dated the 23rd July 1842, No. 262.

† Collector to Commissioner, dated the 23rd September 1842, No. 484.

‡ Collector to Commissioner, No. 140, dated the 16th May 1843.

§ Secretary to Government, dated the 25th of January 1847.

455. Fresh inquiries were accordingly instituted by the Collector, and under circumstances peculiarly favorable for eliciting the real facts of the case. The Collector in submitting the result of those inquiries, thus sums up: "I have now laid before you "the data upon which it is proposed to attempt the separation of the constituent mouzahs "of the talooka; whether it be practicable or not upon such data to carry the measure "into effect is a question not for me but for the Board to determine; but I may be per- "mitted to observe that until the disagreement between the several mowazineh lists can "be reconciled, and the number and names of the several villages, Uslee and Dakhillee, "be satisfactorily determined, I do not myself see how it will be possible to separate the "villages. The Jumma wasil-bakee account, referred to in paragraph 14 of this letter, "shows that so far back as A. D. 1763, the talooka was an undivided muhal, comprising "26 Uslee and 8 Dakhillee villages; and the Settlement record of 1210 Fuslee further "shows that it was still undivided in 1207 Fuslee, or three years prior to the accession of "the present Government; a period, therefore, of 85 years at the very least must have "elapsed since the constituent mouzahs of the talooka existed as separate and inde- "pendent villages; whether it is probable or even possible after so long a lapse of time "that the original boundaries of those mouzahs can still be traced, I leave it to yourself "and to the Board to determine."—*Collector to Commissioner, No.* 65, *of* 30*th May* 1848.

456. The Commissioner was not satisfied with the Collector's arguments, nor with the conclusion he had drawn from them, and determined on taking the management of the case into his own hands. The Tehseeldar of Bindkee was accordingly deputed a second time to the talooka, and written instructions were furnished to him for his guidance from the Commissioner's Office. The Tehseeldar's operations would seem to have been prosecuted with vigour and discrimination, the lost boundaries were found, the agent of the ex-Talookdar signed the customary papers, the component mouzahs were duly separated, and at the close of the partition, which followed shortly after, the shares of the two proprietors stood as follows:*

Jumma of Talooka Bahadurpore Khaga, Rupees 10,993.

Share of Moozuffer Hoosain Khan.			Share of Soojan Singh, son of Duriao Singh.		
Muhal.	Area in Acres.	Jumma.	Muhal.	Area in Acres.	Jumma.
Shazadpore Khaga,...	1,758	1,902	Bahadurpore Khaga, ...	2,006	1,600
Soojrahee, ...	631	475	Lakhipore, ...	242	325
Soojanipore, ...	535	550	Lowkiapore, ...	751	824
Kokree, ...	301	298	Sungrampore, ...	432	550
Pambipore, ...	346	334	Tilkapore,...	139	160
Hurdon, ... Purchased from Hursahai and	3,141	3,500	.....	0	0
Kokra, ... Ramsahai, ...	517	375	.....	0	0
Total Share, ...	7,229	7,434		3,570	3,559

457. Seventy-six suits were instituted from this Pergunnah before the Court of Special Commission; 44 cases were decreed, and 32 dismissed.

* Since writing this and the preceding paragraphs, orders have been received from the Civil Court to bring to sale Soojan Singh's remaining share in the talooka, in satisfaction of a decree obtained by Moozuffer Hoosain Khan. The ruin, therefore, of the old proprietors is at length consummated, and the whole of their patrimony will shortly pass into the possession of strangers.

458. The Estates are held by the following classes:

Classes.	Estates.
Raezadehs, ...	26
Bais, ...	5
Chundails, ...	2
Brahmins, ...	13
Kayusths, ...	57
Mussalmans, ...	140
Other castes,...	23
Total, ...	266

The Raezadehs have been mentioned above, in paragraph 430. The two next classes have been noticed likewise in the remarks on the other Pergunnahs. The other classes require no particular notice.

459. The different forms of tenure obtaining in the Pergunnah are shown in the annexed Statement:

Tenures.	Zemindaree.	Putteedaree.	Imperfect. Putteedaree.	Bhyacharee.	Total.
Estates, ...	245	11	44	6	306

460. The state of Education in this Pergunnah at the close of last year, will be seen on reference to the Statement below:

Name of Pergunnah.	Area in Square Geographical Miles.	Population.	Hindee.		Persian.		Sanskrit.		Arabic.		English, Persian and Oordoo.		Total.

64	Total, ...	576	6,912	2,10,111	3 4 7

Including Pergunnah Kotlah.

PERGUNNAH KOTLAH.

462. The original name of this Pergunnah was "Kōt-gao," signifying ten millions of cows. The story is, that the famous Jye Chund, of Canouj, built a fort in this Pergunnah on the bank of the Ganges, and gave a kōt of cows on the occasion to the Brahmins; in process of time the initial letter of the word "*gao*" was changed from ک to ج.

463. Kotlah is bounded on the South and East by Hutgaon, on the North by the Ganges, and on the West by Futtehpore. It contains 146 villages, has an area of 30·8 square miles, and contains a population of 17,035 souls.

464. The following transfers were made at the time of Settlement:—

Eleven Villages transferred to Pergunnah Futtehpore.

Pergunnah from whence transferred.	Names of Villages.	Jumma.	Area in Acres.	Population.
Pergunnah Kotlah, ...	Bunouhar, ...	688	572	341
,, Ditto, ...	Tehree, ...	421	347	41
,, Ditto, ...	Chuk Rehra, ...	65	30	10
,, Ditto, ...	Rehmut Doulutpore, ...	939	406	262
,, Ditto, ...	Rahrah, ...	335	232	101
,, Ditto, ...	Sulimpore, ...	415	209	59
,, Ditto, ...	Serbrahimpore, ...	1,527	789	1,018
,, Ditto, ...	Ghoree, ...	601	319	190
,, Ditto, ...	Lohara, ...	1,320	639	427
,, Ditto, ...	Nurrowlie, ...	1,601	982	639
,, Ditto, ...	Hussopore, ...	937	753	438
	Total, ...	8,849	8,233	3,526

One Village transferred to Pergunnah Hutgaon.

Pergunnah from whence transferred.	Name of Village.	Jumma.	Area in Acres.	Population.
Kotlah, ...	Khurehra, ...	185	65	74

465. The demarcation of the village boundaries was made by the Uncovenanted Deputy Collector in 1838, the Professional and Native Surveys were both completed in the year following, and in the early part of 1840 Mr. Timins fixed the assessment of the Pergunnah at Rs. 37,617, being an increase of Rs. 2,932 on the former Jumma; in 1843 Mr. Thornton revised the Settlement, and lowered the Jumma of this Pergunnah to Rs. 37,287.

466. The deduced Revenue rates are,—

Class of Soil.	Irrigated. Rs.	A.	P.	Unirrigated. Rs.	A.	P.
First, ...	3	5	1	2	0	11
Second, ...	2	11	0	1	6	9
Third, ...	0	15	2	0	7	7

467. This is not a very productive Pergunnah, the soil is not sufficiently rich to admit of the more valuable Rubbee crops being raised from it. It has the advantage, however, of abundant irrigation from the many tanks and jheels that abound in the Pergunnah, and which retain water until a late period of the year. The largest jheel in the District is in this Pergunnah; it measures 4½ miles in length, and has an average breadth of about ½ a mile.

468. The principal products are Rice of the commoner kinds, Moth, Bajra, and Murooa. There are 980 wells in the Pergunnah, of which 271 are pukka and 709 cutcha, and water is found at a depth of about 60 feet from the surface.

469. There are 21 mosques and other religious buildings belonging to the Mahomedans, and 7 temples and other religious buildings belonging to the Hindoos.

470. There are no Manufactures in this Pergunnah.

471. The principal Villages are,—

Village or Township.	Village Area.	Jumma.	Population.	Remarks.
Nowabgunj, ...	15	No assessed lands, ...	421	There is a large bazar held here twice a week for the sale of Grain, Cattle, and coarse Cloth.
Kotlah Khas, ...	11	68	699	There is a small bazar here.
Puttee Shah, ...	34	901	774	Ditto ditto.

472. The Estates in this Pergunnah are held by the following classes:

Classes.	Estates.
Bais, ...	6
Chowhans, ...	3
Brahmins, ...	14
Kayusths, ...	17
Mussalmans, ...	100
Other castes, ...	6
Total, ...	146

473. The Chowhans are a branch of the Mynpoorie family. As regards the other classes little or no change would appear to have taken place in the zemindaree holdings since the accession of the present Government. At the cession the Brahmins held 12 estates, they now hold 14; the Kayusths held 16, they now hold 17; and the Mussulmans held 103 at the cession, and now hold 100.

474. The tenures are exhibited in the annexed Statement:

Tenures.	Zemindaree.	Putteedaree.	Imperfect Putteedaree.	Bhyacharee.	Total.
Estates, ...	118	5	21	2	146

475. Forty-one suits were preferred before the Special Commission; in 26 cases the parties obtained decrees, and in 15 the claim was dismissed.

476. The state of Education in the Pergunnah at the close of 1850 will be seen on reference to the Statement below:

Name of Pergunnah.	Area in Square Geographical Miles.	Population.	Hindee.		Persian.		Sanskrit.		Arabic.		English, Persian and Oordoo.		Total.	
			Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.
Kotlah, ...	30·8	17,035	9	60	8	38	3	10	0	0	0	0	20	108

477. This Pergunnah belongs to the Tehseeldaree Division of Hutgaon. The Establishments belonging to that Division and their percentage of charge on the Jumma of the Division have been noted in the concluding paragraph of the remarks on Pergunnah Hutgaon.

C. W. KINLOCH,
Collector and Magistrate.

FUTTEHPORE COLLECTORSHIP,
July 1851.

APPENDIX No. I.

(VIDE PARA. 18.)

MR. SEYERS'S REPORT

ON THE

OPIUM TRANSACTIONS

OF THE

FUTTEHPORE DISTRICT.

SYNOPSIS OF PROCEEDINGS

ADOPTED FOR

ENCOURAGING AND FORWARDING THE POPPY CULTIVATION,

IN THE

DISTRICT OF FUTTEHPORE,

WITH SOME REMARKS UPON GENERAL MANAGEMENT, &c.

Futtehpore formed a part of the Allahabad District.

When the Poppy Cultivation was first introduced in this quarter, Futtehpore appears to have been united to the District of Allahabad; and as the records have not been carefully preserved, the results of the first few years' operations cannot be known without reference to the Opium Agent's Office at Ghazeepore.

1826. Futtehpore constituted a separate Deputy Opium Agency.

2nd. In the year 1826, Futtehpore was placed as a separate Deputy Opium Agency under the control and management of Mr. A. F. Lind, Collector of Revenue, and he received charge of the Opium Accounts, &c., with a suitable proportion of the establishment employed for the Poppy Cultivation, from Mr. J. Dunsmure, Collector and Deputy Opium Agent of Allahabad, with instructions that he was also to avail himself of the services of the Tehseeldars and other Revenue Officers attached to the Collectorate, for the general supervision of the Poppy Cultivation and provision of the Drug; and experienced men, styled Mahtoes, were sent from Ghazeepore to instruct the Assamees in the management of the cultivation, extracting the juices, separating the excess moisture, dew, &c., and preparing the Opium.*

Obstructions and difficulties opposing the Poppy Cultivation.

3rd. The Deputy Opium Agent met at the outset some difficulty in forwarding the new cultivation, the chief obstacle being the well-known apathy and indifference of the natives, in any matter requiring a change of habits, and their total want of enterprise, whether for improvement or profit, particularly when the innovation involved a greater amount of personal attention and care than they were before accustomed to bestow upon their crops, (as may be seen in paras. 1 to 5 in the Appendix,) and which, under the supervision of Government servants, would be enforced when once an engagement (bundobust) was entered upon.

Dislike shown by the Zemindars, and wherefore.

4th. The Zemindars viewed with suspicion and distrust the introduction of a new agricultural staple which was to have the direct patronage of Government, and the active interest taken by the Revenue Officers in its progress, led them to fear that the whole of the best lands would gradually be taken up for it, and that eventually an increased assessment of all lands in the District would be the result; and further, they dreaded that the new system would render the Ryots more independent, and enable them, as Assamees under Government protection, to resist the unjust and oppressive demands hitherto exacted from them by their Landlords, who commonly, when they pleased, called for and enforced the attendance of the Ryots, with their cattle and implements for ploughing and irrigating their (the Zemindar's) khas

---

* See Pussewah, para. 20th.

lands, without any payment or remittance of their rents; but the Ryots, on the other hand, were not slow in perceiving the support they should derive from the Poppy Cultivation against these exactions, also generally against being pressed for begaree service, with travelling encampments of military or other public Officers, and this consideration tended to neutralize the opposition of the Zemindars.

Mode of surmounting those obstacles.

5th. The importance of the Poppy Cultivation, and the advantages to be derived from its extension, were too great and too evident to permit the above difficulties to check it without a full and fair trial; and as gentle measures were deemed best adapted to overcome and banish the prejudices and fears of the natives, conciliation became the order of the day. An advance of cash was made (under the best available security) to each Assamee at the average rate of 4 Rupees per beegah;* and in due time, when he presented the produce of his ground, it was examined and weighed, and he received the balance in full of its value at Rs. 3-10 per seer of 82 tolahs weight: rewards were distributed liberally amongst the most deserving Assamees, in the shape of pieces of fine crimson broad-cloth, two yards in length, and valued about Rs. 8 each, also muslin pugrees to the next in order of merit, these rewards being bestowed as encouragement to careful preparation of the Opium, also to extension of cultivation,—and the following rule was promulgated for testing the quality of the Opium as received from the Assamees for the purpose of fixing its just value,—viz., 100 parts of Opium to be reduced, by exsiccation, to impalpable powder, in which state it was to be again weighed; and if the loss of moisture was equal to 30 parts, the Opium was pronounced of standard quality, and bearing value at Rs. 3-10 per seer of 82 tolahs; and if the loss in 100 parts was less than 30, the price was increased in proportion; but if the loss was greater than 30, the price was reduced,—thus $7\frac{70}{100}$ was assumed as standard, and a scale for regulating the relative value was drawn out by a very nice calculation upon those data which, when fully explained, afforded much satisfaction to the cultivators, as it secured them from arbitrary decision on the part of the Gomashtas.

Rule for testing the consistence and deciding the value of Opium per seer.

The Assamee's return for his labors.

6th. The process of cultivating the Poppy and collecting the Drug, with the various sources from which the Assamee derives remuneration for his labors, will be seen in the Appendix, and Table No. 1 (Appendix) exhibits the amount gained by an industrious cultivator, which shows sufficient encouragement to exertion and extension.

7th. It may (perhaps) be objected, that an average struck from the reported operations of the first years recorded in Table No. 3 (Appendix) would show a different and very discouraging result, but it does not afford a true criterion, as the cultivation was then in its infancy, and the Assamees not thoroughly aware of the best mode of treating the Poppy Plants and extracting the juices; besides which, the figures exhibited in the Table include the Returns given by a large number of unprofitable Assamees, as may be understood by reference to para. 30; therefore Table No. 1 affords a correct and fair test of the value of Poppy Cultivation, without interfering with the culture of various kinds of pulse raised for the food of the family from the same fields after the Poppy Plants have been exhausted of juices and cleared from the ground, and without preventing the Assamee from tilling one or two additional fields with other grain; but to make this subject more clear, a reference to Table No. 2, in the Appendix, will show the proportionate value of the different classes or castes of native farmers as cultivators of the Poppy.

Effect of caste distinctions upon the Poppy Cultivation.

Cash advanced for sinking wells.

8th. In some instances the Ryots made objection that the Poppy required more irrigation than any other crop, and that the wells of the District were already insufficient for the demand upon them for water. They, therefore, requested assistance from the agency of an advance of cash without interest for sinking and building wells, which was granted, on condition of a proportionate increase of Poppy Cultivation, the amount to be repaid by instalments in three successive seasons, an indulgence which was felt to be a great benefit to both Landlords and Ryots, as it improved the value of their lands, and formed an additional provision against future drought in this arid District.

---

* The Agency Beegah was fixed at 27,225 square feet.

9th. Hitherto much difficulty was felt in arranging the Sudder and Mofussil establishments for this District, the scattered state of the fields under cultivation rendering the care and supervision more costly in proportion to the produce than in any other District under the Agency, as per margin. A lengthy correspondence took place upon the subject,—the Deputy Agent having recommended an establishment at Rs. 487 per month, or Rs. 5,844 per annum, for a cultivation of 1,582-13 beegahs, which was disapproved, and the sum of Rs. 252 per month, or Rs. 3,024 per annum, as shown in the above Table, was sanctioned, under strong hopes held out by the Deputy Agent of a large increase in the cultivation, which have been fulfilled as exhibited in the margin, and the establishment has also increased.

Names of Deputy Agencies.	Beegahs under Cultivation.	Annual cost of Establishments.

Cultivation in 1850-51, beegahs 6,807-4-0. Cost of Establishment in 1850-51, Rs. 1,034 per month, or Rs. 12,408 per annum.

10th. In 1829, the Revenue Serishtadar absconded, leaving the Opium accounts in confusion, with a defalcation of Co.'s Rs. 13,129-5-7, which, however, was subsequently recovered by distraint of his property; but this and other abuses and deficiencies, for which it was found impossible, or extremely difficult, to hold the Revenue Amlah legally responsible, because they were not duly entertained as servants of the Opium Department, rendered it necessary to enact some stringent rules for future practice; and in April 1838, Mr. John Trotter drew up a set of Rules for the guidance of the Opium Amlah, which made the Gomashtas responsible for the quality and quantity of the Drug, but at the same time enabling them, with due caution, to protect themselves from loss; and in 1830, at the recommendation of Mr. H. Armstrong, Deputy Agent, the Revenue Tehseeldars were freed from all further special charge of the Poppy Cultivation, as it was found to interfere seriously with their Revenue duties, but they were still required to assist the Gomashtas to the best of their power, while the whole charge and responsibilities were transferred to the Gomashtas, with a slight increase of establishment, due security being taken from them for a full and faithful discharge of the heavy and important trust thus placed in their hands.

Defalcation.

Rules for better Management.

11th. With a view to increase the Opium investment, instructions were issued to the Deputy Agent to encourage the importation of approved Opium from the Onde Territory; but it proved to be a losing speculation; the native deputed to make purchases embezzled a portion of the money entrusted* to him, and the Opium, about 11 maunds, which was eventually received, proved to be of such inferior quality, and so largely adulterated, that the plan was speedily abandoned.

Onde Opium.

12th. In season 1830-31, the large quantity of maunds 14-7-0¾ of Opium was found deficient on account either of fraudulent practice or criminal neglect on the part of the Gomashtas, who were called upon to make good the equivalent to Government, viz., Company's Rupees 2,055-8-9.

1830-31. Large Deficiency.

13th. In 1831, in consequence of the frequent occurrence of irregularities and abuses beforementioned, Mr. Rivaz, Deputy Agent, was called upon by the Agent to state if he could manage, without inconvenience to his Collectorate duties, to give his personal attendance and supervision to the advances for Opium, and to the payment of balances (chooktees) to Assamees; but it was found impracticable, as the Collector had already quite sufficient employment to take his whole attention. The Deputy Collectors were then directed to superintend those operations, or, when they were otherwise engaged, the Commissioner's Assistant was to be appointed to attend, but this was also found to be impracticable. The only alternative was the employment of European Officers separately for the Opium provision, a step which, at that time, the state of the trade did not warrant.

Necessity felt of separate European Supervision.

* Rupees 947.

1831-32. Additional precautions for protection of the Assamees against the Gomashtas. The Benares Agency Code.

14th. In this year several Gomashtas were detected at Ghazeepore in practising frauds upon the illiterate cultivators, upon which the Agent, Mr. J. Trotter, issued new clauses in the agreements (Hath Chittas) for their protection; these clauses formed the nucleus of a comprehensive and excellent body of rules, afterwards compiled by that gentleman under the title of the "Benares Opium Agency Code," providing for every possible contingency that could affect the Opium Department.

Alleged unwillingness of Assamees to cultivate the Poppy.

15th. In July 1832, Mr. J. T. Rivaz stated that the Ryots were not inclined, of their own free-will, to enter into Poppy Cultivation, and similar opinions had been previously placed on record respectively by Mr. Lind and by Mr. Armstrong, Deputy Agents, who reported a general dislike to the cultivation of the Poppy, which they attributed partly to the small profit accruing therefrom, through ignorance in treating the Plants and mismanagement of the Drug; but when the matter was closely inquired into, at the desire of the Board of Customs, Salt and Opium, it was found that, when the Ryots could be assured of full protection from the oppressions and fraudulent exactions of the Native Amlah, they were not backward in taking engagements for the Poppy. For a satisfactory elucidation of this matter, *vide* para. 25.

Unwillingness not proved.

1832. Defalcations through Mismanagement of the Amlah.

16th. In 1832, Futtehpore gave 211-28-14 maunds of Opium, which was not only declared at Ghazeepore to be of disgraceful quality, but also bearing deduction for deficiency to the extent of 14-31-6¾ maunds, for which the sum of F. Rs. 2,249-0-5½ was to be recovered from the Gomashtas, to whose neglect or mismanagement this unpleasant result was clearly attributable.

Increase in the price paid to Assamees recommended, and wherefore.

17th. Mr. J. T. Rivaz, Deputy Agent, in July 1832, proposed an increase in the price to Rs. 4-8 per seer, and more stringent supervision of the Gomashtas' conduct; the higher rate of price to Assamees beyond that of other Deputy Agencies being recommended, because the depth from the surface of the land to the water in the wells was much greater here, being from 50 feet to 100 feet, (average 75,) also that the land was more arid, and the wells less in number than in other Districts, therefore causing more trouble in irrigation and general labor. Upon this recommendation, payment to cultivators was raised from Rs. 3-10 per seer to Rs. 4-0, instead of Rs. 4-8, and stricter vigilance of Gomashtas was enjoined.

1836. Appointment of Sub-Deputy Agents, and Collectors relieved from special charge.

18th. From the establishment of the Opium Department to this date, the supervision and correspondence had been imposed upon the Collectors, as Deputy* Opium Agents; but the results of the arrangement were far from satisfactory. The business of the Revenue Department was in itself sufficient to engage the whole time of any of those officers; consequently, the duties of the Opium Provision were indifferently attended to; accounts and correspondence frequently in arrears; malversation and frauds incessantly occurring amongst the native officers, with heavy losses to Government. In the mean time, and notwithstanding all the difficulties to be contended with, those gentlemen had gradually increased the cultivation to such an extent, that its importance, and the large amount of Revenue accruing from it, pointed out the propriety and necessity of employing separate European supervision, and it was, therefore, resolved, that Uncovenanted Europeans should be appointed as Sub-Deputy Agents, whose labor and attention should be confined solely to the Poppy Cultivation and the provision of the Drug, but subordinate to the Collectors, who still retained the title of Deputy Agents, (without salary†) and were to guide and instruct the Sub-Deputy Agents when required, also in a general manner to guard the interests of Government, should the conduct of the Sub-Deputy Agent afford cause for interference.

19th. The first appointed Sub-Deputy Agent, (Mr. J. Galloway,) was but a short time installed in his office when he became aware of the source of the dislike hitherto exhibited by the Assamees to the Poppy Cultivation, in the oppressive and fraudulent conduct of the Gomashtas, who had established a systematic plan of defrauding them in the matter of Opium payments (chooktees); and his first attempt at reforming the system was met by counter-charges against himself. The Gomashtas, assuming the air

* Deputy Agent's salary was Rs. 200 per month, with a small commission upon increase.

† Or Commission.

of injured men, accused him of neglect and inattention, but he had taken his ground too firmly for them, and finally effected a great change for the better. The Assamees speedily felt the benefit of his zeal for their interests, and showed their confidence in his protection by a further extension of the cultivation. A reference to Table No. 3, in the Appendix, will show that an increase of 200 maunds of Opium was obtained in the ensuing year (1837-38.)

Improvement.

20th. In this year, as a further stimulus to exertion, a premium of 10 annas per seer on the excess produce of each Assamee over the preceding season was sanctioned for all Opium presented of standard consistence and free from Pussewah, (Opium sweat, supposed to be produced by the dews scraped with the Opium from the capsules,) a black, shining, resinous-looking substance, not unlike thin tar, which exudes from the Opium, if not carefully separated during collection, and is considered injurious, as it spoils the marketable appearance of the Drug.

10 annas' premium.

Pussewah to be separated.

21st. From this period up to the year 1840, the cultivation and produce made no advance, which may be attributed to the inability of the Sub-Deputy Agent, through ill-health, to continue the active supervision with which he had commenced his career. His office Amlah and Gomashtas took full advantage of the circumstance to resume their evil practices; the accounts fell into confusion, and the Agency into a most lamentable state of disorder; the Sub-Deputy Agent died suddenly, and another active and intelligent officer was deputed to inquire into the abuses and restore order, which, after some delay and much labor, was effected.

22nd. The memorable crisis in the Opium Trade, which took place in this year in China, made it doubtful if the cultivation could be continued as heretofore, therefore measures of caution were adopted; the price to be paid to Assamees was reduced from Rs. 4 per seer to Rs. 3-12, the 10 anna premia discontinued, and Sub-Deputies were directed to check the further extension of the cultivation, but to improve the productiveness, *i. e.*, to get rid of unproductive lands and unproductive Assamees.

1840.

Crisis in China and its effect on the Poppy Cultivation.

Prices reduced, and further extension of cultivation forbidden.

23rd. In this year the seer weight was altered from 82 tolah to 80 tolah, and the price of the Opium proportionately altered to Rs. 3-11 per seer, Rs. 3-10-6 at 80 tolahs being equivalent to Rs. 3-12 at 82 tolahs, the Government giving the fractional difference (6 pie) in favor of the Assamees, and in the ensuing year the rate of Rs. 3-12 was again restored, and the restriction upon extension of the cultivation withdrawn, but a second time partially laid on in 1848.

1841.

Alteration of the seer weight, a slight advantage to the Assamees.

24th. It having been proposed to try as an experiment if a change of seed from the old established Kotees of the Ghazeepore Division to the Western Sub-Agencies would cause an improvement in the Drug, it was resolved, in 1844, to substitute a supply of Poppy Seed (called Bugowtee) in lieu of pugrees, which was duly carried into effect, but the change was not relished by the Assamees of Futtehpore, who, almost without exception, state that the Bugowtee Seed does not produce any improvement in the juices, but that a large increase of red-flowered plants has been the result, and as the red plants give little or no juice, the change would thus appear to have been injurious; however, the writer's observation leads him to think that no injury has resulted, and that the red-flowered plants have increased (but only in a few fields) through the neglect of the Assamees, who do not extirpate them in proper time to prevent the seed being mixed up with that of the white-flowered and productive plants, and that the Assamees are merely discontented at the discontinuance of the pugree rewards, and do not consider the Poppy Seed which they get in lieu to be of equal value; and the writer also states, that he has had part of a field sown with Bugowtee and part with Home Seed, and on subsequently examining and comparing the capsules in juxta-position, and testing their relative capacities of productiveness, he has not seen anything that could authorize him to decide that the Bugowtee Seed is superior. Upon instituting more extensive and more close inquiries into this subject, the Sub-Deputy Agent received many contradictory and clashing replies from Assamees, some of whom declared that the Bugowtee Seed gave very little juice, and that on this account they *never would* sow them; others stated that the Bugowtee Seed first supplied was excellent, but that subsequently the supplies were

Change of seed recommended, new seed distributed gratis, and pugree rewards withdrawn.

inferior to the Home Seed of this Division ; while others (these, however, are of the smaller number,) consider the Bugowtee superior to their own ; the Sub-Deputy, therefore, thinks it very probable that sufficient care has not been bestowed upon the selection of the seed at Ghazeepore ; that seeds of mixed qualities have been forwarded, and that some portions of the latter District may give better seed than other places, and that if this can be properly ascertained, the results may be more satisfactory to all parties, and profitable to the Agency.

1844. Increase of cultivation.

25th. A reference to Table No. 3, in the Appendix, will show that a considerable increase in cultivation and produce was obtained this year, which was in part owing to the abolition in 1840-41 of the Allahabad Agency, and the transfer of one of its Kotees (Kurrah) to the Futtehpore Agency, but more especially owing to the attentive supervision of the Sub-Deputy Agent in protecting the Assamees from the oppression of the Gomashtas, to which they had before been exposed ; and the sudden improvement observed in the Returns exhibited in the same Table from season 1835-36, (the year in which a Sub-Deputy Agent was first appointed), proves the wisdom of Government in engaging the undivided services of Uncovenanted Europeans for the charge of the Opium provision. The Assamees being delivered from apprehension, and assured of obtaining their just dues, have afforded a triumphant refutation of the opinions expressed in the early days of the Poppy Cultivation by several Deputy Agents,* *i. e.*, that the people were decidedly averse to the Poppy Cultivation ; for it will be perceived, that although they had been for several seasons receiving more than Rs. 4 per seer for all approved Opium,† and were then subjected to a reduced sum of Rs. 3-12, without the premium of 10 annas, yet there was only a slight falling off in the cultivation amounting to 420 beegahs ; but in the next ensuing season, it received an increase of 900 beegahs, and thenceforward continued to improve, until nearly the whole of the available Assamees in the District have come under the Agency.

Advantages of European superintendence.

26th. Defalcations in cash, confusion of accounts, and troublesome law-suits arising therefrom, were formerly so common, that it was rare to pass a season without some such occurrence ; but now such things are mere matters of unpleasant recollection, the duties of the Sub-Deputy Agent at present being to exercise a steady control so as to prevent a return to the above-mentioned practices.

Heavy Advances.

27th. The anxiety to increase the provision in the first days of the Agency induced the Deputy Agents to give very large advances of cash as an encouragement, which assuredly had the desired effect of swelling the number of the cultivators, but all were not equally industrious, (See Table No. 3, Appendix.) The Opium presented by many was so far less in value than the amount of advances, that instead of receiving a balance, they were heavily indebted to the Agency, and thus arose a most troublesome item of Account, under the head of "Outstanding Balances," which in one season amounted to Rs. 5,000, and which the Deputy Agent declared impossible to be recovered from the Assamees, as they had no property for distraint, and their whole crops had been destroyed by hail-storms.

Productive of evil consequences.

Outstanding Balances.

How reduced.

28th. To this subject the careful attention of the present Sub-Deputy Agent was particularly directed by the present energetic Agent, Mr. T. P. Marten, who pointed out precaution and prevention as the best means of remedy, which was to be attained by weeding out the unprofitable Assamees, and reducing the amount of advances to the lowest possible rate that the productive Assamees could be prevailed upon to accept, which instructions have been faithfully carried into practice : with the results so judiciously anticipated by the Agent, a large number of unproductive Assamees has been got rid of, and the advances brought down to so low a rate as to render the chance of Outstanding Balances a matter of remote contingency ; and here may be included as a still further improvement, effected by exclusive European supervision, *i. e.*, a great diminution of adulteration.

Future prospects of the Futtehpore Sub-Agency.

29th. The highest amount of produce, exhibited in Table No. 3 of the Appendix, is damdata maunds 729, to which it had advanced, with a steady though a slow progress, the occasional deviations

* *Vide* para. 15.

† Stipulated price Rs. 4-0 per seer, and 10 annas per seer premium.

shown in the above Table being fairly attributable to hail-storms, which also affected the general qualities of the Drug ; but with these exceptions the Futtehpore Opium received uniform approval at Ghazeepore, and with reference to the enclosed position of this District between the Rivers Ganges and Jumna, and bounded on its N. E. and S. W. extremities by Zillahs Allahabad and Cawnpore respectively, beyond which boundaries extension has been hitherto strictly prohibited,—the above figure would appear to be the maximum attainable ; but the writer of this report entertains the opinion that 800 maunds may be obtained by a continuance of the present management.

Average rate of produce at Futtehpore low, and why

30th. The low average rate of produce per beegah, exhibited in Table No. 3, (Appendix) is owing to the large number of the "Koormee" caste located in this District, chiefly in the Tuppehjar and Futtehpore Pergunnahs, who undertake the Poppy Cultivation, but perform their engagements in a very unsatisfactory manner ; few of them ever presenting more than two seers per beegah, and the greater number of them less than that amount. A considerable number, with some of the "Aheer" and "Lodh" castes, were heretofore in the habit of taking advances (say 4 to 6 Rupees per beegah) for which they would bring to the scales perhaps two or three chittacks in lumps so hard and dry as to be useless for manufacturing purposes, although pure opium ; and in many cases these Assamees have come in without even one chittack, but merely to refund the amount of cash which they had taken as advances, and would readily present themselves again in due season for a renewal of advances,—thus showing that the advance of cash without interest is a very powerful stimulus to the cultivation ; but it was also found that Gomashtas frequently made such advances while they well knew that no Opium would be given in return, and solely for the sake of trading on the Agency cash by taking a considerable discount for their own special profit upon all moneys so advanced, and charging the same in Account as "Advances for Opium ;" and as it not unfrequently happened that many who had received such advances were unable to repay at the close of the season, the Gomashtas evaded the impending embarrassment by reporting the amount as "Outstanding Balances," and had it subsequently written off "recovered," by fraudulently transferring it to Account of "Advances for Opium" for the ensuing season, and thus the fraud was perpetuated from year to year, still increasing in amount, until some accident called particular inquiry into the Gomashta's Accounts, and then his unfortunate sureties paid the penalty of his villainy ; but it has been the business of the present Sub-Deputy Agent to improve this state of things, by taking care that all who receive advances must show a corresponding return for the benefit bestowed by the use of the Government money : for if this Officer perform his duty properly, such disgraceful dealings cannot be carried on ; nor does it involve any great amount of labor. A careful attention to the advances and weighments checks the Gomashtas, and the survey checks the Assamees, who must show cultivated fields for their written engagements, and as visiting the defaulters and backsliders with personal chastisement is not permitted, the next and most obvious course of proceeding would be to refuse them further advances ; but here the Gomashtas raise an objection that if one family were cast off, their next of kin would refuse engagements ; that two families would lead a village, and one village would be followed by more, and thus we should lose a considerable amount of cultivation ; therefore, the alternative remained of reducing the rate of advances in proportion to the produce (see the 6th column in Table No. 2, Appendix), which is now the rule in this Division, many of these classes receiving only one Rupee per beegah in advance, and thus we retain the Assamees and escape the casualty of balances ; but the number of Koormees being so great, (much more than in any other Poppy District,) their small produce, when taken into account with that of the first and second class Assamees, reduces the average to a lower rate than (perhaps) that of any other Division ; but as if to compensate for this comparatively low average produce, the Futtehpore Opium is uniformly more free from Pussewah (alluded to in para. 20) than that of any other Division, except perhaps one or two Kotees of Cawnpore, and it is only after a severe visitation of stormy and rainy weather that the presence of this substance is particularly apparent in the Futtehpore Opium.

Further reduction in price directed for 1851-52, the effect to be tested by time.

31st. Orders have now been issued by the Board of Customs, Salt and Opium, that the restrictions upon the extension of the cultivation directed in the year 1848, are to be considered finally cancelled from the close of the current season ; but that from the same period (*i. e.*, the commencement of season 1851-52) the price to be paid to the cultivators, in all the Sub-Agencies of Behar and Benares, shall be

reduced to the uniform rate of Rupees 3-8 per seer, an order which, to some persons, may seem at first sight pregnant with disastrous consequences to the general interests of the Agencies, and loss of Revenue to Government; but the writer is of opinion that such will not be the case, for it has already been seen that the reduction from Rupees 3-12 to 3-10 in the Eastern Agencies, and from Rupees 4-0 to 3-12 in the Western, also the abolition of the 10 anna premia and discontinuance of pugree rewards, have not lowered the amount of the provision, but, on the contrary, it has run up to so large an extent as to be at times in excess of the market demand, and to threaten to become embarrassing to Government. The writer's observation tells him that the cultivation of the Poppy at Rupees 3-8 per seer will still be more satisfactory to the Assamees than Grain, Sugar-cane, or Tobacco, because they can always calculate with tolerable accuracy upon the amount of their Returns for the Poppy, whereas the fluctuations of the native markets (bazars) keep them in a state of anxious incertitude till the day of sale, and then payment is not in all cases so prompt and safe as at the Opium Agencies, besides which, the advance of cash without interest is of no small importance, for the profits of the native money-lenders (shroffs and bunyeas) should not be called interest, but usury of the most grinding description; therefore, although a reduction of two annas per seer in some Divisions and four annas in others (Futtehpore and Cawnpore) may and must be so unpalatable to the Assamees as to cause a certain falling off in the cultivation for one season, the writer thinks it no venture to say, that it will be recovered in the following year, and that a further increase will be obtained in future seasons.

T. W. SEYERS,
Sub-Deputy Opium Agent.

FUTTEHPORE, SUB-DEPUTY OPIUM AGENCY,
The 3rd March 1851.

APPENDIX.

SKETCH OF THE MODE

OF

CULTIVATING THE POPPY,

EXTRACTING THE OPIUM, AND PREPARING IT FOR EXPORTATION.

Sowing.

In the month of October in each year, the ground is prepared by ploughing and harrowing (or rather levelling); and when the weather is judged to be cool, generally in the beginning of November, the seed is sown, at the rate of one seer, or perhaps a little over a seer, to every beegah,* and the sowings are (or should be) completed before the 15th of December.

Dressing and Irrigation.

2nd. After sowing a field, the Assamees rake up a part of the surface into small ridges about three inches in height, dividing the whole into small plots, each in extent about two square yards: into these plots water is admitted alternately until the whole field is well soaked, and when after two or three days the surface has become dry and hardened into cakes by the action of the water and the sun, the Assamees break it up by hand-digging, by means of small iron instruments (koorpees) with a blade about an inch or more in breadth and four inches (more or less) in length, thus affording air and freedom for the seed to germinate, which takes place within a period of from six to ten days after being sown; but it frequently happens that the seed first sown perishes, if the weather should become warm,—then a second sowing takes place, and it happens in some seasons that a third sowing becomes necessary on account of continued drought.

Watering and weeding.

3rd. Watering is a most important process, and is effected in the manner above described†; it should be repeated once in every ten or twelve days from the time of sowing, unless a fall of rain take place, and after every irrigation, the koorpee should again be used to break up the surface and extirpate weeds, also redundant Poppy Plants.

Flower Leaves.

4th. When the plants are approaching maturity, and the capsules become strong enough to live without further protection from the flower cups which surround them, and the petals begin to drop off, women and children pluck them gently and collect them for making what are called the flower leaves: this is done by placing a handful of clean petals on an earthen plate gently heated over a slow fire, spreading them out on the plate, and pressing them gently and evenly with a piece of cloth until they adhere to each other by the action of the heat upon their own juices, when they form thin cakes, not unlike soiled yellow or brownish paper. In this state they are preserved and delivered to the Agency Officers, who pay for them by weight according to quality, *vide* margin. The first quality should be of a pale yellow color, even texture, as large as an ordinary dinner plate, and not thicker than common brown paper; the second quality is of a dirty yellow color, less even in surface and thicker in substance than the first quality; and the third quality is still darker colored and thicker, and commonly of small size, owing to ignorance or indolence in the maker.

1st quality, 4 seers per Rupee.
2nd ditto, 6 ditto ditto.
3rd ditto, 8 ditto ditto.

* The Opium Agency Beegah contains 27,225 square feet, or 3,025 square yards. † Para. 2.

Gathering the Opium.

5th. When the Assamees observe that some of the capsules are quite ripe for puncturing, which is known by a peculiar feeling of hardness and elasticity when pressed by the hand, they make an incision in each, from the star-like crown on the top down to where the stalk and capsule meet. The incision is made with a lancet (nusthur), made of two flat iron blades tied together with a very small space intervening, so that by each puncture two longitudinal incisions are made parallel to each other, and from these the juice flows out, of a milky appearance, and is left adhering to the capsules until the following morning, during which time it acquires a curdy consistence and pinkish color, when (after sunrise) the Assamees, with their families, attend and scrape it off with rude iron spoons * and collect it in earthen vessels. The remaining capsules are treated in a similar manner as they become ripe.

Gathering the Seeds.

6th. About a week after the capsules have been exhausted of their juices, they are plucked and the seeds extracted, some of which are laid by for the ensuing year's provision, and the surplus is sold to the oil-makers at the rate of Rs. 1-8 per maund, more or less, according to variation of the market.

Poppy Trash for packing.

7th. When the plant stalks are perfectly dry, they are cut down and packed in bundles for sale at the Agent's Sudder Godowns, where they are stored in immense heaps and become broken up into coarse powder, which is used for packing the Opium cakes, by filling up the spaces between them in the chests. The Eastern Divisions supply a sufficiency, therefore no Poppy Trash is required from the Western Agencies, Futtehpore and Cawnpore, as the carriage would exceed the first cost.

Preparation.

8th. This is *the most* important part of the business, and simply consists in turning up the Drug once in every ten or fifteen days from the day of collection, and draining it of all remains of dew, (see "Pussewah," para. 20 of Synopsis) which may have been scraped with it from the capsules.

Weighment.

9th. If the foregoing process has been properly attended to, the Opium assumes a rich chestnut color and a firm consistence, and is then presented for weighment at the Agency Godowns, where its color, aroma, consistence, and general appearance are carefully tested by expert examiners who (if no attempt at adulteration appear) decide by the foregoing tests upon the amount of its value.—The following extract from Dr. O'Shaughnessy's Manual of Chemistry, may perhaps be appropriately quoted here, *viz.*,—"Opium of the first class is of a fine chestnut color, aromatic smell, and dense consistence. It is "moderately ductile; and, when the mass is torn, breaks with a deeply notched fracture, with sharp "needle-like fibres, translucent and ruby-red at the edges."

Despatch to Sudder.

10th. When the Opium is received and Assamees' accounts adjusted and paid up, the Sub-Deputy Agent despatches the Opium in earthen jars, containing one maund each, by instalments, according to the means of carriage available, to the Agent's Sudder Godowns at Ghazeepore, where it is again weighed and examined and finally manufactured into cakes (balls) for the Calcutta Market.

T. W. SEYERS,
Sub-Deputy Opium Agent.

FUTTEHPORE, SUB-DEPUTY OPIUM AGENCY,
The 3rd March 1851.

* Sithoons.

TABLE No. 1.

Statement of Return gained by an Industrious Cultivator of the Poppy.

Extent of Land cultivated by one Assamee with a family of seven persons including children, possessing two Bullocks.	Opium produce at 8 Seers per Beegah.	Price at Rs. 3-10 per Seer.	13 Seers of Flower Leaves, 1st quality, at 4 Seers per Rupee.	Realized by sale of surplus Poppy Seed, at R. 1-8 per maund.	Total.	Deduct Rent at Rs. 6 per Beegah.	Balance in favor of Assamees.
		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
3 Beegahs,	24 Seers,	87	3	9	99	18	81

T. W. SEYERS,
Sub-Deputy Opium Agent.

FUTTEHPORE,
SUB-DEPUTY OPIUM AGENCY,
the 3rd March 1851.

TABLE No. 2.

Statement showing the relative value of Caste as affecting the Cultivation of the Poppy in the Sub-Deputy Agency of Futtehpore.

Number.	Name of Caste.	Rate of Land Rent per Beegah.	Quality and Description of Land usually taken by each Caste.	Former Rate of Advances per Beegah.	Present Rate of Advances per Beegah.	Proportionate Produce of each Caste per Beegah.	Remarks.
		Rs. Rs.		Rs. Rs.	Rs.		
1	*Mooraee, 1st Class, ...	From 4 to 6	1st Quality, (Mutteear,)	16 to 20	8	10 seers.	The distinction of 1st and 2nd Class Mooraees applies merely to relative industry.
2	Mooraee, 2nd Class, ...	Ditto ditto,	Ditto ditto, ...	12 to 16	6	8 seers.	There are many notable exceptions to this scale, some Koormees give as much Opium as the best Mooraees, but it is remarkable that these exceptions are only seen in the Kurrah and Hutgaon Kootee lands, and are not to be met amongst those of the Futtehpore and Bindkee Pergunnahs.
3	Kachee, ...	Ditto ditto,	1st and 2nd (or Doomut,)	Ditto, ...	5	6 seers,	
4	Aheer, ...	2 to 4 ...	Chiefly 2nd quality,...	8 to 10	4	4 seers.	In addition to these castes we have a few of every other caste, such as Brahmins, Mahomedans, Rajpoots, Shepherds, Sweepers, &c. &c., but if taken together they are inconsiderable in number and value compared to the castes named in this Statement.
5	Lodé, ...	1-8 to 4 ...	Ditto ditto, ...	Ditto, ...	3	2-8	
6	Koormee, ...	8 as. to 1-8,	2nd and 3rd (or Bulwah,) ...	Ditto, ...	1	1 seer.	

* *N. B.* There are none of the Quirie caste in this District except two families, who came in 1826 from Ghazeepore to instruct the Assamees of Futtehpore, and have been detained by the encouragement of Extra Allowances (Commission); but the Mooraees are in all matters of caste similar to them, and are quite as industrious and profitable, the *only* difference is that they do not intermarry.

T. W. SEYERS,
Sub-Deputy Opium Agent.

FUTTEHPORE,
SUB-DEPUTY OPIUM AGENCY,
the 3rd March 1851.

TABLE No. 3.

Statement of the Annual Cultivation and Produce of the Futtehpore Opium Agency, from 1826-27 *to* 1849-50.

Seasons.	Cultivation.		Produce.			Average per Beegah of 27,225 square feet.		Outstanding Balances.			Rate per Seer.	Collectors and Ex-Officio Deputy Agents.	Sub-Deputy Agents.	Remarks.
	Beegah.	B.	Mds.	S.	Ch.	Seers.	Ch.	Rs.	A.	P.				
1826-27,	2,777	4½	97	25	6½	1	6	.....	..	...	3 Rs.	T. Lind, Esq. ...		During these years, there is no report nor record of outstanding balances, nevertheless they are known to have been very great in amount, but the Gomashtas concealed them by giving advances and chooktees at one time, thus mixing up the transactions of successive seasons as explained in para. 30 of annexed Synopsis.
1827-28,	2,327	1	148	38	2½	2	9	.....	...	...	3-10	Ditto.

It will be observed that column 1, which shows the cultivated area, has been left blank under certain articles of produce, such as "Urhur," "Til," and others. The reason of this is that these grains are almost invariably sown along with some other and more valuable grain, under the heading of which is entered the total area of the land under crop. It would not have been easy in such cases to have made a separate estimate of the quantity of land occupied by each description of crop. I have thought it best, therefore, in cases where two or more grains are cultivated in the same field, to exhibit the whole of the cultivated area under the principal product of such field, estimating the produce of the inferior grains from the best sources that were available to me.

C. W. KINLOCH,

Collector and Magistrate.

Futtehpore Collectorship,
July 1851.

PLAN AND ELEVATION

OF THE

FUTTEHPORE DISTRICT JAIL.

APPENDIX No. XII.

(VIDE PARA. 138.)

DR. WARNEFORD'S

MEDICAL STATISTICS

OF

FUTTEHPORE.

MEDICAL HISTORY OF THE CIVIL STATION OF FUTTEHPORE,

(FOR THE YEAR 1850.)

CLIMATE.—The Station of Futtehpore is situated in Latitude 25° 55′ 53″ North, and 80° 48′ 25″ East.

The Climate appears to be thought cooler than that of either Allahabad or Cawnpore; the high vegetation and surrounding tanks of water no doubt render this highly probable.

Formerly this Station was situated in the midst of a large marsh, surrounded by a stagnant atmosphere, pregnant with a congestive type of fever peculiar to the locality. I have no doubt but that in some measure from the fevers being more usually of the remittent form amongst the native population, that some dread arose from this circumstance, but I believe it would be difficult to prove that at any time a disease of a specific nature attacked the European residents.

Formerly, when there was no drainage to the West of the Station, on the ground usually denoted as the Jheel, much evil resulted from the stagnant water and decomposed vegetable matter upon this low land. Now, however, from the formation of tanks and the earth obtained in their excavation being applied to the raising of the soil,—parts of it planted and laid out in vegetable beds for the supply of the Jail,—a most beneficial change has been effected.

The water is said to be good, and those springs which I have seen myself quite corroborate the statement.

JAIL HOSPITAL.—For the purpose of showing satisfactorily the sanatory condition of the Jail, I have drawn out and appended two Tables, A and B, each embracing a period of four years,—my own charge commencing with the date of Table B. Upon examining these, it will be found that the admissions and deaths during the last five years have very much decreased,—the Table A showing a total of 72 deaths, Table B a total of only 38. Much has been done to account for the production of this favorable report of matters by—

1*st*,—Strict discipline of the Jail subordinates, a scrutiny of their conduct, thereby allowing them no opportunity of exerting oppression or deriving advantage in the furnishing of inferior grain.

2*nd*,—A generous diet, with a proper proportion of fire-wood, warm clothing, and directions given that in the hot months the blankets be worn by all prisoners on out-door work as a protection against the sun.

3*rd*,—Very great attention is paid to the amount of labor they are capable of performing; those who are weakly are not allowed to grind or do any hard work, but are placed in a convalescent gang, which is itself composed of convalescent prisoners from Hospital, the aged and infirm, and those who have not the entire use of all their limbs. The men in this gang perform the garden-work of the prison, or such other works of a light kind as may be on hand.

4*th*,—In the cold season I have always considered it highly necessary that the sick should be preserved from the chilliness experienced in the early morning and evening, and therefore, with this view, have directed a fire to be lighted at those times, generally commencing from about the end of November, and the benefits derived from it are very great. Cases of dysentery and diarrhœa, susceptible as we all know of atmospheric changes, rapidly strengthen, and the aged, who are peculiarly predisposed to diarrhœa in the cold weather, are, I am satisfied, preserved by this means. This convalescent gang of prisoners does not sally forth to work in the cold weather till the sun has reached some little height. In the annexed plan, C, are given the dimensions of the Hospital, and the number of persons which it would be capable of containing, at the measurement of 400 cubic feet per man,—the amount of space allotted in the Jail wards, almost too small : the sick prisoners would require double this, but as there are never beyond a few admissions, no precautions have been rendered necessary in reference to over-crowding. The building is well ventilated by openings in its roof and sides ; if to the venetian doors of the side rooms were added close inner doors, much comfort would be derived to the patients, and a complete protection from the hot winds and dust-storms.

Hospital Diet.—The Diet consists of 4 rates, the 2 highest being given to those having discharging sores, indolent ulcerous wounds, &c., &c.

The quantum of fire-wood is not by any means too much, and certainly not bearing the appearance of excess in the remotest degree : the allowance of wood is less I believe in some Hospitals, but I am at a loss to know how food requisite for diseases of all kinds can be properly cooked with a smaller allowance than that observed here. Many patients who are sick and weakly desire to eat their food at separate intervals, this would be out of their power to do were the quantum less.

Scale of Diet.

	Daily Allowance.					Vegetables, twice a Week, *in lieu of*	
	Ottah.	Doll.	Salt.	Pepper.	Wood.		
	Chittacks.	Chittacks.	Grains.	Grains.	Chittacks.	Doll.	Ghee, once a week, Tobacco, do. do.
Hospital Diet, 1st.,	10	2	67½ grains,	36 grains,	10	4 Chittacks,	4-anna piece weight.
Ditto, ... 2nd.,	8	2	ditto,	ditto,	10	ditto,	ditto.
Ditto, ... 3rd.,	6	2	ditto,	ditto,	10	ditto,	ditto.
Ditto, ... 4th.,	4	2	ditto,	ditto,	10	ditto,	ditto.

Jail Diet, Clothing.—In the following Table the articles Food and Clothing are given in the proportion and quantity therein specified :—

	Daily Allowance.					Vegetables, twice a Week, *in lieu of*	
	Ottah.	Doll.	Salt.	Pepper.	Wood.		
	Chittacks.	Chittacks.	Grains.	Grains.	Chittacks.	Doll.	Ghee, once a week, Tobacco, do. do.
With labor, ...	14	2	67½ grains,	36 grains,	12	4 Chittacks,	4-anna piece weight.
Without labor,...	10	2	ditto,	ditto,	12	ditto,	ditto.
Female Prisoners,	10	2	ditto,	ditto,	12	ditto,	ditto.
Under Trial, ...	10	2	ditto,	ditto,	12	ditto,	ditto.

The Clothing consists of the following :

Each prisoner is allowed 1 blanket, 1 pair dhotee, 1 mirzie, 1 ungocha, and 1 bedding of tatputtee per year.

	Strength of Prisoners.	Liberation of Prisoners in Hospital.	Admission into Hospital.	Cured in Hospital.	Deaths in Hospital.

November, ...	467	.....	7	5	1	
December, ...	502	.....	8	11	.....	
Total, ...	5,998	.....	140	134	5	

The operations I have had this year have been few, and bear but little interest. In the amputation of the right arm of a boy, the fore-arm had been fractured by the fall of a branch, and the arm was allowed to mortify to beyond the elbow-joint, immediately above which there was a line of demarcation, and about the centre of the humerus the living parts had degenerated into a large malignant discharging tumour ; the glands in the axilla were not in the least affected, and therefore it was not necessary, though exceedingly close upon the shoulder-joint to remove the limb from that cavity ; the boy has since done very well.

In a second amputation of the arm, high up, the patient was fifty years old, and previously to my seeing him, had bled profusely from wounds in both arms; the administration of chloroform was most successful. A case of complete fistula, of 4 years' standing, I operated on a few days ago ; the communication with the rectum was situated rather high above the sphincter, and therefore I met with a little difficulty in approximating the finger and point of the bistoury, the condensed gristly state of the parts forbidding a sweeping and rapid use of the knife.

I take this opportunity of remarking, that I believe if the sanction of Government was obtained for the maintenance of a Dispensary, a great number would seek admission. Many apply for Medicines and advice, but dislike the idea of entering the hospital of the Jail.

	2,735	13	8							
Of 30th October 1837,... ...	18	5	6				This is a balance on account of drought of season due from a village in the Cawnpore District, but since transferred to this. It is an irrecoverable balance inserted in the accounts of this office as per Accountant's orders, and will be struck off the accounts when sanctioned. It appears from the records of this office, that in 1247 Fuslee, 17 villages were transferred from the Cawnpore District to Futtehpore, and from these villages the sum of Co.'s Rs. 1,609-2, on account of balance for the year 1245 Fuslee, was due as follows:—from mouzah Puchowra Rs. 339-8, from Sojawulpore Rs. 920-10, and Manapore Rs. 249; the sum of Rs. 920-10, due from mouzah Sojawulpore, was remitted as per Accountant's letter No. 1801, dated 22nd July 1850, and the amount of Rs. 588-8, due from the other two abovementioned mouzahs, is considered to be irrecoverable: these items will also be struck off the accounts of this office as soon as sanction is received. Twenty-six villages were transferred from this district to Cawnpore, of these 26 villages Rs. 240 are due from mouzah Issuneea for 1245 and 1246 Fuslee, which sum ought to appear in the accounts of the District of Cawnpore.

FUTTEHPORE COLLECTORSHIP,
December 1851.

at Kalianpore, in Zillah Futtehpore, from 15th November 1850 to 16th November 1851.

Months taken.						Total.	Monthly Average.	Remarks.
From 15th May to 16th June 1851.	From 15th June to 16th July 1851.	From 15th July to 16th August 1851.	From 15th August to 15th September 1851.	From 16th September to 16th October 1851.	From 16th October to 15th November 1851.			
762	1,107	575	737	935	1,092	16,691	1,382·6	The statement does not include any Regiments or Detachments of Troops that passed along the road during the period embraced in the return, neither does it include camp followers or regimental baggage. If the Register prepared by Mr. Montgomery in 1846-47 be correct, the traffic, &c., must have very greatly decreased within the last 3 years.
1,128	861	497	609	603	1,129	7,336	611·3	
288	329	192	181	169	215	3,597	299·7	
419	265	389	523	558	565	3,691	307·6	
89	38	21	29	346	563	3,983	331·9	
64	28	16	31	221	321	1,782	148·5	
97	289	102	73	367	144	2,408	200·6	
994	981	661	1,609	1,885	1,705	13,323	1,110·2	
8	16	11	16	21	62	251	20·9	
24	48	16	5	26	42	266	22·1	
4,073	3,962	2,460	3,713	5,121	5,838	53,228	4,435·0	
73	270	233	123	307	641	3,071	255·9	A large portion of the traffic from the Westward is doubtless absorbed in each year in the City of Cawnpore, and a certain portion of it proceeds Southward, in the direction of Bundelcund, before it arrives within the limits of the Futtehpore zillah, but these causes are wholly insufficient to explain the great difference between the statements of the two Districts.

APPENDIX No. XIX.

(VIDE PARA. 186.)

REPORT

ON THE

NATIVE SCHOOLS

IN THE

FUTTEHPORE DISTRICT, NORTH-WEST PROVINCES,

By W. Muir, Esq., C. S.

TABLE OF CONTENTS.

Para. 1. Reports completion of the investigation and submission of the School statements.
„ 2. Manner and progress of the inquiry.
„ 3. What Pergunnahs were personally visited and tested.
„ 4. General result.
„ 5. Abstract of the castes of the Scholars.
„ 6. Distribution of the Schools.
„ 7. Number of Schoolmasters, and their receipts.
„ 8. Mr. Adam's arrangement adopted in the following Report.
„ 9. Hindee Schools—their number and distribution.
„ 10. Teachers—their castes.
„ 11. Mode in which they are remunerated.
„ 12. Rate of remuneration in each Pergunnah.
„ 13. Abilities of Teachers.
„ 14. The Scholars—their ages at entrance, at inspection, and at leaving.
„ 15. A detail of their castes.
„ 16. Miscellaneous castes.
„ 17. Course of study pursued ; Classification of the Schools.
„ 18. Detail of the subjects studied.
„ 19. Boards used to write upon.
„ 20. Places employed as School-houses.
„ 21. Remarkable School in Kudjwah.
„ 22. Hindee taught in three Sanscrit Schools.
„ 23. Further remarks below.
„ 24. Persian Schools—their number and distribution.
„ 25. The Teachers—their caste and mode of remuneration ; Rate of remuneration in each Pergunnah.
„ 26. Mode of remuneration in Hindee and Persian Schools.
„ 27. Daily food.
„ 28. Wages,—more frequent in Persian Schools.
„ 29. Fees,—more frequent in Hindee Schools.
„ 30. Miscellaneous receipts.
„ 31. Holidays in Persian Schools—in Hindee Schools.
„ 32. Festivals in Persian Schools—in Hindee Schools.
„ 33. Other perquisites enjoyed by Persian Schoolmasters.
„ 34. Scholars in Persian Schools—age at entrance, inspection, and at leaving.
„ 35. Castes of the Scholars.
„ 36. Mode of study, and subjects and books read ; classified list of books.
„ 37. Arabic sometimes taught in conjunction with Persian.
„ 38. Formal Arabic.
„ 39. Classification of Schools according to subjects.
„ 40. By whom the Schools are supported.

Para. 41. General remarks on the constitution, *first* of the Hindee Schools—duration of Teachers' incumbency.

„ 42. Duration of Schools: defect in statement—in part supplied; classes of Schools chiefly affected by this omission; Schools not affected.

„ 43. Different degrees of permanence where a School is always attached to a village.

„ 44. Common village Schools, and uncertainty of their continuance.

„ 45. Circle of Teacher's labours.

„ 46. Majority of Hindee Schools of this uncertain character. Occasions of interruption, and seasons favorable to instruction—Average period of study.

„ 47. Constitution of Persian Schools; less scattered and more permanent than Hindee Schools—duration of Teachers' incumbency.

„ 48. Sanscrit Schools—Teachers, and mode in which they are remunerated.

„ 49. Schools permanent.

„ 50. Scholars and their castes.

„ 51. Age of students at entrance, at inspection, and at leaving. Course of study.

„ 52. Formal Arabic.

„ 53. English School.

„ 54. Government solicited to extend their patronage to the School. General remarks upon the state of education in Futtehpore. Proportion of children of a school-going age, and of children actually instructed: reasons adduced why this average is too low, and why it ought to be increased by contracting the School-going age.

„ 55. Domestic education.

„ 56. The different branches how related to one another.

„ 57. How far these particularly affect the means proposed for elevating the character of the Schools.—Peculiar advantages of any effect produced upon the Hindee Schools.

„ 58. Difficulties of working upon the Persian Schools.

„ 59. Sanskrit and Formal Arabic Schools.

„ 60. Notices a report which was current in the District.

REPORT

ON THE

NATIVE SCHOOLS

IN THE

FUTTEHPORE DISTRICT, N. W. P.

FROM W. MUIR, ESQUIRE,
Late Offg. Collector of Futtehpore.
TO JOHN THORNTON, ESQUIRE,
Secy. to Govt. N. W. Provinces.

AGRA,
Dated the 12th January, 1846.

SIR,

I have the honor to report, for the information of the Hon'ble the Lieutenant Governor, that the instructions conveyed in your circular letter No. 460, dated the 7th June last, have been duly carried into effect. Had circumstances permitted of my remaining at Futtehpore during the cold weather, I should have been able to investigate more closely into the constitution of its schools, and the character of the education imparted in them, and I am conscious that much valuable information may have escaped me, which a more extended inquiry would have brought to light. At the same time, I am persuaded that the statements are sufficiently perfect for all practical purposes, and do give a correct idea of the state of education in the District. I was unwilling, therefore, that any unnecessary delay should take place in their transmission; and although I am aware that my remarks must be incomplete, and my deductions perhaps crude, still I am possessed of advantages, in having *personally* conducted the investigation, which my successor could not be supposed to have. I did myself the honor of forwarding the statements from Azimgurh under cover of a letter, dated the 3rd instant, and I now beg to add a few remarks which may tend to their elucidation.

Reports completion of the investigation and submission of the School statements.

2. The returns of villages were prepared according to paragraph 17, and issued upon the 25th June to the tehseeldars, by whom the work was immediately commenced. Advantage was taken of the arrival of the putwarees, with their yearly papers, to collect *information on the subject; but this* was only of such a general nature as served to guide the steps of the canoongoes or mohurrirs, who were sent out early in July in every direction where schools were ascertained to exist. By the close of August these inquiries were completed, and I received the statements (which had meanwhile been very generally tested by the tehseeldars themselves), during the months of September and October. It is of importance to mark the *season* at which the investigation took place, for the Hindee schools in particular, as will be hereafter seen, are greatly affected by the variations of the year.

Manner and progress of the inquiry.

3. During the months of October and November, I happened to be n the interior of the District, when I availed myself of the opportunity to visit all the schools which lay within the reach of my camp.

What Pergunnahs were personally visited and tested.

I was thus enabled to test and to assure myself of the accuracy of the returns in the tehseeldarees of Kora, Bindkee, Futtehpore and Hutgaon, in which jurisdictions I visited about fifty schools, of which a half were Hindee, a third Persian, and the remainder Sanskrit. In the Pergunnahs of Ekdillah and Ghazeepore, I have every reason to believe that the statements were prepared with even greater accuracy, for the tehseeldars, who are both men given to minute inquiry, went over most of the villages, and personally ascertained the correctness of the various details.

General result.

4. The general result will be gathered from the annexed statement, in which, for the purposes of comparison, I have added the area and population of each Pergunnah. In this form, and in the following remarks, I have arranged the tehseeldarees from West to East. To these may be added 144 boys who were absent at the time of inquiry, making a total of 3,030 persons under instruction.

General Statement.

Pergunnah.	Area in square miles.	Population.	Hindee.		Persian.		Sanskrit.		Formal Arabic.		English, Persian and Oordoo.		Total.	
			Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.	Schools.	Scholars.

TOTAL, ...	1578	380086	181	1718	129	817	46	289	5	25	1	37	362	2886

Abstract of the castes of the scholars.

5. Of the entire number of scholars found present, 20½ per cent. are Mussalmans, 29⅝ per cent. Brahmins, 9 per cent. Rajpoots, 14½ per cent. Kayusths, and 12⅓ per cent. Bunniahs, the remaining 14 per cent. is composed of a variety of castes, of whom the Koormees, who form 3½ per cent., are the most numerous.

Distribution of the schools.

6. The following detail will give some conception of the manner in which the schools are distributed. In the town of Futtehpore there are 31 schools, in that of Huswa 12, in Jehanabad there are 9, and in Kora 8, Dhata contains 7, and Bindkee (Old and New) 6; in five villages there are in each 4 schools; in sixteen, 3; and in thirty-one, 2; while one hundred and fifty-nine contain but *one* school each.

Number of schoolmasters, and their receipts.

7. There are 366 schoolmasters and pundits, whose average age is 40 years and 7 months. Of these 64 teach gratis, and the other 302 receive an annual income of about Rs. 15,839, which falls at the average of Rs. 3-9-8 per teacher, (*i. e.* of the 366.)

Mr. Adam's arrangement adopted in the following report.

8. The systems of education embraced in these general remarks are so widely different, that it would be unprofitable to descend further into particulars without arranging the details, according to the classes to which they refer. Having been desired by you to follow, as far as possible, the arrangement

pursued by Mr. Adam in his report, I commence with the Hindee schools, which, if not the most important, are at least the most numerous.

HINDEE SCHOOLS.

Their number and distribution.

9. There are in the whole District 181 Hindee schools, conducted each by a single master. Two villages contain each 4 schools, two contain each 3, and eighteen contain each 2 ; while no less than 131 schools are situated in as many separate villages. From this it may be gathered, that they are not confined to the larger towns, but are scattered chiefly among the secondary villages.

Teachers.

Their castes.

10. The teachers are called *Bhyajee*, and sometimes *Gooroojee*. The average of their ages is 39 years and 8 months. As might be anticipated, they are principally Kayusths, who compose 78 per cent. of the whole. The rest are chiefly Mussulmans, the prevalence of whom in this department may, perhaps, be attributed to the number of Mahomedan proselytes in this District. The almost entire absence of other castes will be learned from the following statement :

Mussalman	teachers	34
Kayusth,	ditto	142
Brahmin,	ditto	1
Rajpoot,	ditto	1
Sonar,	ditto	1
Bunnia,	ditto	1
Telee,	ditto	1

Mode in which they are remunerated.

11. Two of these afford gratuitous instruction, one, a Telee, in Hutgaon, who has at present only his own children for pupils, the other a putwaree in the same Pergunnah, who teaches for his own amusement or gratification. The rest are remunerated in a variety of forms, which are arranged in the following table according to their different descriptions :

		Rs.	A.	P.
6	Teachers receive only wages, altogether, per mensem,	10	14	0
23	„ only fees, „ „ „	84	1	0
10	„ wages and fees „ „ „	34	12	0
45	„ wages and daily food, „ „ „	153	2	0
15	„ wages with food and fees, „ „	71	12	0
3	„ only food, „ „	6	0	0
1	„ wages and daily parched corn, „ „	1	8	0
67	„ fees and food from the boys in rotation, „	252	15	6
3	„ fees and daily parched corn, „ „	6	10	0
2	„ wages, food, and clothing, „ „	6	8	0
1	„ wages from master of house, and food from scholars in rotation, per mensem, ...	3	0	0
1	„ receives food from master of house and fees from scholars, per mensem, ...	3	0	0
1	„ daily food and occasional supplies of money, per mensem, ...	1	4	0
1	„ monthly fees, and fees by contract, per mensem,	16	0	0

I have thought it unnecessary to swell out this statement with a specification of the holiday and other perquisites generally received ; these will be explained hereafter. The various receipts which make up the Hindee teachers' allowances resemble, in so many particulars, those of the Persian schoolmaster, that it will be advisable to notice them together. I may here just observe, that 38 per cent. of them is composed of daily food, which has possibly been too highly estimated.

Rate of remuneration in each Pergunnah.

12. The above statement shows that 179 teachers receive an annual income of Rs. 7,816-14, or Rs. 651-6-6 per mensem, which falls at the rate of 3-10-3 for each teacher. The following form will display the portion of this belonging to each tehseeldaree.

Tehseeldaree.	Number of Schools.	Monthly Income of Teacher.			Average per Teacher.		
Kora,	27	114	10	0	4	3	11
Bindkee,	35	130	9	0	3	11	7
Futtehpore,	34	107	14	6	3	2	9
Ghazeepore,	32	115	8	0	3	9	9
Hutgaon,	34	111	12	0	3	4	7
Ekdillah,	17	71	1	0	4	2	10
Total,	179	651	6	6	3	10	3

I was not prepared to find the highest rates of remuneration in Kora and Ekdillah, and the lowest in Futtehpore, for the appearance of the schools would have probably led me to an opposite conclusion; a few extreme cases have, however, deranged the average, and the *general* returns would not be found far to differ.

Abilities of teachers.

13. The teachers are generally of very moderate abilities, and are possessed of little more information than what they profess to impart. I have heard of only one who could aspire to the title of *learned:* he is a Kayusth, by name Incha Doss, and teaches in Chuck Beraree, Pergunnah Huswa, where he receives scarcely Rs. 5 per mensem. He writes Hindee verses, and is said to have composed several works.

The scholars; their ages at entrance, at inspection, and at leaving.

14. There are 1,718 Hindee scholars, exclusive of 85 who were absent during the investigation; which is at the rate of 9½ and (including the absentees) of nearly 10 boys, to each school. The average of their ages at entrance is 9 years and 6 months, and at inspection 10 years and 7 months. As the great majority of the schools were but of very short standing, it was not possible to obtain any satisfactory data as to the length of tuition, or the age at which the pupils would leave. In 69 of the older schools, however, the age at departure of several pupils, who had actually quitted, was ascertained, and the average appears to be 14 years and 10 months; but in this estimate probably those only who left the school *fully* educated in its course of study, are included. The particulars of these 69 schools are arranged below, as far as possible, in detail:

Tehseeldaree.	Age at				Period employed in receiving Instruction.	
	Entrance.		Inspection.		Leaving.	
	Yrs.	Mos.	Yrs.	Mos.	Yrs.	Mos.	Yrs.	Mos.
Kora,	9	1	10	8	14	5	5	4
Bindkee,	8	6	10	3	15	8	7	2
Futtehpore,	9	2	10	11	13	4	4	2
Ghazeepore,	10	7	11	5	15	4	4	9
Hutgaon,	9	8	11	9	15	0	5	4
Ekdillah,	9	3	10	8	15	2	5	11
Total,	9	3	10	11	14	10	5	7

The time employed in receiving instruction, it will thus be observed, varies from 4 to 7 years. The age at entrance, however, as far as this calculation is concerned, is not very much to be depended upon, as the Hindee Schools are of so fluctuating a character, that it is probable a large number of the pupils had received instruction elsewhere, before joining the institution in which the present investigation found them. As far as my own inquiries extended, *seven* years appear to be regarded as the most auspicious age for commencement, and I observed such a fear to prevail of beginning at *eight*, that boys who had passed over the proper age were kept back till *nine*, some Brahminical inquiry being moreover requisite for fixing a propitious date.

15. The scholars may be arranged according to the most prevalent castes in the following manner: the figures denote the amount per cent.: A detail of their castes.

Mussulmans, ...	4
Brahmins, ...	31½
Rajpoots, ...	14
Kayusths, ...	7½
Bunniahs, ...	20
Other Castes,...	23

The following detail, giving a further analysis, may prove interesting:

Tehseeldaree.	Scholars.						
	Mussulmans.	Brahmins.	Rajpoots.	Kayusths.	Bunniahs.	Other Castes.	Total.
Kora, ...	7	183	8	10	112	64	384
Bindkee, ...	2	133	77	61	56	76	405
Futtehpore, ...	14	86	20	22	70	79	291
Ghazeepore, ...	4	53	83	14	33	47	234
Hutgaon, ...	6	44	52	13	35	67	227
Ekdillah, ...	31	42	1	2	41	60	177
Total, ...	64	541	241	122	347	393	1718

The unusual number of Mahomedan, and paucity of Kayusth and Rajpoot scholars in Ekdillah cannot fail to attract notice, and may be satisfactorily explained by the excess of Mussulman converts in this quarter. It is observable too, that the Kayusth scholars bear no proportion to the Kayusth *teachers*, (many of whom are probably educated at home); nor to the Kayusth scholars in the Persian Schools.

16. Of the 23 per cent. of other castes, 5 are composed of Koormees, of whom one-half are to be found in Ekdillah, chiefly in the little pergunnah of Dhata, and the remainder in the opposite, or Western extremity of the District. The Lodha caste is also numerous in Ekdillah, but all the others which are Miscellaneous castes.

most prominent elsewhere are entirely wanting here, and seem to have been absorbed by the Mussulman faith. The following is a detail of the miscellaneous castes:

Koormees,	84	Mochees,	4
Bhoorjees,	38	Mullahs,	4
Kullars,	37	Oudhyas,	4
Sonars,	34	Malees,	3
Lodhars,	28	Thatheras,	3
Telees,	28	Sengrours,	3
Halwaees,	27	Chumars,	3
Aheers,	16	Koomhars,	2
Lohars and Burhays,	14	Bairagees,	1
Tumbolees,	13	Munhyar, or Chooree Farosh,	1
Bhats,	12	Kuhar,	1
Mooraees and Kachees,	11	Jat,	1
		Kanjar,	1
Hujjams,	9	Putwa,	1
Durzees,	6		
Khuttrees,	4		393

The caste of the absent boys was not ascertained: they amount, however, only to 4¾ per cent., the season of investigation being favorable to regular attendance.

Course of study pursued.

17. The course of study pursued in these Schools is very simple, and does not require many remarks. Bunniahs' and Muhajuns' accounts, or the book-keeping of retail dealers, and the forms of banking business, which include the writing and reading of letters of advice and other correspondence, and agricultural accounts, which involve the measurement of land, the calculation of rent, the modes of recording demands, receipts and balances, and the other duties of the Putwaree, form the utmost extent of learning imparted. In almost every School, the Bunniahs' system of accounts is taught first, and as the foundation of the rest; to this, where they are required, are superadded the Muhajuns' forms of business; and village accounts are generally confined to the smaller villages in the country, where they are required for zemindars' children, or for others who are likely to have charge of any landed concerns. The following statement will show to what extent and with what combinations each system prevails, and in what quarters:

Classification of the Schools.

Tehseeldarree.	Number of Schools in which are taught			
	Bunniahs' and Muhajuns' accounts, reading and letter writing, &c.	Ditto ditto and Agricultural accounts.	Only Agricultural accounts.	Only accounts.
Kora,	13	7	0	7
Bindkee,	19	10	1	15
Futtehpore,	13	15	3	13
Ghazeepore,	4	21	2	5
Hutgaon,	13	11	0	12
Ekdillah,	0	17	0	0
Total,	62	81	6	52

The last column embraces those Schools in which, although Bunniah and Muhajunee forms of business will probably be introduced, simple arithmetic is alone at present taught. In one of these Schools, in the famous place of pilgrimage, Sheorajpore, which is peopled by Gungapooters, 23 Brahmins are taught by a Kayusth how to keep the accounts of their *Birt* or ceremonial receipts.

Detail of the subjects studied.

18. The most remarkable feature in these Schools is the tables for multiplying whole and fractional numbers, which are learned to great perfection. The usual course of study is as follows ;—the alphabet ; *ginti*, or counting to a hundred ; the *pahára*, or multiplication table, in which the multiplicand ascends to *forty*, the multiplicator only to *ten ; saweiya, deorha, adhaya*, or multiplying by $1\frac{1}{4}$, $1\frac{1}{2}$, and $2\frac{1}{2}$ any whole number up to ten ; *honta, dhyoncha*, and *pahuncha*, or the multiplication in a similar manner by $3\frac{1}{4}$, $4\frac{1}{4}$, and $5\frac{1}{2}$; *girha*, multiplying any number to twenty by 11 ; *powanna* multiplying by $\frac{3}{4}$; *ekanna*, and *bikat pahar*, the multiplication of any two equal sums together, and of the compound figures $2\frac{1}{2}$, $3\frac{1}{2}$ and $4\frac{1}{2}$, by the fraction $\frac{1}{2}$; but these two are little used ; *mantra*, or spelling and reading, which sometimes precedes, but generally follows the arithmetical tables ; then follow the composition and decyphering of *chittees* or letters of advice and other common forms of correspondence, *teeps, tamasooks*, and other species of bonds : to calculate in beegahs and prepare village accounts is one of the last parts of this course, which is, however, greatly curtailed, where the education is intended only for agricultural pursuits. There occurred no instance in which any *book* or literary composition was read,—the object of tuition being merely to give the power of communicating and interpreting the commonest ideas recorded in the usual colloquial language. The Bunniahs', Muhajuns', and Kayusths' children who have an object in view, speedily master this course ; but the boys of zemindars and other castes are long at School, and after all learn but little ; they are withdrawn whenever their services are required ; in their absence they lose the little they had attained, and in the end preserve only a few simple accounts which their situation in life obliges them to practise.

Boards used to write upon.

19. Small black or coloured wooden boards *(takhta)* are universally employed, both for writing and accounts, until the scholar is perfect : in some places a chalk pencil is used, in others a reed dipped into chalk dissolved in water, and kept like ink in a small earthen vessel ; the former practice I found to prevail in the Western, the latter in the Eastern, pergunnahs. Beginners are occasionally directed to overlay the board with brick-dust, and practise upon it until they can trace the forms of the letters and figures.

Places employed as School-houses.

20. Excepting on one occasion, I met with no building which had apparently been erected on account of the School. Where a person invites a teacher, he places at his disposal the verandah of his house for the accommodation of all who may choose to attend. For bunniah and retail accounts, a shop in the bazar is generally made to answer the purpose of a School-house, and a shady tree or elevated *chabootra* is resorted to when the bazar is thronged, or the weather may render such a change agreeable. The following detail will help to show how far each system prevails :

6	persons	teach	in their own houses.
35	,,	,,	in shops in the bazar.
58	,,	,,	in the houses of zemindars.
82	,,	,,	in the houses of other persons.

Remarkable School in Kudjwa.

21. The most remarkable Hindee School in the district is that in Kudjwa, which is held in a regular School-house capable of containing (as the native scholars sit), about 150 boys. The present attendance, although not at its height, amounts to 123. All the branches of Hindee are here taught, though when I visited it there happened to be no scholars studying agricultural accounts. A curious system prevails in this School, of remunerating *by contract*. The amount to be paid for fully instructing a boy is fixed at from 10 to 17 rupees, and is paid when he is pronounced to have completed his studies : of the whole School, 86 boys were upon this footing, and the aggregate of their contract amounted to 1,198 rupees. Only 15 boys pay monthly fees, and the master can afford to educate 22 others gratis,

as he receives an income of, at least, 16 rupees per mensem. This School owes its importance to the commercial prosperity of Kudjwa.

Hindee taught in three Sanskrit Schools.

22. It ought here to be mentioned that there are three Sanskrit Schools, two in Hutgaon, and one in Futtehpore, in which Hindee reading and accounts are taught: in one of these, 4 Brahmins, and in the other two, 6 Brahmins, one Rajpoot, one Kayusth, and one Bunniah, are educated. These are extraordinary instances arising out of the peculiar necessities of the scholars.

Further remarks below.

23. When treating of the Persian Schools, some further remarks will be made regarding the constitution of the Hindee Schools.

PERSIAN SCHOOLS.

Their number and distribution.

24. The Persian Schools amount to 129, and are conducted by an equal number of masters. They are distributed as follows; Futtehpore Khas contains 17, Huswa 8, Jehanabad 6, and Kora 4 Schools; three villages contain each 3, and ten, each 2 schools, while 65 are situated each in a separate village.

The teachers, their caste, and mode of remuneration.

25. Of the 129 teachers, 9 are Kayusths and the rest Mussulmans; their average age is forty years and one month. Fifteen of these offer their services gratuitously, and one has no stated allowance, but receives whatever his pupils choose to give. There remain 113 whose income is certain, or at least sufficiently fixed and ascertained to enable us to form a pretty correct estimate of its amount. The following is a detail of the nature and extent of the receipts:—

7	teachers receive only wages,—*in all* per mensem,	...	25	5	0
3	„ „ only fees, ...		13	6	0
52	„ „ wages with daily food, ...		271	15	10
9	„ „ wages and fees, ...		50	0	0
36	„ „ wages with food and fees, ...		224	8	0
2	„ „ food from master of house, and fees from children, ...		11	6	0
2	„ „ wages and fees, with food in turn from children, ...		11	0	0
1	teacher receives wages by a *berar* or proportional distribution, and food in rotation from pupils, ...		4	8	2
1	„ „ receives daily food and clothes. ...		2	2	0

Rate of remuneration in each Pergunnah.

The total annual receipts are thus: 7,377 rupees 10 annas, and fall at the rate of Rs. 5-7 monthly to each teacher. The following is a similar statement to that given for the Hindee Schools:—

Tehseeldaree.	Number of Schools.	Monthly Income.			Average per Teacher.		
Kora, ...	8	36	15	0	4	9	10
Bindkee, ...	15	84	14	0	5	10	6
Futtehpore, ...	46	247	6	0	5	6	0
Ghazeepore, ...	13	75	14	0	5	13	4
Hutgaon, ...	19	108	6	0	5	11	3
Ekdillah, ...	12	61	5	10	5	1	10
Total	113	614	12	10	5	7	0

It will be remarked that the proportion which prevailed regarding highness of income in the Hindee Schools is here entirely reversed ; and it is quite possible, and perhaps probable, that the quarter where the most flourishing Schools of one class are to be found, should be most deficient in other. It will likewise be observed, that the rate of remuneration generally is much higher in the Persian than in the Hindee Schools, but no more so than the superior class of the teachers, and higher nature of the learning imparted, would lead me to suppose.

Mode of remuneration in Hindee and Persian Schools.

26. The following remarks, regarding the remuneration of the teachers, refer likewise to those of the Hindee Schools. (Vide para. 11).

Daily food.

27. With the Persian teachers, *daily food* constitutes nearly as important a portion of their receipts as with the Hindee, for it amounts to about 30 per cent. of the whole remuneration. In both departments it is called *Khoorak*, and implies in general entire alimentary support. I was disposed at first to estimate it at the value of from 12 annas to 1 rupee 8 annas per mensem, but the majority of the tehseeldars placing it higher, and being willing that the Schools should have the benefit of every doubt in their favour, I have assumed *two rupees* as the standard, which however frequently falls, in the Hindee Schools, to 1 rupee 8 annas. The superior style of Mahomedan living renders it probable that this standard is not much higher than it ought to be in the Persian Schools, and indeed in some of them this item is estimated at 3 rupees per mensem ; but I am doubtful whether with most of the Hindee teachers it rises above 1 rupee 8 annas, and whether it does not often fall below one rupee, and even twelve annas per mensem : the circumstances of individual families and teachers will, of course, modify individual cases ; the doubts I entertain regard the general run of the Schools. These remarks appear sufficient to qualify any excess of income which may have been admitted under this head.

Wages, more frequent in Persian Schools.

28. *Wages* are given exclusively, or almost so, by the parent or master of a house, who invites and entertains the schoolmaster. They are paid in 106 of the 129 Persian Schools, and in only 81 of the 181 Hindee Schools, which shows that this system, which in most cases implies a species of domestic instruction, is more frequent in the former. In 91 of these cases in the Persian Schools, and in 63 in the Hindee, daily food is given by the owner of the house in addition to the wages. In one instance the wages are made good by a *berar*, the boys' parents being each responsible for a proportional share of the monthly sum of 2 rupees 8 annas, and the boys besides supply the teacher, in rotation, with food.

Fees, more frequent in Hindee Schools.

29. *Fees* are received by teachers who keep their own Schools, and also by salaried instructors, who choose to improve their means by admitting children of other families to the benefit of their tuition. Fees are paid in 119 Hindee and only in 52 Persian Schools, which proves that this independent mode of instruction is more customary among the Vernacular institutions. In only 24 instances of the latter are both kinds of remuneration, wages and fees, realized by the same teacher ; whereas in the Persian schools, 46 persons avail themselves of both, showing that even of those Persian teachers who do receive fees, the greater portion are already entertained as paid servants, and extend their labours merely as a secondary object. Where the School is an independent one, and the master is remunerated by fees, scholars generally supply him with food in rotation ; such is the case in 68 of the 119 Hindee Schools in which fees are received ; this custom occurs but seldom in the Persian institutions.

Miscellaneous receipts.

30. There are a great variety of other miscellaneous receipts, such as clothes (*sarmaee*, and *jooráwan*), parched grain (*chabena* and *charban*), and presents in money or kind ; but the only items which seem to call for any particular notice are the holiday and festival perquisites.

Holidays, in Persian Schools.

31. In the Persian schools *Friday* is a standing holiday, for which each pupil presents an offering to his master of one or two *pysa*, and occasionally of as much as an anna ; this is called *Jumajee*, and in some places *Jumarátee*.

In Hindee Schools.

The Hindee scholars enjoy *eight* monthly holidays, viz., two *paráva*, two *ashtamee*, two *choudas*, (*chaturdasee*), one *pooran máshee* and one *amáwas*, or the 1st, 8th, 14th, and 15th days of each half of the Hindoo month. The common account of these holidays is that, by the Shasters, to study on the 1st is unprofitable; that on the 8th the teacher, on the 14th, the scholar, and on the 15th both teacher and scholar are injured by imparting and receiving instruction. Sometimes the 8th and 15th alone are observed, making only *four* holidays. The general present made by Hindoo scholars is from a fourth to a half of a seer of parched grain (*chabena*), or supplies of *atta* and *dal* (*sidha*). The holidays are called in the Hindee Schools *anjha*, and the holiday allowance is designated by the same name, and sometimes by *anjháee* or *anjhey* and *choottea*. No new lesson is given out on the day preceding, but it is not till the boys assemble next morning, repeat the old lesson of the past day (*muhla amokhta*), and present their offering, that the holiday is declared by the master.

Festivals, in Persian Schools.

In Hindee Schools.

32. There are three principal Mussulman festivals, Eed-ul-Fitr, Eed-uz-Zuha, or Bakr Eed, and Shabibarát, which are universal holidays in the Persian Schools, and upon which each pupil is expected to give a present of from 4 annas to a rupee. Six grand festivals are observed by the Hindee scholars, Dusserah, Diwalee, Basant, Holee, Gooriya, and Saluno; the custom is for the teacher to write upon paper of variegated colours, a verse in praise of the holiday, and to give a copy to each of the boys, who, in return, presents an offering varying from two *pysa* to 4 annas, and occasionally amounting to 8 annas, and even a rupee; after being satisfied with these presents, the schoolmaster grants the holiday. In the Holee, the boys bring cooked food, and in the Dewalee, sweetmeats, especially in towns. On *Sawansudee Panchamee* commonly styled *Nág Panchamee* the teacher prepares pictures of serpents, and sticks them up at the scholars' doors, receiving in return from some, uncooked food and clothes, from others, pots and utensils, and sometimes money: these presents are called *nágdharáee*. There is another custom which however is confined to large towns: on the anniversary of the *Pooja Gunnesh Chouth*, a procession is made through the streets headed by music; the boys decked out in gay parti-coloured clothes, singing rhymes and beating in cadence short coloured sticks, one in each hand, follow the master, who forcibly to mark his anxiety for a new suit, is dressed in tattered garments; the cavalcade proceeds to each scholar's house, and extorts clothes and money, sweetmeats and *pán*, the boys sharing in a portion of the two latter.

Other perquisites enjoyed by Persian Schoolmasters.

33. If the pupils of a Persian school be Hindoos, the master, whether a Hindoo or Mussulman, gets not only the Hindoo festival presents but the Mahomedan too. There are also a few other sources of gain peculiar to the Persian teacher—a perquisite of from 2 annas to a rupee on the commencement of a new book,—the *rusoomi-shadee*, or perquisite of clothes and money on the marriage of a scholar,—and the *bismilla karaee* or *shagoon*, a present made on the ceremony of a boy's being first sent to school at the proper age of 5 years: where the family cultivates land, the teacher sometimes gets a share (*Chanta**) in both rubbee and khurreef crops, which is set apart as *mecan-jee ka chanta*. It is difficult to estimate exactly the proceeds of all these perquisites, which are very generally enjoyed, though not expressly mentioned in the table of receipts; many of them appear to be insignificant, yet they are undoubtedly of considerable moment to the teacher, and show how intimately he is associated with the persons whom he educates, and how naturally he takes up his position in their social and domestic relations.

Scholars in Persian Schools, age at entrance, at inspection, and at leaving.

34. In the Persian Schools there are (exclusive of 36 absentees) 817 scholars, which is at the rate of 6½ to each School. The average age at entrance is given at 11, and that when the School was visited, at 12¼ years. In 48 Schools the age of pupils who had left was reported, and

---

* I had occasion a short time ago, in a letter on the revision of the chowkeedaree establishment, to explain that a *chanta* means a measure of 10 seers,—a 1-16th part of a *pata*, or heap of 4 maunds.

the average falls at 18 years 11 months; the following is a detail of the several particulars in these schools:—

Tehseeldaree.	Average age of Pupils at			Time spent in receiving Instruction.
	Entrance.	Time of Inspection.	Leaving.	
Kora,	8.9	15.4	20.10	12.1
Bindkee,	9	10.8	18.4	9.4
Futtehpore,	8.5	13.6	19.2	10.9
Ghazeepore,	10.8	12.2	20.6	9.10
Hutgaon,	9.5	12.11	18.7	9.2
Ekdillah,	9.3	12.1	17.3	8.
Average,	9.2	12.8	18.11	9.9

The duration of instruction is, I believe, very near the truth; but both the age at entrance and that at leaving are probably exaggerated, the latter, because the age reported is too often that to which the pupils ought to stay, rather than that at which they generally leave; the former, for the same reason as in the Hindee Schools, (paragraph 14); still the age of *five* which is generally assumed as that of commencement, appears to me much below the real average, because the ceremonial custom is not always practised, and when observed is often a mere nominal rite, the real instructions not commencing till long after.

35. Of the scholars, 486 or 59½ per cent. are Mussulmans; and 277 or nearly 34 per cent. Kayusths; the remaining castes may be enumerated as follows: Castes of the scholars.

Brahmins,	...	...	...	...	16	Sonars,	...	...	...	...	2
Rajpoots,	...	...	...	...	16	Aheers,	...	...	...	...	2
Bunneahs,	...	...	...	...	7	Kullar,	...	...	...	...	1
Koormees,	...	...	...	...	6	Kachee,	...	...	...	...	1
Bhat,	...	...	...	...	2	Baroe,	...	...	...	...	1
				Total,	...	...	54			

Nothing here is remarkable but the paucity of scholars other than Mussulmans and Kayusths.

36. The usual plan of instruction is followed in the Persian Schools. The scholar commences with a few short poems, generally the *Kareema* and *Manaqeema*, which he is required to read, without comprehending their meaning; he thus acquires the faculty of reading, accompanied with the tone and modulation of voice which are thought indispensable for Persian poetry. Then follow a species of rhyming Dictionary, of Arabic, Persian, and Hindee words, (which being committed to memory assists the scholar in translating), and grammatical works. The Gulistan and Bostan, the most favourite text-books, are often read simultaneously with these. But the most extensive class of books are those which contain forms and models of approved epistolary composition; these are universally read from the aptitude for official employment and other business which they impart. I have arranged the school-books in the following list according to the above classification, and have added a column denoting the number of Schools in which they are severally read: such information may prove useful to those who are entrusted Mode of study and subjects and books read.

with the publication of Oriental works, as it points out those which are most popular and have the greatest circulation. The whole of the first class, and many of the others, are lithographed at Lucknow, and hawked about the country.

CLASSIFIED LIST OF BOOKS.

Class I.—*Short Poems.*

	In how many Schools read.
Kareema, called also *Pandnameh*, containing moral and religious precepts, by Saadi, ...	45
Mamaqeema, a *Soofee* poem, ...	32
Mahmood-nameh, a love poem,	8
Ataee-nameh,	3
Dewan-i-navedi	1

Class II.—*Lexicons and Grammars.*

Khaliq Baree, a rhyming Dictionary of Arabic, Persian, and Hindee synonymes,	11
Nisabi Sibean, ditto for Persian and Arabic words,	
Amed-nameh, explaining the tenses and inflections of the verb,	21
Risala byan masádir, on Persian roots,	1
Qawaid Farsee,	1

Class III.—*Epistolary Composition, Modes of Address and Official Forms.*

Dustoor-us-Sibean,	54
Insha Khaleefa,	39
Madhorám,	26
Abul Fuzl,	9
Roqaat Alamgeeree,	6
Dustoor-ul-Maktobat,	6
Insha Zood faham,	6
Insha Ajeeb,	6
Insha Faiq,	5
Insha Dilkhoosha,	3
Rooqaati Amanoolla,	2
Panj Rooqaat,	2
Roshan Kalam,	2
Insha Muftah-ul-Tarah,	1
Runchoor Doss,	1
Rooqaat Nizamee,	1
Insha Bahra Koosha,	1
Insha Mooneer,	1
Insha Mehtab Roy,	1
Roqaat-i-Danish,	1
Taheer-i-Waheed,	1

Class IV.—*Poetry.*

Bostan,	75
Secundernameh,	27
Dewan-i-Ghanee,	8
Dewan-i-Holalee,	2
Musnuvee Ghanimat,	1
Qasaid Oorfee,	1
Dewan-i-Saib,	2
Nuldaman,	1
Dewan-i-Herkeran,	1
Dewan-i-arifee,	1

Class V.—*Miscellaneous.*

Wagaia Namat Khan Alee,—the Wars of Alumgeer and Tanah Shah, ...	4
Shamsher Khanee, taken from the "Shah-Nameh,"	1
Moofarah-ool-kuloob, a medical work, ...	1
Risalah Qazee qootub, on the requisitions of the Mussulman religion, ...	1
Nam Haq, ditto, ...	1
Gulistan, ...	74
Bahar Danish, a love story, ...	32
Mina Bazar, ...	4

The following are used each only in a single School :

Tooteenameh.	*Mohun Kewal Ram.*
Hikayat Nadira.	*Goolozar.*
Fawaid-ul-Mubtadee.	*Hameshá Bahar.*
Showq Afza.	*Hooswuince.*
Anwari Soheili.	*Zahooree.*
Towkeat-i-kesra, or Orders of Noushirwan,	*Jama-i-Abbas.*
Asma-i-Parsi.	*Saudnameh.**

A teacher in Huswa, Sheikh Boorham-ud-deen, surnamed *Parsa*, is reputed to be very learned; he has composed several works,—*Boorhan Danish-Dewan-i-Parsa* and *Rooqaat-i-Parsa* in Persian, and *Dewan Parsa* and *Musnavee* in Oordoo.

Arabic sometimes taught in conjunction with Persian.

37. With Persian the elements of Arabic are occasionally taught, but that only in the larger towns and more advanced Schools. The following books are read in this department: in grammar (etymology), *Sarf Meer*, *Mizan*, *Munshab*, *Tasreef*, or *Panj Gunj*; (syntax), *Naho Meer*, *Mita Amil*, *Shara-i-Nuta Amil*, *Hidayet-ul-Naho*, *Shara Mulla*, *Kafia*; in logic, *Shara Tahzeeb*, *Sharah Isbat*: in Arabic composition, *Mukhtasar Manee*; on religious observances, *Shara Wagaiya*, *Shara Mooslim Miscat*.

Formal Arabic.

38. Formal Arabic, or the reading of the Koran or certain siparas, frequently accompanies Persian teaching. The few instances in which it forms the whole business of the School are classed under a separate head.

Classification of School according to subjects.

39. The following table will show how and to what extent these additional studies are united with Persian :

Number of Schools in which are taught	Persian only, ...	88
	Persian and learned Arabic, ...	7
	Persian and formal Arabic, ...	30
	Persian with learned and formal Arabic, ...	1
	Persian accounts, ...	3

By whom the Schools are supported.

40. A considerable number of Schools are conducted gratuitously by persons who are supported by rent-free land or other independent resources, who teach in their own houses, and whose ancestors have perhaps preceded them in the duty: here the formal reading of the Koran is frequently practised, especially when the School is kept up as a meritorious act. Nearly the whole of the remaining teachers have their Schools in the houses of the parties by whom they are paid: a considerable number of the city Schools are established by persons connected with the Government offices. The following statement will give some idea of the extent of each of these classes.

* Most of these works are new to me, and I have no authorities at hand to consult as to whether they have been correctly represented in the above table.

Number of Schools held in the teachers' own houses, ...	16
Ditto ditto held in houses of Government officers, vakeels, &c., ...	21
Ditto ditto ditto zemindars, ...	37
Ditto ditto ditto putwarees, ...	4
Ditto ditto ditto other persons, ...	48
Ditto ditto ditto in a serai,...	1
Ditto ditto ditto in imambara, ...	2

The son of the owner of the house is styled *sar-i-maktab*, "head-boy."

General remarks on the constitution, *first*, of the Hindee schools.

Duration of teachers' incumbency.

41. I purpose now to state some particulars in explanation of the constitution and usual duration of the Schools, both Hindee and Persian; and first with respect to the former.—The statement in the margin shows the average of the term employed in teaching by the present master, as detailed in column 6 of the statements submitted. The average, 2 years and 6 months, is however enhanced by a few old Schools, and represents the state of things too favorably, for that the vast majority of the teachers had been employed but for very short periods is apparent from the following analysis:

Kora, ...	3 2
Bindkee, ...	3 10
Futtehpore, ...	3 5
Ghazeepore, ...	1 1
Hutgaon, ...	1 3
Ekdillah, ...	3 2
Average, ...	2 6

Number of Schools, in which the teacher had been employed for a period	of 10 years and upwards, ...	13
	of 2 to 10 years, ...	26
	of 1 to 2 years, ...	26
	of 6 months to a year, ...	41
	of 6 months and under, ...	77

Duration of Schools: defect in statements.

42. But these conclusions when applied to the Schools must be considerably modified; one of the few defects in the form supplied by you is the want of a column showing the length of time the *School* has existed; where an institution originated with the present teacher the sixth column, headed "period engaged in teaching" supplies this defect; but from the constant intermissions and changes of place and teacher to which most of the Schools are liable, this affords but a very imperfect criterion in general.

In part supplied.

After the statements had been in part drawn out, I endeavoured as far as possible to remedy the omission, and wherever I obtained the desired information I have entered it in the column of remarks. The second and third items in the statement last given (*viz.* the Schools, if from one to ten years' standing), are chiefly affected by this consideration: for example, I discovered that in pergunnah Hutgaon 3 Schools, in which the average time of teaching is placed at 2 years and 1 month, had actually been in continuous existence at an average for 7 years and 8 months.

Classes of Schools chiefly affected by this omission.

Schools not affected.

But with the last two entries, (*viz.* of one year and under,) the period shown in the statements as the duration of the present teachers' incumbency is also, in nine cases out of ten, that of the existence of the School itself. These are the real *village* Schools; and so long as the present characteristics of these Schools remain unaltered, the term of their existence will never appear to lengthen.

Different degrees of permanence.

43. But there are degrees in this want of permanence. The highest stage of fixity is where a School always exists in a village, but is liable to change both in the teacher and place of teaching, and further, perhaps to *interruption* and *suspension*, and therefore to variation in the children themselves; still as the institution continues in the same village, and has probably always existed in the same changeable

Where a School is attached to a village.

and intermittent state, a species of identity connects the successive forms. Such a school generally points to a village of what, in a very modified *sense*, may be called *reading* people, that is, persons who have always been desirous to keep up some species of education among their families. The parent who has children requiring education, and whose necessities, therefore, lead him to make the first move towards reviving the School, is the party who calls the teacher, and in whose house the School is held.

Common village Schools, and uncertainty of their continuance.

44. The more common forms of village Schools are distinguished by a still more brief and uncertain existence, and are dependent not only on the pleasure of the person who called the teacher, and on the inconstant fees of neighbours' children, but upon each successive stage of agricultural operations. There is no probability that a School of this description will survive the year, and indeed it is almost

certain that it will at least be suspended when any emergency tempts the parents to employ their children, and the children to amuse themselves in the occupations of husbandry. The teacher, also, is generally too ill supported to forego his fields, and is often himself the first to give the signal for breaking up the assembly. When the necessities of the season pass by, the School is sometimes revived by the return of the same master, or by the arrival of a new one, but too frequently its career is finally terminated: at other times, after thus disappearing, it arises in an altered form in the porch of some neighbour of the same or of an adjoining village, where probably the pupils and perhaps the master are the same, or vary slightly from those before. You thus frequently find a boy who can read tolerably well at a School which has existed only for a few months, and upon inquiry, ascertain that he has passed through a number of such successive institutions. These are all different *Schools*, if we adopt the real meaning of the word *maktab*, or place of teaching, but while the main body of the pupils, and sometimes the master, remain the same, they are marked by an identity certainly sufficient to distinguish them in their various positions.

Circle of teachers' labours.

45. The teacher is generally a kayusth of a neighbouring village, who desires to better his means of support, or to add to those of his family. Had the statements supplied the *abode* of the teacher, it would have been interesting to have watched the usual range of such a person's labours: but from several cases which I inquired into, I do not apprehend that they extend very far from his home, and the circle may safely be circumscribed by a radius of a few miles, at all events not exceeding ten, or at the utmost perhaps fifteen. The probabilities of his returning to his former sphere of labour depend upon the treatment and remuneration he received from the master of the house.

Majority of Hindee Schools of this uncertain character.

46. That the majority of Hindee Schools are of so temporary a nature, or of such a changeable and Proteus-like character, is proved by the statement given at the close of paragraph 41, in which above 65 per cent. of the whole number are shown to have originated within the year, and 43 per cent. within the short space of six months. A few of these will perhaps survive, but the great majority will be interrupted by the recurrence of the employments of the field, either permanently or to be reproduced in the usual course. Indeed, when the tehseeldars went round to test the accuracy of the statements, they found that the watching and gathering in of the khurreef crop had already suspended a large proportion of the Schools, and that I found the same to be often the case, in the comparatively small number which I myself visited, will be seen from the remarks which I have occasionally inserted in the statements.

Occasions of interruption, and seasons favorable to instruction.

47. The most constant season for instruction is that which intervenes between the sowing and the reaping of the rubbee crop, viz., from the months of November or December to March, (*Aghun*, *Poos*, *Magh*, and *Phagoon*,) and that would probably have been the season for obtaining the most favorable record of the extent of education.* After the gathering in of the rubbee harvest, a short period of rest is obtained, comprising a part of *Bysakh* and *Jeyt* (May, and a portion of the contiguous months), and where the opportunities of education are at hand, study is again renewed. The rains are then ushered in by the busy preparations of June for the arrangements of the new year, and as soon as the crops begin to rise, juvenile labour is especially required for weeding. A season of relaxation succeeds, and the Schools are recommenced, and numerously attended from about August to November, when the gathering of the khurreef and sowing of the rubbee again engrosses the attention. An incident described by the Tehseeldar of Ghazeepore, will show the eagerness with which these pursuits are followed, as well as afford an extraordinary and, I fear, uncommon instance of endeavour to prevent them from interrupting the operations of the School.—A School was held in the house of a zemindar of Sankha, and the teacher, in order to better his circumstances, undertook at the request of the zemindar to watch his

* It may be regretted by some that the statements were not revised and amended in the months of January and February; this however could not have been done, for the changes and modifications of even so short an interval would have required the previous statement to be almost completely cancelled and re-prepared afresh. The season actually employed for the investigation may, after all, be the best for giving a correct idea of the *average* state of education in the District.

fields; but being anxious to improve the time he took the boys with him, and seated upon the framework of bamboos and wood (*meyra* or *machán*), divided his attention between teaching his pupils and driving away the birds. The scaffolding unfortunately fell to the ground, and this exemplary master was severely injured, and the tehseeldar, when he visited the village, found the School closed and the teacher labouring under the effects of his fall.

Average period of study.

Upon the whole, from three to five months may be assumed as the average period devoted in the year to regular study.

Constitution of *Persian* Schools.

The *Persian* Schools, in proportion as they recede from the larger towns, assume many of the characteristics of the Hindee Schools, but in a very modified form. The want of permanency with them is chiefly occasioned by the illiberality or inconstancy of the parent: for the continuance of the teacher mainly, if not entirely, depends upon the receipt of his salary from the party who calls him, and in whose house he teaches: it depends very slightly upon the income derived from the children of others.

Less scattered and more permanent than Hindee Schools.

The Persian Schools are less scattered in the country; for it has been already shown that 73 per cent. of the Hindee Schools are situated each in a separate village, while only 50 per cent. of the Persian ones are so circumstanced: the presumption from this is, that the latter are more permanent, being more generally situated in towns and large villages.

Duration of teachers' incumbency.

The same conclusion is borne out by an examination into the length of time the present teachers have been employed in their several Schools, the average of the whole being 3 years and 7 months, that is, a year and two months greater than with the Hindee Schools. The following statement, corresponding with that already given for the latter, corroborates this conclusion:

Number of Schools, in which the teacher had been employed for a period	of 10 years and upwards,	12
	of 2 to 10 years,	40
	of 1 to 2 years,	16
	of 6 months to a year,	37
	of 6 months and under,	26

The proportion of Hindee Schools under 6 months was 43 per cent.: here it is only 19 per cent. The changes of the teacher, too, appear to affect the stability of the School still less than in the other department: thus in Pergunnahs Futtehpore and Hutgaon I met with 23 Schools in which the average of the present teachers' incumbency is represented at 1 year and 10 months, whereas they have actually existed at an average for 10 years and 6 months.

SANSKRIT SCHOOLS.

48. There are 46 Sanskrit Schools in the District, of which 28 are scattered in separate villages; six villages contain each two Schools, and the remaining 6 are situated in Futtehpore Khas.

Teachers, and mode in which they are remunerated.

There are 49 teachers, being 3 above the number of Schools; they are all Brahmins, and their average age is 45 years and 8 months. Of these, 44 teach gratuitously, receiving in return only the service of their pupils, and the following detail will show the species of remuneration enjoyed by the remainder:

	Rs.	As.	P.
3 teachers receive only wages,—*in all* per mensem,	20	0	0
1 teacher receives clothes and food,	2	2	0
1 teacher receives wages and land from zemindars,	8	5	4

That five teachers receive Rs. 30-7-4, or at an average, Rs. 6-1-6 each per mensem.

Many of the pundits used to hold rent-free land, which has generally been resumed, but for the most part, from the lightness of the assessment, still yields some means of support. The majority are maintained by contributions levied upon those who place themselves under their religious guidance, by the performance of rites and ceremonies, or the fees received by visiting assemblies. Instead of being supported by their pupils, it is the common practice for the pundits to supply those who come from a distance with the means of prosecuting their studies, sometimes in the shape of food and clothes, and sometimes in that of paper, books, and stationery.

Schools permanent.

49. The Sanskrit Schools are, without comparison, more permanent than any other species, as the average of the period during which the present teachers have been employed in their respective Schools is above 13 years, and many of the institutions have been conducted by their forefathers.

Scholars and their castes.

50. There are 289 Sanskrit scholars, which gives an average of 6, 1-5th persons to each School. They are all Brahmins, except four, a Rajpoot, a Kayusth, a Bunniah and a Bhut: excepting the last, these interlopers belong to the Schools noticed in paragraph 22, in which Hindee is taught.

Age of students at entrance, at inspection, and at leaving.

51. The age of the students at entrance, at the time of inspection, and period of leaving, is as follows:

Tehseeldaree.	Entrance.	Time of inspection.	Leaving.	Period employed in receiving instruction.
	Y. M.	Y. M.	Y. M.	Y. M.
Kora,	11 3	15 2	24 5	13 2
Bindkee,	9 9	13 6	28 6	18 9
Futtehpore,	12 8	18 11	23 7	10 11
Ghazeepore,	14 0	15 9	21 0	7 0
Hutgaon,	10 7	15 8	21 4	10 9
Ekdillah,	10 9	14 9	21 3	10 6
Average,	11 6	15 6	23 4	11 10

Course of study.

The period of tuition is here in some instances long, but the course of study and the manner in which it would seem to be mastered, quite warrant the idea that it is busily employed. The works studied are as follows. *In Grammar*, Saraswat: Sidhant Chandrika: Sidhant Koumodee, Bulbhudree: Ram Chandrika. *In Astronomy*, Lilavati: Brihad Jatak: Mahoorat Gunput: Shegrabodh: Mahoorat Surbuswa: Mahoorat Chintaman Keshwee: Grigha: Lagho: Jatha Langhar: Bhykyanak Graha. *In Poetry and Literature*, Raghobuns: Magh: Koomar: Kabi Pria: Rasab Pria. *Purans and sacred Writings*, Bhagawat: Adhyat Ramayana: Doorga Pat: Adit Hirdei: Hartalaka ki Katha: Adhbut Ramáyn: Mahabárat: Katha Sat Naráyan: Sidhant Bodh. *In Lexicology*, Amar Kosh. *In Witchcraft*, Mantr Shastr: Mantr Mahodadh. *On Ceremonies and Observances*, Daskuram: Tarpan: Sradh: Bibah. *In Medicine*, Nind Baidak.

Formal Arabic.

52. There are five Schools, and as many teachers of formal Arabic alone: the number of scholars is 25, of course all Mahomedans, of these it is unnecessary to mention more than that they read and commit to memory the Koran and certain *siparas*, without understanding what they mean.

English School.

53. The English School is held in the Town of Futtehpore, and was established in the middle of 1844. It is supported by private contributions from the European and Native inhabitants. A master

was procured from the Agra College, but his long sickness and absence reduced the School to a very low state of discipline, and the attendance has decreased from 70 or 80 to 37, or including absentees, to 47. Notwithstanding these disadvantages a tolerable examination was passed a few months ago by many of the pupils, whose papers, especially in the Oriental department, were in some measure satisfactory. Seventeen boys study only Oriental languages, and six confine their attention to English; while fourteen endeavour to compass both branches of education. The School-house is at present situated in a building in the Collector's office compound, which was repaired for the purpose: this is probably too far removed from the Town, in the vicinity of which, if a commodious School-house were erected, the attendance would probably be greatly increased.

Government solicited to extend their patronage to the School.

For such an institution, a well qualified head master is indispensable: neither the Committee nor their Secretary have leisure to afford any continuous or effective superintendence, and without an intelligent and properly trained teacher, no permanent regularity, no judicious classification, nor any steady effort and well directed study can be calculated upon. The field is one of hope and interest: there are no Government Schools for above 70 miles on one side, and 50 on the other, and Futtehpore is the centre of a densely peopled country. If the assistance of Government could be so far vouchsafed as to supply a well paid and efficient teacher, there is every reason to expect that the result would justify such an extension of patronage. On account of the difficulty found in procuring a Christian teacher, Christian instruction was, from an unhappy necessity, not included in the course of instruction, and the seminary would therefore receive no further injury on this score, from its connexion with Government.

General remarks upon the state of education in Futtehpore.

54. Before concluding this report, I beg to offer a few remarks on the general state of education in the District. The 362 Schools are very widely scattered, for they are situated in no fewer than 217 different villages, which is above one-fifth of the entire villages of the District. In estimating the proportion of children under education, I am willing to include the absentees, which swell the number to 3,030.

Proportion of children of a School-going age.

The population of the District, according to the detailed statement formerly given, is 3,80,000. I should be disposed to place it higher than this, probably at not less than 4 lacs: but that the calculation be as favourable as possible, let the lower number be taken. To follow the European tables, as applied by a writer in the *Calcutta Review*,* eleven-thirtieths of the entire population, or 1,39,365, are under 14 years, and of these, one-half, or 69,682, are of a School-going age: this would give the proportion of

And of children actually instructed.

children actually under tuition at 4·35 per cent. But the age of 5 years, assumed by the reviewer, appears too early: in the Hindee Schools, which include the majority of the pupils, 7 years, as has been

Reasons adduced why this average is too low: and why it ought to be increased by contracting the School-going age.

already shown, is the general age for commencement, which is postponed occasionally till 8, and oftener till 9: the *average* age of entrance would thus fall a little below 8 years. If the statements in paragraphs 14 and 34 be consulted with the remarks which accompany them, it will be seen that the age at entrance in *both* Persian and Hindee Schools approach closely to this conclusion. The following *general* average includes, and is much increased by, the advanced age of the Sanskrit scholars:—

		Years.	*Months.*
Age of pupils	at entrance, ...	9	3
	at leaving, ...	16	5

The considerations which I formerly advanced will tend to lower *both* of these periods, and to make them approximate to the European data of 7 and 14 years:—at all events they correspond with extraordinary closeness in *the period spent at School*, which is in both instances *seven* years. We may therefore safely adopt the European proportion of *three-sevenths* as more nearly indicating the number of children of a School-going age than *one-half*. The children of that age in Futtehpore will thus be reduced to 59,728, and the proportion of those enjoying means of education to 5 per cent. However insignificant this proportion may appear, and especially when the wretched nature of the education for

* In an article upon Mr. Adam's reports.

the most part imparted is borne in mind, it is not less than appears to prevail in this quarter of the country.

55. In estimating the extent of education throughout the whole community, a small addition ought to be made for *domestic* instruction, especially where, as in the case of the putwaree, an hereditary office exists which requires the ability to read and write. This addition, however, would not, I apprehend, make any important change in the results already stated, because this species of education is very limited, and has actually in many cases, where it assumes an open and regular form, been included in the present returns. Domestic education.

56. The relative position of the different Schools is precisely the same here as has been described in Mr. Adam's report. The study of Persian and Arabic are the only two distinct branches which are taught in the same School, and of which the one is sometimes employed as a step towards the other. The study of Hindee in three of the Sanskrit Schools is a curious phenomenon, which I regret I had not an opportunity of inquiring more closely into. The different branches how related to one another.

57. Having examined in such detail the constitution of these Schools, it may be thought incumbent upon me to state how far the facts now elicited appear to warrant the hopeful application of the means by which it is proposed to elevate their character: and such remarks appear to be invited by the tenor of the Hon'ble the Lieutenant Governor's instructions. How far these particulars affect the means proposed for elevating the character of the Schools.

About 60 per cent. of the scholars of every description belong to the *Hindee* Schools: and if these can in any way be worked upon, it is obvious that the effect produced will be singularly great, both from the numerical proportion of the scholars themselves, and from the low standard of their acquirements, compared with those of the other two great branches of students. Even the smallest advance will here be invested with the most important character, and fraught with the largest amount of benefit. Peculiar advantages of any effect produced upon the Hindee Schools.

In the whole of this class of Schools then, we have, as the elements to work upon, the faculty of reading and the power of calculation; while there is no indisposition, but entirely the reverse, to accept of and profit by our assistance. In this state of things we require only to secure the attention and to awaken a desire of knowledge, in order to introduce the perusal and study of those books and subjects which may be deemed most beneficial. To begin, then, with that which most closely affects their interests, as it will enable them to watch over and preserve their rights and possessions, appears to be the surest mode of reaching these objects. Accordingly I found everywhere to prevail, a considerable degree of curiosity regarding the Government school-books, and a desire to possess them, which I have little doubt will lead to their being extensively purchased and introduced into the Schools, when offered in the *Nagree* character. As it was I had numerous applications for those printed in the Persian type, (the only ones which reached me before I left the District), and I distributed, I believe, nearly fifty copies, chiefly to zemindars, who purchased them for their children. Should these elementary books find their way generally into the Schools, there is no reason for despairing that a continuation of such works, gradually advancing to general subjects, and embracing in more elaborate compositions a wider range of knowledge, should not also obtain access, and give to the Native institutions of the country a new and hopeful character. It will, no doubt, be a work of time, but it need not on that account be the less sure and satisfactory.

58. The introduction of such a system, and by such means, into the Persian Schools, appears a more problematical and difficult matter, for it would probably be less easy to stimulate curiosity or supply subjects of interest in Schools which are already supposed by those who frequent them to teach everything that is required. Besides, the style and ideas of the School are adverse to anything we can give them. Accustomed to the measured and responsive cadence of Persian verse, to the turgid and metaphorical language of the prose, and to the laconic dicta of the didactic writers, the Persian pupils look with contempt upon the inelegant idiom and cumbrous construction of Hindoostance composition, Difficulties of working upon the Persian Schools.

in which the simple realities, which we should probably be anxious to communicate, would appear still more despicable. The style of these authors presupposes, as well as forms, a peculiar cast of mind in the School which adopts them. Whether this be a natural turn of mind, or, as Mr. Adam imagines, "has been unnaturally forced by the practice of Government," it now, at least presents itself as a national feature, both in the Hindoo and Mahomedan student of the Persian School.

It would hence be a matter of extreme difficulty to bring them to recognize and adopt the Vernacular tongue as a medium of instruction: at all events, the present set of books are too destitute of a literary character to attract the Persian scholar. It is possible, indeed, that elaborate and interesting works in a high and finished style and embracing subjects of national interest,* if suited in matter, composition, and appearance, to the tastes of the teachers and scholars, and offered at low prices, would prove acceptable. It is not, however, to be expected that any books, however well executed, except in the Persian language, would meet with a cordial reception, and it would, therefore, appear advisable, to furnish the Persian Scholars with sets of the school-books in their favourite idiom, if it be wished to secure for them an extensive introduction into the Schools.

Sanskrit and formal Arabic Schools.

59. The other descriptions of Schools are of a more impracticable and less hopeful character. We are, however, perhaps too much in the habit of regarding them *merely* as the means of perpetuating idolatrous practices and a delusive superstition. From the Schools of formal Arabic, indeed, in which the bare repetition of the Koran is practised, there can be little hope of extracting any good, for the extent of mental exertion in the mere mechanical reading and recitation of words of unknown meaning cannot afford much room for the introduction of extraneous knowledge, besides, that the bigotry and pride of the Mahomedans would reject any intrusion into their sacred domain. Among the Sanskrit Schools too, a few seem devoted entirely, or almost entirely, to the acquirement of the forms of sacrificial rites and social observances, but the great majority embrace a much wider range, and present intellectual powers so exercised in abstruse studies as to afford material for the introduction of knowledge of a more profitable description. That the spirit of these Schools would not be entirely adverse to such an innovation, may be gathered from Mr. Adam's concluding remarks on Sanskrit Schools, and from the fact that there are occasional instances of Hindee being taught along with Sanskrit. Many of the pundits, whose institutions I visited, expressed their readiness to introduce Hindee or Oordoo into their Schools, and seemed to appreciate the vast importance of such a measure as affecting the whole body of the people, who are not to be reached through the medium of a learned language.

Notices a report which was current in the District.

60. In conclusion I beg to mention a circumstance, which I ought, perhaps, to have done at first. At the commencement of the investigation, the tehseeldars and their subordinates often found the greatest difficulty in obtaining information regarding the Schools, and upon inquiry discovered the unwillingness of the people, to originate in a report which seems completely to have pervaded the District. It was rumoured that four Christian missionaries, whom the Oriental imagination of the inhabitants invested with the character of magicians, had come from Benares, and that one of them, in the garb and appearance of a mendicant, would visit their houses and stretch a magic wand over the heads of their children, who smitten with the witchcraft would follow instinctively the foreign enchanter, desert their homes, and become Christians. How absurd soever this fiction may appear, it is certain that it spread such a terror abroad, that the Schools were in some places deserted, and mothers concealed their children from very fright; the conjurers were reported to be in every village, and the very tehseeldaree

---

*Such for instance as historical passages in the lives of the most favourite national characters, something in the attractive style of the "Tales of a Grand-father," any popular and agreeable work on law or other subject affecting the interests of the Persian scholar, or opening prospects of employment, would probably be introduced into the Schools. The success of epistolary compositions and other works which assist in giving capacity for business, is a useful guide to the *kind* of works which would readily be received, and the kind of works which would create a demand.

mohurirs were transformed into the moonshees and pundits of the missionaries, and avoided as their emissaries. By the judicious management of the tehseeldars, confidence was soon restored; and I met with only one instance in which permanent injury was sustained, the teacher having removed meanwhile to another village.* Whatever suspicion remained was dispelled when I personally visited the Schools, and I have reason to believe that upon the whole the effect of the investigation, of the visits of the tehseeldars and their subordinates, and of the countenance I was able in some instances myself to afford, has been to enlarge the number of scholars, if not to increase the number of Schools, especially of *Vernacular* ones. Most of the influential land-holders seemed perfectly to appreciate the motives of Government, and to be anxious in every way to forward them. I requested them, as well as the tehseeldars, to be particular in impressing the people with a sense of the evils of the present system of change and interruption, and the necessity and advantages of steady and continued instruction.

As I have not at hand the conveniences of an office, I beg that the Collector of Futtehpore may be furnished with a copy of this letter for record in his office, and of the statements also if necessary.

I have the honor to be,
SIR,
Your most obedient servant,
W. MUIR,
Late Offg. Collector of Futtehpore.

On the Ganges near Patna, the 12th January 1846.

* I found the same rumour to prevail in Pergunnah Kurrah, Zillah Allahabad, but had not an opportunity of tracing it further in the adjacent Districts. I heard of a similar report at Ghazeepore, but not in connexion with the School investigation.

APPENDIX No. XX.
